Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, and size of establishments.

Subsection 1.—Capital Employed

The collection of statistics on capital invested in manufacturing industries was discontinued in 1944. However, figures for each year from 1917 to 1943 are given in Table 1 of this Chapter, and by provinces for significant years of the same period in Table 2. A table showing the forms of capital employed for certain years from 1924 to 1943 is given at p. 417 of the 1946 Year Book.

Subsection 2.—Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production, tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1925 and subsequent to 1930. Table 15 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the Second World War the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more to employ unskilled workers. The decline in the efficiency of production during the war years may, therefore, be attributed to this cause as well as to absenteeism for various causes.

15.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-45.

(1935-39=100)

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Monthly Record of Employment in Manufactures.—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospect of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and

the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in August, 1943, when 1,067,890 wage-earners were employed, an increase of 96.4 p.c. over the same month in 1939. The highest employment during 1944 was attained in June when 1,049,557 wage-earners were employed. From then on employment declined steadily to the end of 1945 when 819,619 wage-earners were reported. This compares with an employment of 961,820 wage-earners in December 1944 and 1,021,630 wage-earners in December 1943.

Hours Worked by Wage-Earners.—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1945, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 17 to 20 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48·9 in 1932 to 47·2 in 1939, and reached 50·6 in 1941, some of the increase no doubt being due to the inclusion of overtime. Since then there was a counter movement in the hours worked, especially among females, due to the employment of many workers on a part-time basis. Whereas in 1939 there were only 2·8 p.c. of male and 5·3 p.c. of female wage-earners working under 30 hours per week, in 1944 these percentages rose to 5·3 and 12·5 respectively. Since the end of the War the normal working week has been dropping steadily. In 1945 average hours per week for male wage-earners totalled 47·6 and for females 42·7. Female wage-earners worked on an average 4·9 hours less than their male co-workers. Table 1 of the Labour Chapter, p. 631, shows the changes that have taken place in the employment of women in industry and certain services from 1942 to 1947.

17.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours¹ per Week in the Month of Highest Employment, 1938-45

NOTE.—Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Canada Year Book; in 1940 at p. 392 of the 1943-44 edition.

Subsection 3.—Salaries and Wages in Manufacturing Industries

In 1945 the 29,050 establishments covered employed 190,707 salaried employees and 928,665 wage-earners, a total of 1,119,372 persons. Out of every 1,000 persons employed in manufacturing 170 were classed as salary-earners and 830 as wage-earners; the former earned 22.6 p.c. and the latter 77.4 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 55.8 p.c. of average annual salaries, in 1943 the percentage rose to 75.8 and declined to 70.0 in 1945. This tendency towards equalization was, in part, due to the controls adopted by the Government which tended to stabilize salaries more than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries, and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada in 1945, 34.8 p.c. were found in the textile group. Normally, the percentage is much higher. During the War large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1945 amounted to \$2,191 which was \$445 or 25.5 p.c. higher than in 1939. Salaried employees in Ontario with \$2,273 received the highest salary. Quebec was second with \$2,190, British Columbia third with \$2,170 and Manitoba fourth with \$2,026. The fact that head offices of many large corporations are located at Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

¹ For statistics of annual earnings of wage-earners, by sex, see Table 24.

The average wage in 1945 amounted to \$1,538 which was \$563 or 57.7 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wages of \$1,765 per annum, followed by Ontario with \$1,577, Nova Scotia \$1,519, Manitoba \$1,464, Quebec \$1,463, Alberta \$1,452, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 21, and for a subdivision of wage-earners by sex, see Table 24.

Average Annual Earnings in the Forty Leading Industries.—In only eleven industries did average salaries exceed \$2,500 in 1945; breweries, pulp and paper, automobiles, primary iron and steel, men's factory clothing, petroleum products, acids, alkalies and salts, brass and copper products, silk and artificial silk, women's factory clothing, and railway rolling-stock. In twenty-three they ranged between \$2,000 and \$2,500, in four they ranged between \$1,500 and \$2,000 and in the remaining two they were below \$1,500. The lowest salaries were reported by the sawmilling, butter and cheese and bread industries, each of which includes a large proportion of small establishments.

The highest annual wages, those above \$1,900, were paid in ten industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$2,365 was the highest in this group, followed by aircraft with \$2,211, bridge and structural steel \$2,062, shipbuilding \$2,046, railway rolling-stock \$1,986, acids, alkalies and salts \$1,946, miscellaneous iron and steel products \$1,943, non-ferrous metal smelting and refining \$1,928, petroleum products \$1,918, and primary iron and steel \$1,907. In twelve other industries average wages ranged between \$1,600 and \$1,900 in all of which the proportion of female workers is low. In fourteen other industries average wages ranged between \$1,100 and \$1,600, while in the remaining four they were below \$1,100. The latter group includes industries made up of a large number of small establishments, in these the proportion of female workers is high. Fruit and vegetable preparations, hosiery and knitted goods, biscuits, confectionery, cocoa, etc., and leather boots and shoes are the industries included in this group. Employment by sex and average annual earnings in the forty leading industries is given in Table 22, and the annual earnings by sex in Tables 25 and 26.

22.—Salaries and Wages Paid in the Forty Leading Industries, 1945, with Comparative Figures of Average Salaries and Wages Paid in 1944

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 25 and 26.

Average Annual, Weekly and Hourly Earnings.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different from that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 21 and 22 will be of value to the student.

The figures given in Tables 23 to 26 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the

different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$35.04 in 1945, an increase of \$12.81 or 57.6 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 73.6 cents in 1945, an increase of 59.3 p.c. Annual earnings at \$1,739 were 61.6 p.c. higher.

Female wage-earners received on an average \$19.84 per week in 1945, an increase of \$7.06 or 55.2 p.c. as compared with 1939. Hourly earnings at 46.5 cents were 64.3 p.c. higher, while annual earnings at \$984 were 59.0 p.c. higher.

¹ Butter and cheese factories and fish-curing and -packing plants are excluded in the years 1938 to 1945, while sawmills are also excluded in 1945. By including sawmills, weekly earnings in 1945 would have been about \$34.35 for male wage-earners. ² Not available. ³ Estimated on the basis of hours worked by female wage-earners in 1938 and 1939 as compared with those worked by male wage-earners in those years.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of “real” wages is obtained. Index numbers for 1934 to 1945 are given in Table 27. In 1933, the height of the depression, real wages were 88·3 on the 1935-39 base. From then on they rose steadily and stood at 141·1 in 1944, an increase of about 60 p.c. In 1945 real wages dropped to 138·1.

27.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1934-45

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1933 are published at p. 421 of the 1939 Canada Year Book.

Percentages of Salaries and Wages to Net Value of Products.—Table 28 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 172 p.c. during the period 1924-45 while wage-earners increased 122 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production amounting to \$2,033,263,998 since 1939, \$1,107,962,296 or 54.5 p.c. was passed along in increased salaries and wages.

28.—Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1933-45

¹ Equivalent to "net value of products"; Table 1, p. 522, see footnote 1.

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,376 in 1944 and their output was about 75 p.c. of the total value of manufactures. With the end of the War and the consequent decline in production of the huge war plants the number of establishments with a production of \$1,000,000 or over, although increasing to 1,384 in 1945, nevertheless saw a decline in the proportion of their output to 71 p.c. of the total.

Size as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage

having dropped in 1933 to 20.5 (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at 25.6. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58.6 p.c. of the total, in 1929, 61.9 p.c., in 1933, 55.7 p.c., in 1939, 61.5 p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25.6 p.c. of the total number of employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47.0. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. All told there were twelve plants employing over 7,000 persons. The largest one had an employment of a little over 13,000 with the next three largest employing between 9,000 and 10,000. Three other plants employed between 8,000 and 9,000 persons while the lowest five plants in this group employed between 7,000 and 8,000 workers.

In 1945 the size of manufacturing establishments declined. The largest ones, viz., those employing 1,500 and over, numbered only 80 as compared with 100 in 1944. Also the largest manufacturing plant in Canada which employed over 13,000 persons in 1944 employed slightly over 9,000 employees in 1945. The second largest establishment had 7,000 employees; other plants ranged as follows:—

Size of Establishment in Leading Industries.—Table 32 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low.

32.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1945

PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This part of the Chapter is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1945 amounted to \$6,496,973,000 or 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.4 p.c. of the gross production compared with 35.6 p.c. for Ontario and 34.8 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin.

¹ Includes non-ferrous metals. ² Includes iron and its products, non-ferrous metal products, non-metallic mineral products, and miscellaneous industries.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec 44.0 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees as compared with 39.9 p.c. for Canada as a whole. Ontario ranked second with 40.5 p.c., followed by Nova Scotia with 37.7 p.c., British Columbia 36.5 p.c., Manitoba 28.7 p.c., New Brunswick 28.4 p.c., Alberta 20.1 p.c., and Saskatchewan 14.8 p.c. There were no plants in Prince Edward Island with an employment of 500 persons.

2.—Concentration of Manufacturing Production in Each Province, 1945

Section 1.—The Manufactures of the Maritime Provinces, 1945

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and -packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and -packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock are also important branches.

¹ Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island: slaughtering and meat packing, planing mills, fertilizers, cotton and jute bags; in Nova Scotia: cotton yarn and cloth, aircraft, miscellaneous iron and steel products, wire, coke and gas, and petroleum; in New Brunswick: sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods and veneer and plywoods.

Section 2.—The Manufactures of Quebec, 1945

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec, with about 31 p.c. of the Dominion output in 1945, was the second largest manufacturing province. The production of pulp and paper again occupied the premier position which was held during 1943 and 1944 by miscellaneous chemical products and non-ferrous metal smelting and refining. In addition to accounting for about 8 p.c. of the gross value of Quebec manufactures in 1945, the pulp and paper industry furnished about 50 p.c. of the Dominion total for this industry. The value of tobacco products totalled approximately 89 p.c., cotton yarn and cloth 74 p.c., women's factory clothing 67 p.c., leather boots and shoes 66 p.c., men's factory clothing 60 p.c. and railway rolling-stock 53 p.c. of the Dominion totals of these products. Quebec is thus an outstanding manufacturing province by reason of her large individual industries and not so much on account of a great diversification of manufacturing activity.

Section 3.—The Manufactures of Ontario, 1945

The gross value of the manufactured products of Ontario in 1945 represented about 48 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 31 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania, U.S.A. are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50.5 p.c. In 1945, the percentage dropped again to 48.2, thus indicating a relatively greater expansion of war production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this Province is pre-eminent are those of automobiles, agricultural implements, starch, bicycles and carpet manufacture which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1945, are as follows: abrasives 89, leather tanneries 86, rubber goods 85, miscellaneous non-ferrous metal products 83, cordage, rope and twine 80, soaps and washing compounds 80, woollen yarn 76, salt 73, clay products from imported clay 72, electrical apparatus and supplies 71, primary iron and steel 68, aluminum products 67, toilet preparations 65, coke and gas products 62, iron castings 61, fruit and vegetable preparations 57, flour and feed mills 56, medicinal and pharmaceutical preparations 55, glass and glass products 55, monumental and ornamental stone 54, acids, alkalies and salts 54, hosiery and knitted goods 54, and furniture 53.

5.—Principal Statistics of the Leading Industries of the Province of Ontario, 1945

Section 4.—The Manufactures of the Prairie Provinces, 1945

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of

the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1945, amounting to \$240,746,043, followed by flour and feed mills with \$74,977,845, butter and cheese \$52,918,011 and petroleum products \$39,976,131. These four industries accounted for about 54 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: railway rolling-stock, breweries, miscellaneous foods, bread and other bakery products, sawmills, etc.

¹ Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba, bridge and structural steel, non-ferrous metal smelting and refining and pulp and paper; Saskatchewan, non-ferrous metal smelting and refining, miscellaneous iron and steel products, bags, cotton and jute, and wood preservation; Alberta, cement, miscellaneous iron and steel products, wood preservation, malt and malt products, sugar refineries, acids, alkalies and salts, and cheese processed.

Section 5.—The Manufactures of British Columbia, 1945

British Columbia with a gross value of production of \$628,903,124 in 1945 was again the third most important manufacturing province in the Dominion. About 17 p.c. of this amount; viz., \$104,972,850 was contributed by the sawmilling industry. Shipbuilding with a value of production of \$82,125,280 was in second place. This industry, which occupied first place during the war years was an important factor in British Columbia's manufacturing operations. At the height of its productive effort in 1943 it employed 31,238 persons who were paid \$64,939,484 in salaries and wages, while the value of production reached the unprecedented figure of \$155,536,396. In spite of its decline, the shipbuilding industry in 1945 was still the largest employer of labour and also paid out the highest amount in salaries and wages. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked first with a gross value of production of \$104,972,850, and the pulp and paper industry fourth with \$35,304,731. Third in importance was fish-curing and -packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 47 p.c. of the total production of this industry in Canada. Other important industries are: slaughtering and meat packing, fruit and vegetable preparations, petroleum products, fertilizers, butter and cheese, etc. The varied resources on the Pacific Coast have resulted in a wide diversification of manufactures.

¹ Includes: aircraft, distilleries, non-ferrous metal smelting and sugar refining.

Section 6.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there.

8.—Cities and Towns Each with a Gross Manufacturing Production of Over \$1,000,000, Number of Establishments and Total Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1945.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form, in Table 10 without disclosing the operations of individual establishments.

Province	Urban Centres with a Gross Production of over \$1,000,000 each	Establish- ments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Per- centage of Total Pro- duction in each Province

Table 9, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1945 accounted for 89.9 p.c. and 91.5 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 70.4 p.c. and 76.2 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

9.—Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities of Canada, 1933-45

NOTE.—The dyeing, cleaning and laundry industry is included for the years prior to 1936.

CHAPTER XVII.—CONSTRUCTION

CONSPECTUS

	PAGE		PAGE
SECTION 1. THE GOVERNMENT AND THE CONSTRUCTION INDUSTRY.....	603	SECTION 2. CONSTRUCTION OF DWELLING UNITS IN CANADA.....	607
Subsection 1. Public Contracts.....	603	SECTION 3. CONTRACTS AWARDED AND BUILDING PERMITS ISSUED.....	609
Subsection 2. Government Aid to Civil Housing.....	604	SECTION 4. ANNUAL CENSUS OF CONSTRUCTION.....	614

The purpose of this Chapter is to co-ordinate such official statistics on the construction industry as are available and to give, so far as possible, a complete picture of construction from year to year. Official statistics, although constantly undergoing improvement, have many gaps and it is necessary to try to bridge these by presenting data from outside sources. For instance, Section 3 carries official figures of building permits issued in leading cities. These figures are useful but have definite limitations and are supplemented by presenting data from outside sources. This Section also contains data from a private source on construction contracts awarded during specified years. These are in the nature of a forecast of the amount of construction work contemplated in a given year. It is usually some time after contracts are awarded that work actually starts and, in the case of contracts of large-scale undertakings, the work is seldom finished within one year.

On the other hand, the official statistics of the annual Census of Construction given in Section 4 cover work of all kinds actually completed in a given year but even the Census of Construction is not all-inclusive. Work done by farmers, which in the aggregate must be considerable, is not included nor is much of that done by railways and other public institutions. So far as the latter groups are concerned an attempt is made in Section 4 to calculate a net figure which, when added to the annual Census of Construction figure, will more nearly approximate total construction (except that done by farmers and other individuals for themselves).

Section 1.—The Government and the Construction Industry

Subsection 1.—Public Contracts

Previous to the Second World War, Federal Government contracts were let and put into execution by the Department of Public Works. During the War, the Department of Munitions and Supply was organized to co-ordinate the industrial effort and arrange priority for such industries as were engaged on important war work. After 1946, the Department of Munitions and Supply gave place to the Department of Reconstruction and Supply and since that date Government reconstruction programs, so far as they concern construction projects, have been screened by this body which works in close co-operation in this matter with the Department of Public Works and other Federal Departments concerned. This ensures the initiation of only those new projects which do not interfere with more necessary construction in progress or contemplated, and where availability of labour and materials permits.

Following the Government's announcement in November, 1947, of stringent measures for the conservation of its dollar resources, all Government Departments have been obliged to report in detail to the Department of Reconstruction and Supply their probable purchases of materials, machinery, or equipment from the United States.

Subsection 2.—Government Aid to Civil Housing*

Canada's supply of adequate housing in 1947 falls far short of actual needs. While this condition undoubtedly existed prior to 1930, it was not widely recognized. With the general depression of economic activity through the period 1929-36, residential construction fell to such a low level that already-existing overcrowding and obsolescence were further aggravated. The high vacancy rate in these years, particularly for apartment dwellings, was a product not of an over-supply of dwellings, but of enforced "doubling-up" of families whose incomes were not sufficient to provide separate living quarters.

The construction industry had not recovered from this slump when in 1939 war production began to drain off materials and labour required for wartime housing construction. During the war years, increased personal income allowed many families to expand into separate or larger dwelling units. These two factors, coupled with unprecedented high marriage rates during the war years and months immediately following, compounded an already critical shortage of living quarters throughout the Dominion.

The tempo of total residential construction, including Government projects, has increased steadily from 1945 to 1947. In 1947, for the first time since 1939, the number of new dwelling units exceeded the net increase in the number of households. Dwelling units constructed numbered about 77,000 as compared with a net increase of 64,000 in the number of families, leaving 13,000 units available to reduce over-crowding.

The Central Mortgage and Housing Corporation.—To provide co-ordination in the housing field, the Central Mortgage and Housing Corporation was incorporated by an Act of the Twentieth Parliament (December, 1945). Briefly, its purpose and functions are: (1) to administer the National Housing Act, 1944, and earlier housing legislation; (2) to provide facilities for the rediscounting of mortgages by lending institutions; and (3) to administer the Emergency Shelter Regulations.

In January, 1947, the Corporation assumed supervision of the activities of Wartime Housing Limited, a Crown Company formed in February, 1941 (see pp. 582-583, 1947 Year Book).

Up to the time of the transfer of the Wartime Housing Limited, to the Central Mortgage and Housing Corporation the number of houses completed during the years 1941-47, by the former, was 31,151.

By provinces the numbers were: Nova Scotia 2,336; New Brunswick 1,091; Quebec 4,172; Ontario 14,817; Manitoba 1,722; Saskatchewan 1,455; Alberta 1,439; and British Columbia 4,119.

* Revised under the direction of C. M. Isbister, Chief Economist, Central Research and Development Division, Dominion Bureau of Statistics, by A. B. McMorran, Chief, Housing Statistics.

In September, 1947, the Corporation also became responsible for the management of Housing Enterprises of Canada, Limited, and its operating companies. Thus, by the end of 1947, a single organization, the Central Mortgage and Housing Corporation, was administering most of the housing activities of the Federal Government.

Housing Legislation.—Since 1935, the Federal Government has administered legislation designed to assist in the financing and improvement of housing in Canada. This commenced with the Dominion Housing Act, 1935 (see pp. 473-474, 1938 Year Book), and has been followed by the Home Improvement Loans Guarantee Act, 1937 (see pp. 370-371, 1941 Year Book), the National Housing Act, 1938 (see pp. 469-470, 1940 Year Book) and the National Housing Act, 1944, under which current activity is authorized.

The following table shows the number of loans made, and the amounts approved under the housing legislation passed since 1935.

1.—Numbers and Amounts of Loans Approved Under Dominion Housing Legislation, by Provinces, 1935-47

NOTE.—This table is a combined statement of the net loans (cancellations and new loans) made under the three Acts named in the preceding text.

National Housing Act, 1944.—The features of this Act as originally proclaimed appear on pp. 455-457 of the 1946 Year Book. During 1947, amendments were made to the Act for the purpose of assisting individuals with moderate and low incomes to purchase homes, encouraging the construction of rental housing, and assisting in the construction of rural housing. An outline of the present status of the Act is given on pp. 606-607.

Loans to Prospective Home Owners.—Loans are extended through approved lending institutions with the Federal Government advancing 25 p.c. of the total. The Act has been amended to provide for loans payable over a period up to thirty years with the amount based on a maximum of 95 p.c. of the first \$3,000, 85 p.c. of the second \$3,000, and 70 p.c. of the remainder of the lending value when the purchase price is predetermined and approved by the Central Mortgage and Housing Corporation. When the latter condition is not met a higher equity is payable. The maximum loan for a single family-dwelling has been increased from \$7,000 to \$8,500.

Integrated Housing.—This plan involves an agreement with a builder to build houses at a controlled sales price for veterans preference. The Central Mortgage and Housing Corporation gives priority assistance and undertakes to purchase houses not sold within six months of the completion date. The provisions governing the size of the loan are the same as for prospective home owners.

Co-operative Housing.—The terms under which loans are made to co-operative groups intending to build housing projects are unchanged (see p. 456, 1946 Year Book). There were no formal applications in 1947.

Rental Housing.—To encourage the construction of rental housing, the Act was amended in March, 1947, to provide depreciation for a period of ten years at double the rates normally allowed for income tax purposes for approved types of dwelling comprising four or more family dwelling units.

Direct Loans.—The Act was amended to enable the Central Mortgage and Housing Corporation to make direct loans for home ownership, rental housing, or rural housing, if, in its opinion, joint loans are not available.

Limited Dividend Companies.—The Act provides for loans to limited dividend companies for the construction of low rental housing. During 1947, one new project was approved. The high level of building costs has deterred the development of low rental housing. During 1947, Housing Enterprises of Canada, Limited, suspended operations because they could not meet the cost levels originally contemplated.

Loans to Primary Producers for Housing of Employees.—Terms remain the same for loans to companies building housing quarters for employees engaged in primary production (see p. 585, 1947 Year Book).

Land Assembly.—The Act was amended in 1947 for the purpose of authorizing approved lending institutions to acquire, improve and sell land for residential purposes. During 1947, four such projects were approved.

Slum Clearance.—Due to the extreme shortage of housing accommodation during 1947, slum clearance projects were not pressed.

Farm Housing.—The section of the Act providing for loans to assist in the construction of rural housing was proclaimed in June, 1947. If there is no existing mortgage or encumbrance upon the farm, the loan is limited to the least of \$5,000, the cost of building the house, or two-thirds of the appraised value of the farm. If there is a mortgage or encumbrance, the loan is limited to the least of \$8,000, the sum of the cost of building the house and liquidating existing indebtedness, or two-thirds of the appraised value of the farm. Loans for new farm housing are repayable, over a period of up to 20 years, at $4\frac{1}{2}$ p.c. per annum calculated semi-annually.

Home Extension Loans.—The purpose of these loans is to enable the conversion of existing homes to create additional self-contained dwelling units. The terms of the loans are the same as in 1946 (see p. 586, 1947 Year Book).

Housing Research and Community Planning.—Research and community planning cover the fields of: economic and statistical inquiries; technical research in materials, equipment, standards, etc.; and design. In 1947, the National Research Council of the Federal Government formed a Division of Building Research to undertake the major portion of actual technical and laboratory research work regarding building methods and materials.

Emergency Shelter Regulations.—This legislation is intended to assist municipalities in converting unoccupied houses, barracks, or other suitable buildings for the accommodation of families suffering actual distress or hardship through lack of shelter. By the end of 1947, 9,618 units were completed or were nearing completion, and 548 were under construction. There are now very few suitable buildings available and activity in this field will be greatly reduced in 1948.

Veterans' Land Act.—A program, under the terms of this Act, includes construction of homes on small holdings outside urban areas. The project is the responsibility of the Minister of Veterans Affairs. (See also Chapter XXIX on Veterans Affairs.)

Farm Improvement Loans Act.—This legislation aims at the improvement of living conditions on farms by the provision of electrification, refrigeration, heating systems, water systems, etc. The Act is more fully dealt with in Chapter X on pp. 345-346.

Section 2.—Construction of Dwelling Units in Canada

It is estimated that 76,738 new dwelling units were completed during the calendar year 1947 an increase of 9,423 over the total for 1946. This brings completions during the years 1945-47 to almost 200,000 units. At the end of 1947 there were over 42,000 dwelling units under construction in Canada.

During 1947, about 33 p.c. of completed dwellings were built in metropolitan areas. Approximately 76 p.c. of all completions were single houses. The following tables summarize the results of surveys conducted by the Dominion Bureau of Statistics.

2.—New Dwelling Units, by Areas or Regions, Completed in 1945, 1946 and 1947

Section 3.—Contracts Awarded and Building Permits Issued

In this Section, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously, these statistics and those of Section 3 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards large contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 3 and are valuable as showing from year to year the work immediately contemplated during the period.

Construction Contracts.—The figures published by MacLean Building Reports, Limited, for construction contracts awarded during 1947 showed a total of \$718,137,100. This amount represented an increase of 8.3 p.c. over the \$663,355,100 reported for 1946 and 24.5 p.c. over the high pre-war level (\$576,651,800) established in 1929.

Of the four main classes of construction shown in Table 8 business and engineering showed increases of 28.2 p.c. and 34.1 p.c., respectively, over those of 1946; residential and industrial classes on the other hand showed decreases of 7.4 p.c. and 18.0 p.c., respectively.

Regionally, Ontario accounted for the greatest volume with total awards of \$258,709,300, or 36.0 p.c. of the total, followed by Quebec with 35.5 p.c. The greatest percentage increases over 1946 were shown by Prince Edward Island and Nova Scotia. British Columbia was the only province showing a decrease.

Building Permits.—Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 it was extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the urban centres in which they earned their living. In 1940 the series was again extended to cover 204 municipalities. The number of urban centres included is being expanded further. However, until plans are advanced it is felt desirable in the Year Book to maintain comparability with earlier issues by retaining the '204' list.

Building permits issued in 1947 registered a decrease of 2.7 p.c. compared with 1946,

9.—Values of Building Permits Issued by 204 Municipalities, 1946 and 1947

NOTE.—Statistics for these series covering years previous to 1946 will be found in the corresponding table of earlier editions of the Year Book. For the 35 cities marked • the record goes back to 1910; the 23 places marked ○ were added in 1920.

The indexes given in Table 10 show, so far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, the result of a special study made in 15 cities, indicates that the average proportions of materials to labour in all kinds of construction were about two-thirds for the former to one-third for the latter. The increase in the cost of building operations during the war years has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities, Montreal, Toronto, Winnipeg and Vancouver, accounted for \$121,982,549 or 32.7 p.c. of this total. In 1929 the same cities showed a value of \$126,387,555.

10.—Values of Building Permits Taken Out in 204 Cities and Index Numbers of the Building Construction Industries, 1940-47

NOTE.—These 204 cities are named in Table 9.

Year	Value of Building Permits 204 Cities	Average Index Numbers of— (1926=100)

¹ Compiled by the Department of Labour.

² As reported by employers.

Trends of Employment and Aggregate Wages Paid in the Construction Industry.—In Tables 11 and 12 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1946, was August with 195,793 wage-earners and the lowest was February with 112,176.

Section 4.—Annual Census of Construction

The annual Census of Construction as taken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken throughout Canada by contractors, builders and all public bodies with the exception of smaller municipalities. It also includes work done by the maintenance and repair crews of industrial plants, mines, electric power companies and commissions, etc., in organized communities where building permits are required. However, construction and repair work done by farmers and other individuals on their own structures is not covered. Further, construction of railway-roadbed, maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities is not included when such work is done by the employees of these concerns in the ordinary way. The following table shows the expenditures by steam and electric railways, telegraph and telephone systems with the elimination wherever possible of items which are not germane to construction, such as snow, ice, and sand removal, dismantling of property, depreciation and retirement charges. By subtracting the work sublet to contractors from the expenditures, duplication with the Census of Construction figures is eliminated. Finally, by adding to the figures the totals given by the Census of Construction a total is obtainable which closely approximates over-all construction with the sole exception of work undertaken by farmers and other individuals for themselves.

¹ Revised.

² Not available.

³ Exclusive of railway-owned systems, included above.

⁴ Represents approximate total of all construction with the exception of work undertaken by farmers and other individuals for themselves.

Statistics of Construction.*—A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that, with the completion of the 1946 figures, comparable statistics are now available covering the years 1935-46. Returns are received from general trade and subcontractors, municipalities, the Harbours Board, and Federal and Provincial Government departments. The figures cover alterations, maintenance and repairs, as well as new construction. Summary statistics are given in Tables 14, 15 and 16.

No relationship exists between the total value of construction as shown in these tables, and the value of contracts awarded as indicated in Tables 7 and 8 of Section 3, pp. 609-610. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas, the following tables cover construction work carried on and actually performed in the calendar year.

* Revised under the direction of W. H. Losee, Director, Census of Industry and Merchandising Division, Dominion Bureau of Statistics, by F. J. Tanner, Chief, Construction Statistics Section.

14.—Principal Statistics of the Construction Industry, 1943-46

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

Trade construction.....	67,013,833	76,414,317	96,579,586	141,763,126

The value of work performed by the construction industry in 1946 amounted to \$868,661,403 as compared with \$543,579,833 in the preceding year, an increase of 59.8 p.c.

The value of building construction increased from \$288,092,582 in 1945 to \$490,407,540 in 1946. The construction of industrial buildings increased from \$82,800,022 to \$151,305,541 while the construction of armouries, barracks, hangars,

etc., was increased from \$6,445,275 to \$8,769,191. The value of residential building advanced from \$125,524,346 to \$193,626,880, institutional from \$30,449,556 to \$48,623,956, commercial from \$42,873,383 to \$88,081,972. Construction work involving engineering, harbours, rivers, etc., increased from \$158,907,665 in 1945 to \$236,490,737 in 1946.

In the industry as a whole, employment was provided for a total of 198,851 persons in 1946, recording an increase of 52,321 over the total for the preceding year, while the aggregate of salaries and wages at \$344,893,057 was \$110,901,603 higher. The cost of materials used in 1946 was \$459,965,741, an increase in expenditure for this purpose of \$184,343,745.

In 1946, reports received numbered 23,793 as compared with 19,025 in 1945. A good part of the increase was recorded in the number of reports received from owner-builders due, in all likelihood, to the number of persons, desperately in need of housing accommodation, who erected their own homes because they were unable to obtain the services of a contractor. These statistics are included in the tables showing the operations of general contractors, trade contractors and subcontractors. Although the increase in the number of reports was considerable, the comparatively small extent of their operations does not appreciably affect other totals.

Table 17 classifies the various types of construction carried out in 1946. The item "Trade Construction" covers such items as bricklaying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to

a specific type of work. Details by provinces and more complete information regarding the industry will be found in the reports of the Bureau of Statistics on the construction industry.

Section 1.—The Government in Relation to Labour

Subsection 1.—The Federal Department of Labour

The Department of Labour of Canada was established in 1900 by the Conciliation Act which provided machinery to aid in preventing and settling labour disputes, and required the Department to collect, compile and publish statistical and other information. The Department assumed, too, the administration of the Fair Wages Policy which was adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At the present time, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister is responsible for the administration of certain statutes: Conciliation and Labour Act; Fair Wages and Hours of Labour Act, 1935; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1946; and Government Annuities Act. The Industrial Disputes Investigation Act, enacted first in 1907, was suspended by the Wartime Labour Relations Regulations.

Fair Wages Policy.—Wages and hours for work on contracts for the manufacture of equipment and supplies for the Federal Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and, to some extent, by an Order in Council of June 7, 1922, as amended Apr. 9, 1924. Hours on such work are limited to eight per day and 44 per week except in an emergency or when declared exempt by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones are determined by the Minister.

* Except as otherwise noted, this Chapter has been prepared or revised under the direction of A. MacNamara, C.M.G., Deputy Minister of Labour, Ottawa.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current, or fair and reasonable and, for men and women over 18 years of age, may not in any case be less than 35 cents and 25 cents per hour, respectively. Where minimum rates fixed by provincial authority are higher than these rates, the provincial rates apply. In both construction and supplies contracts, the term "current wages" and, in the latter contracts, the term "hours fixed by the custom of the trade", mean the standard conditions fixed by agreement between employers and unions or, failing agreement, the actual conditions prevailing.

Wartime Labour Regulations Continued into 1948.—The Wartime Labour Relations Regulations (P.C. 1003) of Feb. 17, 1944, originally based on the War Measures Act, were continued in effect into 1948 by subsequent Acts of the Federal Government. In the meantime, however, the Federal authorities had returned to provincial jurisdiction the war industries originally covered, effective Apr. 1, 1947. Arrangements between the Dominion and the five provinces, which had applied the provisions of P.C. 1003 to industries under their own jurisdiction, for the joint administration of the Regulations within each province, were cancelled on May 15, 1947, except as to certain pending conciliation matters. The five provinces were British Columbia, Manitoba, Ontario, New Brunswick and Nova Scotia.

Accordingly, as of Apr. 1, 1947, the Wartime Labour Relations Regulations applied only to industries ordinarily within the legislative authority of the Federal Parliament, principally navigation and shipping, and interprovincial transport and communications.

Among other things, the Wartime Labour Relations Regulations provide for the clear right to organize by both employees and employers, for the certification of bargaining representatives, and for compulsory collective bargaining in good faith by employers and trade unions. A procedure for instituting collective bargaining negotiations is set out, and provision is made for the mediation of Conciliation Officers and Conciliation Boards. A change of bargaining representatives at the will of the employees affected is permitted after designated periods of time, and conditions relative to the duration and renewal of collective agreements are included. Collective agreements are required to contain provision for the arbitration of disputes concerning their misinterpretation or violation and, where such a provision is lacking, application may be made to the Wartime Labour Relations Board for the establishment of an appropriate procedure. Unfair labour practices are prohibited and the conditions under which strike or lockout action may take place are also specified.

Up to July 31, 1948, the National Wartime Labour Relations Board had certified bargaining representatives in 379 cases, rejecting 135. Between Mar. 20, 1944, and July 31, 1948, of 523 disputes in which Government conciliation services were used, 227 were settled by Conciliation Officers and 180 by Conciliation Boards. In 100 cases no agreement was reached following a Board's report. Other cases are still pending*.

* Detailed statistics of certification and conciliation proceedings will be found in the annual reports of the Department of Labour.

On May 6, 1947, first reading was given by the House of Commons to Bill 338, the Industrial Relations and Disputes Investigation Act, which the Minister of Labour introduced to replace P.C. 1003. The Bill was referred to the Standing Committee on Industrial Relations, which heard extensive representations from spokesmen for organized labour and associations of employers. Later, owing to the heavy legislative program of Parliament, the Bill was withdrawn. It was re-introduced in slightly amended form on Feb. 2, 1948, and passed third reading on June 17, 1948. Through the Continuation of Transitional Measures Act, 1947, an interim extension of P.C. 1003 was made to cover the period from Mar. 31, 1948, to the date of proclamation of the new legislation.

Subsection 2.—Provincial Labour Departments

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respect, the contract of service between employer and employee or the contract between members of a trade union which forms the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. In Alberta the Board of Industrial Relations under the Minister of Industries and Labour administers statutes concerning wages, hours and labour welfare, and the Department of Public Works has charge of factory legislation. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimum-wage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Alberta, Saskatchewan, Ontario, New Brunswick and Nova Scotia, and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed in designated trades to be made legal throughout the trade concerned. The Quebec Collective Agreement Act permits agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces, except Prince Edward Island, are administered by independent boards.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned or to the Deputy Ministers of Labour of the Provincial Governments.

Subsection 3.—Provincial Labour Legislation in 1947-48

Prince Edward Island.—The *Trade Union Act* was amended in 1948 to require trade unions to be registered with the Provincial Secretary and all members of a union to be employees. It also forbids a closed shop contract and the affiliation of a union in the Province with a national or international organization.

Nova Scotia.—The *Trade Union Act* provides for compulsory collective bargaining and for machinery to settle disputes, prohibits discrimination against union members, and requires trade unions to make returns to the Government. The Act also enables the Provincial Government to co-operate with the Federal Government under certain conditions and, if Federal legislation and the Nova Scotia Act are substantially uniform, to enter into an agreement with the Federal Minister of Labour for the employment by the Nova Scotia Government of Federal Government employees and vice versa.

In the revision of the *Fishermen's Federation Act* provisions were added to give collective bargaining rights to deep-sea fishermen who are compensated by a share of the earnings of the vessel.

The revised *Factories Act* omits the section permitting children under 14 years to be employed from July to October in gathering and preparing fruits and vegetables for canning or drying. Working hours for young persons under 16 are limited to eight a day and 48 a week with provision for emergency overtime. Women must wear suitable head covering and no woman or person under 16 may work on any machine without adequate instruction and supervision.

The minimum age for boys underground in coal mines was raised from 16 to 17 years.

Under the *Workmen's Compensation Act* the Board may compensate for silicosis regardless of when the disability arose if it considers it was caused by exposure to silica dust in the Province in an industry within Part I of the Act, under which employers are collectively liable for compensation. Compensation is now payable for epitheliomatous cancer or ulceration of the skin due to handling tar, pitch, bitumen, mineral oil or paraffin.

The minimum rate of \$12.50 per week or average earnings was extended to permanent total disability cases arising before Mar. 29, 1945, when this minimum rate was established. Where the Board has approved an employer's scheme for medical aid it is not liable for such aid except where immediate treatment by a dentist or an eye, ear, nose or throat specialist is required. A further exception has now been made where skilled nursing services are required and authorized by the Board. Compensation to a widow or invalid widower was raised to \$50 a month and a lump sum of \$100 provided. The maximum compensation to consort and children was increased from \$80 to \$90 a month.

In the revision of the law relating to vocational education provision was made for schools for training apprentices under the *Apprenticeship Act*, schools for training teachers in vocational education and the setting up of correspondence study services.

New Brunswick.—An *Act to empower the Crown to take Possession of and Operate Coal Mines Temporarily* provides that where the operation of a coal mine has ceased and the Lieutenant-Governor in Council considers its operation essential to the generation of electric energy by the New Brunswick Electric Power Commission he may take over the mine, temporarily, appoint an administrator, engage workmen and fix their remuneration, and pay compensation to the owner.

Under the *Workmen's Compensation Act*, the amount of average earnings on which compensation is based is now \$2,500 a year.

The *Factories Act* was amended to raise from 14 to 16 years the minimum age for employment in factories, laundries, dry-cleaning establishments, shops, hotels, restaurants, places of amusement and office buildings. The Minister of Labour

may grant exemption from this provision. The Minister may order a medical examination of employees if he believes that they may be affected with an "industrial disease", which includes silicosis, and any other disease declared by Order in Council to be such.

Quebec.—Amendments to the *Workmen's Compensation Act* increased monthly payments to a widow or invalid widower from \$40 to \$45. The minimum to a surviving consort and one child was increased from \$50 to \$55 a month and where there is more than one child from \$12.50 a week to \$65 a month. The maximum amount of earnings on which compensation may be based was raised from \$2,000 to \$2,500 a year.

The *Minimum Wage Act* was made applicable to employees of an employer whose business or residence is in the Province but who either work in and out of the Province or live in the Province and work outside it, provided that they are not covered by another Minimum Wage Act while working outside the Province.

The *Trade Disputes Act* was amended to add provisions relating to disputes between municipal and school corporations and their employees.

The *Professional Syndicates Act* was amended to enable employers to form syndicates under the Act. At least 20 persons in any group seeking to form a syndicate must be Canadian citizens as must all members of the Council and staff.

Ontario.—Amendments to the *Workmen's Compensation Act* increased compensation to a widow or invalid husband from \$45 to \$50 a month, with an increase from \$10 to \$12 a month for each child and from \$15 to \$20 for each orphan child. The minimum monthly payment to a widow or invalid husband is now \$50 or the amount of the workman's earnings, if less, instead of \$45 or earnings. Minimum compensation to a widow or invalid widower and one or more children is now \$62, instead of \$55, irrespective of the amount of the workman's earnings, with a further \$12, instead of \$10 for each additional child unless the total monthly payment exceeds the workman's average earnings when minimum compensation is the amount of such earnings or \$62, whichever is greater. Minimum compensation for temporary total disability was increased from \$12.50 to \$15 a week or average earnings and for temporary or permanent partial disability a proportionate amount. For permanent total disability the minimum payment is now \$100 a month, or average earnings, if less, instead of \$12.50 a week or earnings, if less. From Jan. 1, 1947, a workman injured in an accident happening on or after Jan. 1, 1915, is entitled to medical aid. Heretofore, medical aid has not been payable in respect of a workman injured before July 1, 1917, the date on which the Act first provided for medical aid.

The *Labour Relations Act, 1948* continues the Labour Relations Board set up under the earlier Act, which was repealed, and enabled the Lieutenant-Governor in Council to give effect within the Province, with such changes as he may consider necessary, to legislation of the Federal Parliament which, in his opinion, covers the same field as the *Industrial Relations and Disputes Investigation Act, 1948*.

The revised *Fire Departments Act* contains new provisions for collective bargaining and compulsory arbitration of disputes. Similar provisions were added to the *Police Act* as well as amendments forbidding a member of a municipal police force to remain or to become a member of a trade union or of any organization affiliated directly or indirectly with a trade union. Members of a police force may, however, belong to an association for improving conditions of service, if membership is limited to one force.

Changes in the *Hours of Work and Vacations with Pay Act* enable the employer to determine the period when an employee may take his holiday which may not be later than 10 months after the end of the working year, fix minimum holiday pay at 2 p.c. of pay for the working year, and authorize regulations providing for holiday credit stamps in designated industries to provide for cases where workers move frequently from one employer to another.

Under the *Industrial Standards Act* changes in a schedule of wages and hours as well as the schedule itself must be approved by the Lieutenant-Governor in Council. The requirement that wage rates prescribed by a schedule may not be less, nor hours of work greater, than those prescribed by the *Minimum Wage Act* or the *Factory, Shop and Office Building Act*, or regulations under them, now applies to both male and female workers. The *Hours of Work and Vacations With Pay Act* is added to the list of Acts with which a schedule may not conflict.

Manitoba.—The *Vacations with Pay Act* provides for a week's holiday with pay after a year's service for employees in every industry, business, trade and occupation except farming, ranching and market gardening, and employees of railway and express companies under Federal jurisdiction. The Act includes domestic workers in private houses but excludes independent contractors. It applies to the Crown in the right of the Province and to Government-appointed boards, commissions, associations and similar bodies and to the University of Manitoba.

The *Manitoba Wartime Labour Relations Regulations Act* now provides for continuing in force in the Province the Wartime Labour Relations Regulations (P.C. 1003) in the event of their expiry or their repeal by the Governor General in Council. The Lieutenant-Governor in Council may declare any future Federal Act or Order in Council dealing with labour relations to apply to employers whose undertakings extend across the boundary between Manitoba and another province. Provision is made for an agreement between the Federal Government and the Government of the Province for the administration of any Act or Order declared by the Province to apply in place of P.C. 1003.

Under the *Workmen's Compensation Act*, compensation to a consort is now \$50 a month with \$12 for each child under 16 and \$20 for each orphan child under that age. Other dependents are to receive \$30 per month each with a maximum total payment of \$60. Average earnings on which compensation is based are now \$2,500 a year.

A change in the *Department of Labour Act* provides for a Manitoba Labour Board of three or more members, with equal representation of employers and workers, to replace the Regional Wartime Labour Relations Board.

Gasoline service stations are now covered by the *Shops Regulation Act*, which authorizes early closing by-laws and regulates employment of women and children in shops.

Saskatchewan.—The *Saskatchewan Hours of Work Act* restricts working hours to eight per day and 44 per week unless time and one-half is paid for time worked beyond those limits. Variations are permitted for shift workers, for workers on a five-day week and for special cases. The Act applies to all workers employed in, or within a five-mile radius of, any city, to employees in all factories in the Province, and to those in shops and offices in towns or villages covered by Minimum Wage Orders. "Factory" does not include a creamery, grain elevator, garage, blacksmith shop or machine shop used chiefly for repair or servicing of farm

machinery. "Shop" includes barber shop, beauty parlour and dry cleaning or dyeing establishments. Exempted are: workers employed in farming, ranching, market gardening, domestic service, undertakings employing only the employer's family, janitors, caretakers, persons travelling regularly to two or more places 10 or more miles apart, those with managerial duties, and those under the *Fire Departments Platoon Act*.

The *Trade Union Act* was amended to enable an application to the court to enforce a Board order to be made not only by the union affected but by the Board or by any interested person. Discharge by an employer or an employer's agent of an "employee" instead of "a member of a trade union" will be presumed to be an unfair labour practice unless the contrary is shown. Unfair labour practices by employees now include commencing to take part in, or persuading any employee to commence to take part in, a strike while an application is pending before the Board. Provision is made for applying any Dominion Labour Relations Act or Order in place of the Trade Union Act within the Province in connection with any work, undertaking or business, and for agreements with the Federal Government for the joint administration in the Province of such Act or Order. The *Public Service Act, 1947*, makes provision for collective bargaining.

Under the *Workmen's Compensation (Accident Fund) Act*, the minimum monthly payment to a widow or invalid widower without children is now \$50. If there is one child the minimum is \$62 and if two or more children \$70 a month. Compensation may be paid to a common-law wife under certain conditions. The maximum amount of average earnings upon which compensation is based was raised from \$2,500 to \$3,000 a year. Compensation for permanent partial disability is to be estimated from the nature and degree of the injury and is to be a percentage of the amount prescribed for permanent total disability proportionate to such impairment. Compensation may be paid for severe disfigurement or other permanent injury even if there is no impairment of earning capacity. Railway employees included in the Brotherhood of Locomotive Firemen and Enginemen were brought under Part I of the Act, under which employers are collectively liable for compensation.

Under the *Minimum Wage Act* the Board now has power to determine what days shall be considered public holidays, to require payment of wages for such holidays and fix the rate.

The *Workmen's Wage Act*, which provides for the method and time of payment of wages and for recovery of unpaid wages, was amended to apply to persons employed at an hourly, daily or weekly wage in establishments or undertakings under the *Factories Act* or the *Minimum Wage Act*.

Any provision as to wages, hours or other working conditions in a schedule under the *Industrial Standards Act* is to be superseded by more favourable provision in the *Minimum Wage Act* or in any other Act, orders or regulations.

The *Boiler and Pressure Vessel Act, 1948* provides for regulations concerning liquefied petroleum gas plants.

Alberta.—The *Alberta Labour Act* consolidates, with some changes, the *Hours of Work Act*, the *Male and Female Minimum Wage Acts*, the *Labour Welfare Act* and the *Industrial Conciliation and Arbitration Act*. It applies to all employees except farm labourers and domestic servants. New provisions enable the Board of Industrial Relations to arbitrate a dispute between an employer and employees over

wages, hours and conditions of employment, and to make special orders requiring employers to give holidays with pay to persons whose employment is seasonal or intermittent. Provision is made to enable disputes in the coal mining industry to be dealt with under Federal legislation instead of under the Act.

In the revision of the *Workmen's Compensation Act*, maximum average earnings on which compensation may be based were increased from \$2,000 to \$2,500 and payments for burial expenses from \$125 to \$175. Maximum monthly payments to a widow or invalid widower were raised from \$40 to \$50 and to children from \$12 to \$15. Where the children are orphans, or the surviving parent is confined to gaol or an institution, an extra payment not exceeding \$10 a month may be given. An additional \$10 is provided for a child between 16 and 18 continuing to attend school. Compensation to dependents other than consort or children was raised from \$35 to \$50 a month; in the case of parents, with a maximum total of \$85 instead of \$70. Where disability lasts for more than six days, compensation is paid from the first day. In permanent disability cases the Board is given wider scope in estimating compensation by having regard to earnings of the workman in other industries under the Act.

British Columbia.—The *Industrial Conciliation and Arbitration Act* provides machinery for the settlement of disputes between employers and employees; requires an employer to recognize and negotiate with the representatives of his workpeople, or, where there is a union, with the representatives of the union in which a majority of his employees or a majority of a certain class of his employees are organized; safeguards the workers' right to organize; sets out procedure for determining the proper bargaining agent, if any; requires a collective agreement to be observed by both parties and to provide means of settling disputes arising out of it by agreement or arbitration; declares certain practices by employers and workpeople to be unfair and punishable; and prohibits strikes and lockouts during the life of a collective agreement or until the procedure for settling disputes has been complied with.

Changes in the *Workmen's Compensation Act* increase funeral expenses allowed to \$150, raise pensions to consort and children to \$50 and \$12.50 a month, respectively, and remove the limit of \$80 a month on total compensation in fatal cases.

An amendment to the *Factories Act* enables the inspector to give written exemption from the provision requiring employers to allow girls and women one hour at noon, each day, for a meal.

The *Shops Regulation and Weekly Half-holiday Act* was amended to replace "half-holiday" by "holiday" in the title and throughout and to remove places where vegetables are sold from the list of businesses exempted from the weekly holiday provisions.

"Working-year", the qualifying period under the *Annual Holidays Act*, is now 250 days instead of 280, as formerly.

Yukon.—The *Workmen's Compensation Ordinance* was amended to increase compensation in fatal cases from \$2,500 to \$5,000 and to provide in addition for payment of \$750 to each dependent child under 16, the total compensation not to exceed \$8,600. Compensation for permanent total disability was raised from \$3,000 to \$6,000, and the amounts fixed in the schedule for specified injuries which partially disable was doubled in each case.

The *Motor Carrier Ordinance* enables the Highway Commission to make regulations governing hours of work for drivers of public passenger and freight vehicles.

Section 2.—Occupations of the Gainfully Occupied Population

Detailed statistics on the occupations of the Canadian people in 1941 will be found in Vol. VII, Census of Canada, 1941. A special review of this subject, based on the 1941 Census figures, appears at pp. 1062-1073 of the 1943-44 Year Book, and further information at pp. 1168-1169 of the 1945 edition.

Section 3.—Employment and Unemployment

Subsection 1.—Employment and Unemployment Statistics of the Census

Detailed statistics of earnings, employment and unemployment as at June 1, 1941, will be found in Vol. VI, Census of Canada, 1941.

Subsection 2.—Employment and Payrolls as Reported by Employers*

For over 25 years, the Dominion Bureau of Statistics has made monthly surveys of employment in major industries excluding agriculture, domestic and personal service, and government administration. The broad industrial groups covered by these surveys are: logging, mining, manufacturing, construction, transportation and storage, communications, trade, services (chiefly hotels, restaurants, laundries and dry-cleaning plants) and finance. From early in 1941, the surveys of employment were extended to cover the current earnings of those in recorded employment and, since late in 1944, monthly data on man-hours and hourly earnings have also been collected. Inquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and the semi-annual surveys of the previous few years.

For practical reasons associated with problems of collection,† the current inquiries are limited to firms and branches ordinarily employing 15 or more persons. The restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the provincial coverage of total employees. It is important to note that in all cases the coverage is large.

In 1947, industrial employment in Canada reached the highest point on record; the annual average index (based on 1926 as 100) for the country as a whole was 187.9, exceeding by 8.5 p.c. the annual average of 173.2 for 1946. The previous high level was 184.1 in 1943. The trend of employment in 1947 reflected the high level of economic activity generally prevailing in the country as a whole. Although there were many industrial disputes during the year, they were not so extensive nor did they have the same far-reaching effect on employment and current earnings as the lengthy strikes of 1946. The material and labour shortages eased considerably, although skilled labour was still in demand in certain industries and areas, and expansion was slowed down to some extent by scarcity and by costs of certain materials. At the same time, the demand for Canadian goods and services was well maintained both on the home market and in foreign countries.

* Revised under the direction of H. F. Greenway, Director, Labour and Prices Division, Dominion Bureau of Statistics, by Miss M. E. K. Roughsedge, Chief, Employment Statistics Section.

† The methods used in preparing the current statistics of employment and payrolls are explained in the Monthly Bulletin on these subjects.

In the 12 months under review, the employment index varied by little more than one point from 181.0 at Jan. 1 to the low point for the year recorded May 1, when the index was 179.6. During this period, the situation had been affected by the dispute in the Maritime coal mines which extended from Feb. 15 to June 11. From the beginning of May the index of recorded employment steadily ascended to reach the all-time maximum of 199.6 at Dec. 1. The 1947 index was calculated from material furnished monthly to the Dominion Bureau of Statistics by some 17,900 establishments in the eight leading industries which reported an average of 1,935,548 employees. In 1946, the employers co-operating in the survey averaged 16,100 and their employees, 1,771,481.

The 1947 index of employment in the manufacturing industries increased over 1946 by 6.8 p.c., compared with an advance of 12.7 p.c. in the non-manufacturing industries as a unit. The relatively greater increase in the latter group resulted in a return to a more normal distribution of recorded employment between these two groups than has been in evidence for several years. Within manufacturing, there were increases in employment in both the durable and non-durable divisions; the relatively larger increase in the former was particularly interesting in that it indicated a reversal of the downward trend indicated in the group since 1943. It may also be noted that in 1946 the situation in the heavy manufactured goods industries as a whole had been seriously affected by industrial disputes and material shortages, factors which were of lesser importance in the year under review. Each of the non-manufacturing industries for which data are available showed improvement, the increases in the index numbers in 1947 over 1946 ranging from 1.9 p.c. in mining and 6.6 p.c. in transportation to 15.8 p.c. in communications and 18 p.c. in construction and maintenance. In most cases, the advance in 1947 resulted in a new all-time high level.

The decline in the proportion of women on the staffs of reporting firms, which became evident in the early post-war period, continued in 1947. The percentage change, however, was not so great as in the preceding year. At Oct. 1, 1947, the proportion of women per 1,000 workers of both sexes in the nine leading industries was 220, compared with 232 at Oct. 1, 1946, and 271 at Oct. 1, 1944, when the ratio was at its maximum. Although the proportion of females in these industries declined, the reported numbers of women employed actually increased by about 4.7 p.c. between Oct. 1, 1946, and Oct. 1, 1947; the advance among men in the same period amounted to about 11.8 p.c. In 1947, the ratio of women workers diminished in each of the nine leading industries except finance, in which there was a small increase over 1946, although that ratio was lower than in 1945, 1944 or 1943. As compared with the war years, the most marked reductions in the proportion of women workers in 1947 were noted in communications, trade and manufacturing. The service industries, mainly hotels, restaurants, laundries and dry-cleaning plants, were in first place in the employment of large proportions of women in 1947; 536 per 1,000 persons on the payrolls of leading establishments in those divisions were

women. A year earlier, the communications group had reported the highest ratio of women workers in the classes for which data are available. Table 1 gives the percentage distribution of women workers in the leading industrial establishments at Oct. 1, in the years 1942 to 1947.

1.—Percentage of Women Employed in Specified Industrial Groups as at Oct. 1, 1942-47

Industrial Group	1942	1943	1944	1945	1946	1947
Manufacturing ¹	25.7	27.9	28.3	26.0	24.1	22.9
Durable goods.....	15.3	19.1	18.8	13.8	11.7	10.9
Non-durable goods.....	38.6	40.4	40.2	37.6	35.1	34.4
Communications.....	47.7	52.6	55.5	55.8	54.7	52.8
Transportation.....	6.0	8.0	8.5	8.2	6.8	6.5
Services ²	51.6	58.0	58.2	57.6	54.4	53.6
Trade.....	45.3	49.1	49.3	46.8	41.9	40.2
Finance.....	44.9	50.8	53.9	53.3	46.7	47.1
Nine leading industries ³	23.5	26.2	27.1	25.3	23.2	22.0

¹ In 1939, the proportion of female employees in all manufacturing establishments reporting to the Annual Census of Industry was 22 p.c. ² Consisting mainly of hotels, restaurants, laundries and dry-cleaning establishments. ³ These industries include also logging, mining and construction in which the number of female workers is very small.

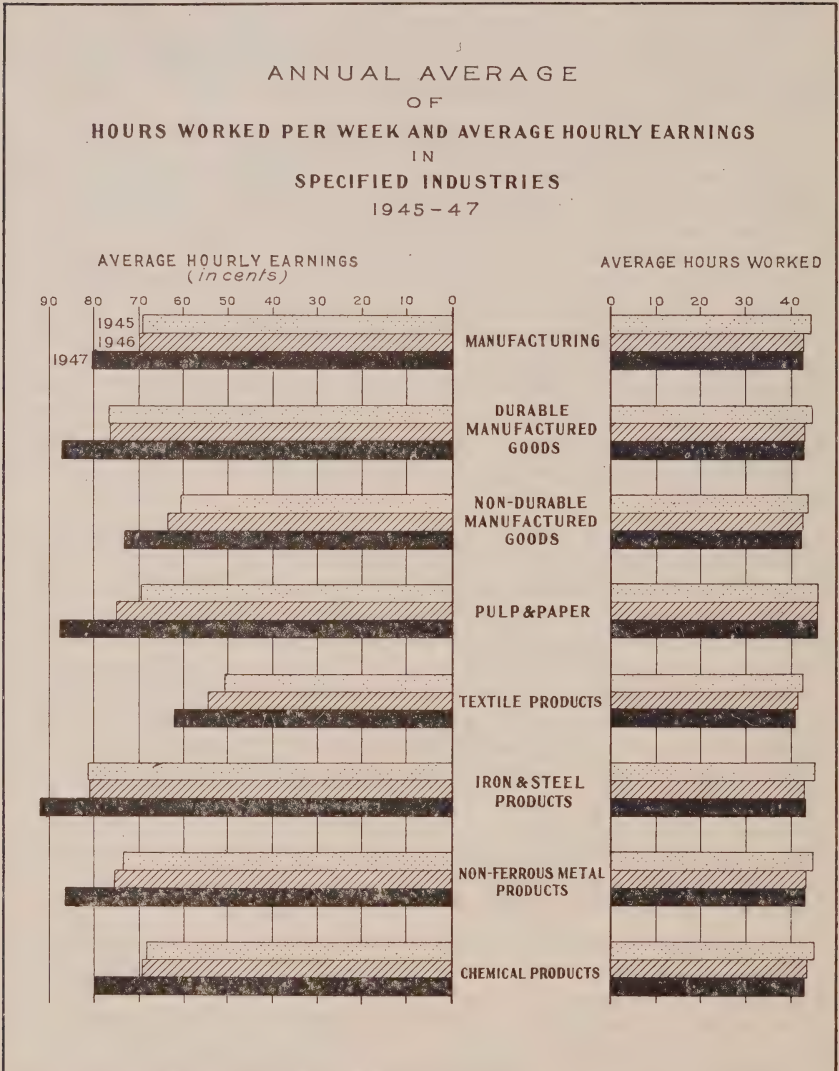

The 1947 annual index of "payrolls" (June 1, 1941=100) for the eight leading industries was 172.6, compared with 142.4 in 1946 and 142.6 in 1945, the previous maximum in the record dating from the spring of 1941. The increase of 21.2 p.c. in the index for the year under review compares favourably with that of 8.5 p.c. shown in the employment index during the same period. Unlike the employment index, the index number of payrolls advanced practically without interruption from Jan. 1 to Dec. 1, when, at 193.9, it was 12.3 p.c. above the annual average. This was due in part to an accelerated pace in industry, but also reflected numerous upward adjustments in wage scales. The annual average of the weekly salaries and wages disbursed by leading employers in the eight leading industries in Canada in 1947 was \$70,059,984, indicating an annual payroll of approximately \$3,643,000,000. It is estimated that these firms in 1946 distributed an average of \$57,409,624 in weekly salaries and wages, their yearly payrolls approximating \$2,985,000,000.

In the eight leading industrial divisions, the per capita weekly earnings figure in 1947 stood at \$36.15, the highest in the record of over six and a half years. This was a substantial increase over the preceding year, when the mean was \$32.38; in 1945, 1944, 1943 and 1942 the averages were \$31.99, \$31.84, \$30.78 and \$28.56, respectively. These figures represent gross earnings, before deductions are made for taxes, unemployment insurance, etc. In 1947, the per capita earnings of the workers in manufacturing for whom data are available rose by 12.5 p.c., as compared with the general increase of 11.6 p.c. Within the non-manufacturing group, the highest weekly salaries and wages generally were paid in transportation and mining, which reported annual averages of \$44.16 and \$43.03 per week, respectively. Provincially, the highest per capita weekly earnings were indicated in British Columbia, where they amounted to an average of \$38.74. As in former years, due to the large proportion of employment in the highly paid automotive industry, the per capita figure of \$43.54 for Windsor, Ont., was higher than that for any other city for which data are segregated.

In 1947, the annual figure of hourly earnings of wage-earners in manufacturing industries for whom records of hours worked are maintained was 80.3 cents, the highest average on record. This figure represented a gain of 14.7 p.c. over 1946, when the average was 70 cents. Within manufacturing, a slightly larger increase was noted in the non-durable goods section, where the average hourly rate rose by 15 p.c. as compared with a gain of 14.1 p.c. in the durable manufactured goods

industries. Table 2 shows statistics of man-hours and average hourly and weekly earnings in leading manufacturing establishments. As in previous years, the hourly earnings generally indicated in British Columbia were higher than in any other province, the 1947 average being 96.3 cents an hour, a figure 19.9 p.c. above the average for Canada.

Monthly statistics are published in this series for Montreal, Toronto, Hamilton, Winnipeg and Vancouver, in which the averages in 1947 ranged from 77.1 cents in Montreal to 95.3 cents in Vancouver. In regard to the provincial and city

figures of average earnings, it should be pointed out that these are greatly affected by the industrial distribution of the persons employed in manufacturing in the different areas, and also by the related sex and age distribution of the workers.

In the non-manufacturing industries, fewer wage-earners are paid by the hour; in the classes for which information is published, an unusually high hourly rate of 98 cents per hour was reported in mining as compared with 87.3 cents in 1946. In coal mining, the 1947 mean was 110.4 cents, and the 1946 average 95.9 cents. Hourly-rated wage-earners reported in building construction were paid an average of 91.0 cents in 1947, as compared with 83.4 cents in 1946. In connection with the latter figures, it should be noted that large proportions of unskilled workers are employed in the industry, as well as many highly skilled tradesmen.

2.—Man-Hours Worked and Average Hourly and Weekly Earnings in Leading Manufacturing Establishments, 1945-47

Industry	Average Hours Worked			Average Hourly Earnings			Average Weekly Wages		
	1945	1946	1947	1945	1946	1947	1945	1946	1947
	No.	No.	No.	cts.	cts.	cts.	\$	\$	\$
Manufacturing.....	44.3	42.7	42.5	69.4	70.0	80.3	30.71	29.87	34.13
Durable manufactured goods.....	44.7	42.8	42.7	76.7	76.4	87.2	34.30	32.68	37.23
Non-durable manufactured goods.....	43.7	42.6	42.3	60.7	63.8	73.4	26.59	27.18	31.05

The trend towards the shorter working week in manufacturing continued in 1947; the typical wage-earner for whom data are available worked an average of 42.5 hours as compared with 42.7 in 1946. This decline, however, was decidedly smaller than that of 1.6 hours recorded in 1946 from 1945, when overtime in war plants had been an important factor. A decrease in working time was noted in both the durable and non-durable sections in the year under review. In the non-manufacturing group, the average number of hours worked declined in all industries with the exception of construction, in which hours were lengthened slightly as a result of the heavy post-war demand for building and also for improved highways.

3.—Summary Statistics of Employment and Payrolls Reported Monthly by Co-operating Establishments, 1947

Province	Annual Averages of—		Average Weekly Earnings	Annual Average Index Numbers of—	
	Employees	Weekly Payrolls		Em- ployment	Payrolls
Province	No.	\$	\$

Grand Totals.....	2,016,291	73,055,315	36.19	123.4	172.5

¹ Includes iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products. ² Includes the remaining manufacturing industries, with the exception of electric light and power. ³ Consists mainly of hotels and restaurants, laundries and dry-cleaning establishments.

Employment and Payrolls by Economic Areas.—During 1947 industrial employment reached all-time high levels in all regions with the exception of the Maritimes and Quebec. The employment indexes for these latter areas in the year under review were not greatly below their wartime peak. Standing at the 1947 high of 205.6 at Dec. 1, the Quebec figure was only 1.3 p.c. below its all-time maximum of 208.3 at Dec. 1, 1943, while the 1947 high index for the Maritimes was 193.3 at Nov. 1, just 6.3 points below the Dec. 1, 1943, level.

During 1947, important gains in recorded employment were made in all provinces. The most pronounced expansion in industrial activity as compared with 1946 took place in British Columbia and Ontario. The employment indexes for these provinces increased by 9·8 p.c. and 8·9 p.c., respectively, from Dec. 1, 1946, to Dec. 1, 1947. Although there was improvement in all major industries in these areas, the upward movement in logging and construction was especially noteworthy in British Columbia, while construction and trade in Ontario showed substantial expansion.

In Quebec, the 1947 employment situation improved generally in all major industries; the gains indicated in construction were particularly marked. The Maritime area was the only region in which employment was curtailed in any of the major industrial groups although logging and construction showed extensive expansion there also.

The trend of recorded employment in the Prairie Provinces continued favourable throughout 1947, except for slight recessions at Feb. 1 and Oct. 1. It is interesting to note that in this area only about three persons in ten on the payrolls of the larger industrial firms in the eight leading industries were engaged in manufacturing, as compared with approximately six in ten in Ontario and Quebec. This difference in distribution largely accounts for the fact that the level of employment in the Prairie area was better maintained in the immediate post-war period than in those provinces where manufacturing provides work for greater proportions of the total working force. The trends in the Prairies therefore followed a more normal course during and after the War. Except for a minor decline in 1945, the index has shown annual increases since 1937.

In 1947, as in the past few years, there was a substantially greater rise in the annual indexes of aggregate payrolls in all areas than in those of employment. This was largely due to the fact that wage and salary adjustments were widespread and extensive. The annual average of the per capita weekly earnings in the major industrial divisions increased considerably over 1946, the advances ranging from 8·8 p.c. in the Maritime Provinces to 27·3 p.c. in British Columbia.

4.—Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1946 and 1947, with Yearly Averages 1924, 1929 and 1933-47

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1946 and Dec. 1, 1947. Averages for the years 1921-32 are given at pp. 613-614 of the 1947 Year Book.

Percentage distribution of employees reported in eco- nomic areas, as at Dec. 1, 1947.....	7.4	30.1	41.6	11.5	9.4	100.0

Employment and Payrolls by Cities.—A substantial proportion of the total workers in non-agricultural industrial employment in Canada is situated in the principal cities, a concentration which increased during the War, but has since declined as more normal distributions have been re-established. Thus in 1944 the proportion of workers on the payrolls of the larger firms in the eight cities with populations exceeding 100,000 was 46.1 p.c. of the total for the Dominion, but by 1947 the proportion had fallen to 43.2 p.c. Similar trends may be noted in the payroll disbursements. In 1944, the payrolls disbursed by the reporting employers in the eight largest cities made up 46.7 p.c. of the aggregate reported by all firms, while in 1947 the proportion dropped to 42.8 p.c.

Relatively, there was a somewhat greater increase during 1947 in the level of employment in the small centres and rural areas taken as a whole, than in that indicated by the eight largest cities taken as a unit. The composite indexes for the eight leading cities showed a gain of 7.7 p.c. over 1946, compared with a rise of 9 p.c. in the remaining areas. The general increase for the country as a whole amounted to 8.5 p.c.

Industrial activity in each of the eight leading centres showed marked improvement in 1947 compared with 1946. As will be seen from Table 5, the largest percentage gains in employment were in Vancouver, Hamilton and Windsor, in each of which industrial disputes had been an important factor in 1946.

The index number of payrolls for Canada's eight largest cities taken as a whole, increased in 1947 over 1946 by 19.8 p.c., compared with an advance of 21.2 p.c. in the index number of payrolls for the country as a whole. Marked increases in the per capita weekly earnings of persons employed by the co-operating firms were noted in the leading cities in 1947, when new all-time highs were established. The increase of 14.4 p.c. from 1946 in the average weekly salaries and wages in Windsor was particularly noteworthy. Statistics of average weekly wages of hourly-rated wage-earners employed in leading manufacturing establishments are available for several of the larger industrial centres. These show that in 1947 the average weekly wages reported in Vancouver and Hamilton, at \$36.69 and \$36.41, respectively, were well above the Dominion mean of \$34.13, largely because of the high proportion of employees engaged in the heavy manufacturing industries in these cities. The weekly wages indicated by factories in Toronto averaged \$33.90, those in Winnipeg, \$32.78, and in Montreal, \$32.38.

5.—Index Numbers of Employment as Reported by Leading Employers in Certain Cities, by Months, 1946 and 1947, with Yearly Averages 1929 and 1933-47

NOTE.—These indexes are calculated as at the first day of each month on the base 1926=100. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 1, 1946 and Dec. 1, 1947. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book and for 1930-32 at p. 615 of the 1947 edition.

Employment and Payrolls by Industries.—An analysis of the employment situation in Canada in 1947 shows that the expansive movement extended to all eight industries. The annual average indexes in 1947 were the highest on record for most industries, manufacturing and mining being the exceptions.

As might be expected, following the virtual cessation of non-essential building work during the War, there was relatively greater expansion in employment in construction and maintenance in 1947 than in other industries, the index, at 152.9 (1926=100), being 18 p.c. higher than that for the preceding year. There were important increases in activity in building and highway construction and maintenance, while employment in railway construction and maintenance declined by 0.9 p.c. The per capita weekly earnings reported in the construction industry as a whole rose from \$31.53 in 1946 to \$34.86 in 1947; in the building trades average salaries and wages rose from \$33.97 in the preceding year to \$37.41 in 1947, while the average hourly rate advanced by 9.1 p.c. to 91 cents in the latter year. Employment in communications also expanded substantially in 1947, when the index of 164.3 was 15.8 p.c. greater than the annual index for the preceding year. The improvement took place largely in the telephone division. The index of aggregate payrolls in communications as a whole showed an advance of 21.5 p.c. in the year.

The steady demand for lumber and pulp and paper products kept employment in logging at a high level in 1947, when the index increased by 15.1 p.c. as compared with 1946, bringing the annual figure to a new all-time maximum of 309.1. Shortages of labour, which had previously retarded the industry, were alleviated in some cases by the employment of displaced persons from Europe. The average weekly salaries and wages in logging in 1947 reported by leading employers were

\$35.42, compared with \$29.03 in 1946. This increase of 22.0 p.c. exceeded that indicated in any other of the nine leading industries. It should be noted that the weekly earnings of employees in bushwork quoted do not include the value of board and room which is frequently given in addition to those amounts.

The 1947 annual index of employment in manufacturing, at 199.0, showed an increase of 6.8 p.c. over 1946. Although this average was extremely high, exceeding by some 77 p.c. the 1939 index, it was a good deal lower than the annual index of 226.2 in 1943, when wartime production was at its peak. In the year under review, marked gains were made in both the durable and non-durable manufactured goods sections as compared with 1946, when the existence of serious industrial disputes greatly affected the situation, directly and indirectly. This factor was of especial importance in the heavy industries, in which there was particularly marked improvement in 1947. Within this class, increases in employment were indicated in all groups, particularly the lumber, clay, glass and stone and non-ferrous metal products. The iron and steel group, as a whole, showed an advance of 5.1 p.c. over the previous year; within this group, the largest increase was shown in the automobiles and parts division, the increase amounting to 22 p.c. On the other hand, employment in steel shipbuilding and repair declined by 6.4 p.c. during 1947. In the non-durable goods section of manufacturing, there were important advances in employment in rubber, pulp and paper, textiles, and vegetable food factories, while losses were noted in the fur and leather products industries. The annual index of payrolls in the manufacturing industries, taken as a whole, increased by 20.5 p.c. from 1946 to 1947. The per capita weekly earnings increased by 12.5 p.c., to an all-time high level of \$36.57 in 1947; as has already been stated, there had been considerable losses in employment in the preceding year due to labour-management disputes, with consequent reductions in earnings. Widespread increases in wage rates during 1947, however, contributed materially to the higher level of earnings.

The index of employment for mining in 1947 showed an increase of only 1.9 p.c. as compared with 1946; the situation in that industry was seriously affected during the earlier months of 1947 by the industrial dispute in the Maritime coalfields. As a result, the index of employment in coal mining declined by 17.7 p.c. On the other hand, marked improvement was reported by employers in the remaining non-metallic mineral groups and in the extraction of metallic ores. The per capita earnings reported in mining as a whole increased from \$38.60 per week in 1945 and \$39.21 per week in 1946, to \$43.03 in 1947.

Important expansion in employment was also noted in the remaining major industries. The index for trade increased from 191.2 in 1946 to 207.1 in 1947, while in the service category (consisting mainly of hotels and restaurants and laundries and dry-cleaning establishments) the reporting firms increased their staffs by 7.1 p.c. The favourable movement in employment in transportation extended to all three main branches, there being a rise of 6.6 p.c. in the general index for the division, accompanied by an increase of 17.3 p.c. in the index of aggregate payrolls.

6.—Index Numbers of Employment, by Industrial Groups and by Months, 1946 and 1947, with Yearly Averages, 1929 and 1933-47

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 1, 1946 and 1947. Averages for 1921-28, inclusive, are given at p. 773 of the 1938 Year Book and for 1930-32 at p. 617 of the 1947 edition.

Subsection 3.—Labour Force Surveys*

Recognition of the importance of current statistics on total employment and unemployment in Canada led to the introduction of large-scale periodic sample surveys of the population in the autumn of 1945. At that time, the Dominion

* Prepared under the direction of C. M. Isbister, Director, Central Research and Development Division, Dominion Bureau of Statistics, by R. W. James, Chief, Sampling Unit.

Bureau of Statistics established a number of regional offices to direct the operations of several hundred temporary enumerators engaged in interviewing sample households. Surveys of the labour force have been carried on at intervals of approximately three months since November, 1945. The technique may be described as multi-stage area sampling and involves the selection of progressively smaller sample areas, and ultimately households, random methods of choice being used at every stage of selection. Usually, the sample includes from 25,000 to 30,000 households but once a year, in the spring, it is increased to from 50,000 to 60,000 households in order to improve the estimates of interprovincial migration obtained from the sample.

The main purpose of the labour force surveys is to provide an exhaustive classification of persons 14 years of age or over on the basis of their current activity during a specified week. The main classifications are: (1) employed; (2) unemployed; (3) not in the labour force. The third group includes persons who are keeping house, going to school, retired, and those permanently unable to work because of age or other reasons. Persons who worked during the survey week, as well as those temporarily absent from their jobs because of illness, vacation, bad weather, labour disputes or temporary layoff are classed as employed. Those who were looking for work, but were not working, are counted as unemployed. The total civilian labour force is made up of the employed and the unemployed.

The estimates obtained from the labour force surveys exclude the following groups: members of the Armed Services; inmates of institutions; Indians living on reservations and persons living in remote areas who could be enumerated only at great expense. Moreover, since the estimates are usually based on a one per cent sample of the population, they are all subject to sampling error which may be large for relatively small magnitudes.

Changes in regional employment conditions since the first survey are summarized in Table 7.

Subsection 4.—Unemployment as Reported by Trade Unions

Quarterly statistics on unemployment are compiled and published in the *Labour Gazette* by the Department of Labour. These are based, at the present time, on returns received from about 2,400 local trade union branches, having an aggregate membership of more than 450,000 workers. "Unemployment" means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired and members of unions involved in industrial disputes are excluded from the tabulation. As the number of unions making returns varies from one date to another, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each date have reference only to the reporting organizations.

8.—Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1933-44 and Quarterly, 1945-47

NOTE.—For percentages of unemployment as at June 30 and Dec. 31 from 1915 to 1930, see p. 827 of the 1934-35 edition of the Year Book. For monthly data from 1921, see successive issues of the Year Book commencing with the 1922-23 edition. Quarterly figures were first published for 1945.

¹ Less than one-tenth of one per cent.

Section 4.—Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, forestry, fishing, lumbering and logging (unless in an area where the Commission has prescribed that persons employed in lumbering and logging shall be insured—limited at present to the Province of British Columbia), private domestic service, private-duty nursing, certain director-officers of corporations, workers on rates other than hourly, daily or piece rates if

earning more than \$3,120 per year and (except by consent of the Commission) employment in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$3,120 or less per year under weekly, monthly or yearly rates. An amendment, effective Apr. 1, 1948, insured employment in stevedoring, previously one of the major employments which were excluded.

Unemployment Insurance Fund.—Both employers and employees contribute to the Fund, the total paid by each group being approximately equal. The Federal Government contributes an amount equal to one-fifth of the combined employer-employee contributions, and also assumes the cost of administration. From July 1, 1941, to June 30, 1948, employers and employees contributed \$463,657,098 to the Fund and the Dominion added \$92,733,927. Interest and profit on sale of securities amounted to \$38,181,653 and fines of \$17,026 made a total revenue of \$594,589,706.

Benefit first became payable on Jan. 27, 1942, and from that date to June 30, 1948, of the 1,854,067 claims filed at local offices, 1,080,610 were allowed and 9,222 were awaiting decision. Total benefit payments amounted to \$129,145,295, leaving a balance of \$465,444,411 in the Fund. Reserves of the Fund are invested in Dominion of Canada bonds and, at the end of 1947, the par value of bonds held amounted to \$414,023,000.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Class	Earnings in a Week	Weekly Contributions ¹		Denomina- tion of Stamp ²	Weekly Benefits ³	
		By Employee	By Employer		Single Person	Person With One or More Dependents
		cts.	cts.	cts.	\$	\$
0	Less than 90 cents a day or under 16 years of age.....	4	18 cents paid on his behalf by Employer ⁴	18	4	4
1	\$ 5.40 to \$ 7.49.....	18	12	30	4.20	4.80
2	\$ 7.50 to \$ 9.59.....	24	15	39	5.10	6.30
3	\$ 9.60 to \$11.99.....	24	18	42	6.00	7.50
4	\$12.00 to \$14.99.....	24	21	45	7.20	9.00
5	\$15.00 to \$19.99.....	24	24	48	8.10	10.20
6	\$20.00 to \$25.99.....	30	30	60	10.20	12.90
7	\$26.00 to \$33.99.....	36	36	72	12.30	15.60
8	\$34.00 or more.....	42	42	84	14.40	18.30

¹ The daily rate of contribution in respect of each class is one-sixth of the weekly rates. ² Unemployment insurance stamps combine both employer and employee contributions. ³ Rates calculated on assumption that the person is in the same class for the last 180 days in the two years preceding claim.

Daily benefit for an insured person without dependents is 34 times the average of his 180 most recent daily contributions, and 45 times the average daily contribution less ten cents per day in the case of a person mainly or wholly maintaining one or more dependents. The daily rate is one-sixth of the weekly rate.

⁴ Workers in this class make no contributions (the contributions being wholly borne by the employer) and are not eligible for benefit. They may, however, accumulate benefit rights on the basis of the employer contributions.

No benefit is payable during the first nine days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal

to one-fifth the number of contribution days during the previous five years, less one-third of the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:—

- (1) The payment of not less than thirty weekly (or 180 daily) contributions within two years, while in insured employment. (The two-year period may be extended in certain circumstances.)
- (2) Not more than 50 p.c. of contributions within one year preceding the claim being at the lowest rate specified in the Second Schedule.
- (3) Proper presentation of claim.
- (4) Claimant being at least 16 years of age.

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside of Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Statistics of Unemployment Insurance.*—Benefits under the Unemployment Insurance Act first became payable in January, 1942. Except for a period of some nine months following the cessation of hostilities in Europe in the spring of 1945, the monthly figures on claims filed have shown a definite seasonal variation. The typical seasonal movement involves increasing monthly totals in the autumn and winter months and decreasing totals in spring and summer. In 1942, the monthly average of initial and renewal claims filed was 2,244, the range being from 663 to 4,629. The 1943 monthly average was 3,055 with the monthly totals ranging from 1,013 to 6,562. During 1944, the monthly average was 7,575 with a range from 3,106 to 13,770. With the end of the War in August, 1945, the monthly totals in the last half of the year increased sharply, resulting in an average of 24,699 initial and renewal claims per month for 1945, monthly totals ranging from 8,430 to 57,612. In 1946, the monthly average of initial and renewal claims filed was 40,722 while the monthly totals ranged from 25,115 to 71,932. During 1947 the monthly average was 36,904, ranging from 17,281 to 73,578.

The number of beneficiaries each month has fluctuated with the number of claims filed, subject to a lag of approximately one month. Because of re-employment, or because of the provisions of the Act governing the receipt of benefits, the number of beneficiaries in any month is usually less than the number of claimants. Only when the claims received are falling off sharply, is the number of beneficiaries in a period likely to exceed the number of claimants.

An indication of the extent of recorded unemployment among workers covered by unemployment insurance is given by the numbers signing the live unemployment register in the last week of each month. Those maintaining a live claim for benefit must sign the register once a week, thus certifying that they are unemployed, are capable of and available for work but unable to find suitable employment.

* Statistics of Unemployment Insurance are compiled and published by the Unemployment Insurance Statistics Section of the Dominion Bureau of Statistics from material supplied by the Unemployment Insurance Commission.

The same seasonality has been evident in these figures as in those of claims filed but the live register supplies a measure of recorded unemployment at a given time whereas claims filed indicate the number of cases of recorded unemployment in a period.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data are published on benefit years established and benefit years terminated.

The number of persons insured under the Unemployment Insurance Act, shown in Table 9, was assumed to be those working in insurable employment as at Apr. 1, as indicated from returns on those receiving insurance books and contribution cards at that time.

Table 10 presents information on the persons for whom current benefit years were in existence during 1946. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means, merely, that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 486,600 persons held benefit years current in 1946, only 351,476 actually drew benefit in that year.

In almost all cases (excluding death, etc.), a benefit year remains in existence either until the authorized benefit rights are exhausted or until twelve months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1945 were carried over into 1946 so that, although 304,743 persons established benefit years in 1946, a total of 486,600 persons held benefit years currently available in 1946.

The amount of benefit paid, as presented in Table 10, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1946.

In Table 11, the persons with current benefit years in 1946 are classified according to the number of benefit days paid. Table 12 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and by whether or not he has a dependent within the meaning of the Act.

The persons who established benefit years in 1946, those whose benefit years terminated in 1946, with those whose benefit years terminated by exhaustion of rights, shown separately, are classified by age groups in Table 13. In Table 14 the persons who established benefit years in 1946 and the benefit days paid on those benefit years are presented by industrial group and age.

Table 15 classifies those who established benefit years in 1946 and the days paid on those benefit years by occupation groups.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

9.—Persons Insured under the Unemployment Insurance Act, Classified by Industrial Groups and Sex, 1945 and 1946

NOTE.—These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed in insurable employment as at Apr. 1.

¹ Subject to adjustment for errors and omissions in final payments. The total of this column is the summation of the benefit paid to each individual during the calendar year. This is the accepted annual figure. This total is less than the total of the 12 monthly figures published for the year 1946 by an estimated \$2,500,000, due largely to the practice formerly followed in the Treasury Offices of closing their books on the 20th of each month. Thus the total of the monthly figures for 1946 relate actually to the period Dec. 20, 1945 to Dec. 30, 1946.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint Dominion-Provincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices.

16.—Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1937-46, and by Provinces, 1945 and 1946

NOTE.—Figures by provinces from 1920 to 1943, are given in the corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years 1920-36 are given at p. 766 of the 1938 edition.

Section 5.—Vocational Training*

During 1947, the Federal Department of Labour, in co-operation with the Provincial Governments, carried on various training projects under the Vocational Training Co-ordination Act, 1942: (1) Youth Training; (2) Assistance to Students; (3) Apprenticeship Training; (4) Training of workers released from gainful employment; (5) Vocational Training on the secondary school level; (6) Training of Discharged Members of the Forces.†

In regard to the last-named project, discharged members of the Forces are approved for vocational training by the Department of Veterans Affairs, but the Department of Labour is responsible for setting up training centres and carrying out the training. In Subsection 1 the administration of the program by the Department of Labour is outlined under the appropriate headings and, in Subsection 2, the relationship of the Department of Veterans Affairs to the vocational training of veterans is explained.

* Full information on this subject is given in the "Canadian Vocational Training Annual Report for 1946-47".

† University training under the Veterans' Rehabilitation Act is reviewed in Chapter IX on Education and Research, pp. 321-323.

The Vocational Training Advisory Council, appointed under the authority of the Act, continues to advise the Minister on the general aspects of training plans. This Council is representative of employers, organized labour, vocational education authorities, veterans' and women's organizations.

Subsection 1.—The Vocational Training Program of the Department of Labour

Table 17 shows the allotment of Dominion funds to the provinces for the year ended Mar. 31, 1948, and the total payments made by the Dominion against these allotments up to Apr. 30, 1948.

17.—Dominion Allotments for Vocational Training for the Year Ended Mar. 31, 1948, and Claims Paid to Apr. 30, 1948, by Provinces

Province	Youth Training		Training of Discharged Members of the Forces		Apprentice Training

¹ Includes claims paid and charged to previous year's allotment. ² In addition to this amount, \$37,201 was paid for buildings and \$1,027,736 for equipment from a special fund. Most of this money was paid to War Assets Corporation.

Youth Training.—Each province submitted to the Department of Labour a list of the various types of training it proposed to carry on. These, on approval by the Minister of Labour, were incorporated into appropriate schedules which set forth the regulations governing the operation of the different plans. The training consisted, for the most part, of various general and specialized courses for rural young people in agriculture, home craft and handicrafts, and other related subjects.

Assistance to Students.—Under the Youth Training Agreement with each province assistance was provided for nurses-in-training at hospitals and students in courses leading to a university degree, who had good academic standing but who, without financial assistance, could not continue training. At the discretion of the provincial authorities, assistance could be given in the form of a grant or a loan, or a combination of the two.

The special Student Aid Fund, which operated in previous years, was discontinued on Mar. 31, 1946. Grants to universities, which were made by the Department of Labour during the war years in order to meet additional costs of accelerated courses in medicine and dentistry, were also discontinued.

Apprentice Training.—Apprenticeship Acts are in force in all provinces and Agreements for Federal assistance are in effect with all except Prince Edward Island and Quebec. During 1947 several additional trades were brought within

the Acts. Considerable impetus to apprentice training was given by the large number of veterans who entered various designated trades. The number of non-veteran apprentices also increased rapidly and the supervision of apprentice training improved.

The amounts spent by the Department of Labour under the Apprenticeship Agreements are shown in Table 17 on p. 652.

Training of Unemployed Persons.—Agreements completed in 1945 between the Dominion and certain provinces provided for the training or retraining of workers who had been released from employment. Under these Agreements, the Dominion undertook to pay approximately 75 p.c. of the costs of training workers selected by representatives of the Provincial Governments and the National Employment Service.

During 1947, these Agreements were accepted and signed by the Provinces of British Columbia, Alberta, Saskatchewan, Nova Scotia and New Brunswick. Up to July 1948, comparatively little training had been carried out under them. Generally speaking, employment conditions had been good and the provinces were reluctant to set up courses for non-veteran workers until they were certain that veterans approved for training were going to receive it with a minimum of delay. Although the Federal appropriation for the training of unemployed persons for the year was \$290,000, only \$39,486 had been paid up to Apr. 30, 1948. This represented the Federal share in the training of 63 men and 196 women who received a total of 21,775 days' training.

Federal Assistance to Vocational Schools.—Ten-year Agreements are in effect by which all provinces receive Federal aid in vocational training on the secondary school level. Each province is given an annual grant of \$10,000. In addition, \$1,910,000 is allotted each year among the different provinces in proportion to the number of young persons in each province who are in the age group 15-19 years. The Agreements provide for a further contribution of \$10,000,000 to be allotted on the same basis and to be made available during a limited period for capital expenditures on buildings and equipment. Up to Apr. 30, 1948, claims had been paid by the Dominion for the year ended Mar. 31, 1948, amounting to \$991,760 for buildings and \$233,191 for equipment. Except for the \$10,000 grant, the Provincial Governments must match all Federal contributions dollar for dollar.

Training of Discharged Members of the Forces.—During 1947 the training of discharged members of the Forces was carried on under the Re-establishment Training Agreement, which was in effect in all provinces.

Administration.—The same method of administration was followed in 1947 as in previous years, with the Provincial Governments co-operating in the provision of vocational and pre-matriculation training. The staff for Canadian Vocational Training was augmented in accordance with requirements, and at one period reached a total of 2,805. Included in that number were regional staffs in each province, principals and instructors for schools, field representatives who looked after veterans training-on-the-job, and a large maintenance staff. Preference was given in all appointments to veterans with overseas service.

Throughout the year close relations were maintained with the Department of Veterans Affairs and with the National Employment Service, both at Head Office and through district offices of the two Departments and the local Employment Offices.

Enrolment.—Although the peak enrolment of veterans taking vocational and pre-matriculation training occurred at the end of July, 1946, when it reached 38,777, there were still 35,733 veterans taking training under the auspices of Canadian Vocational Training on Jan. 1, 1947. By the end of December, 1947, however, the number under training had been reduced to 6,869 and by the end of June, 1948, it had been further reduced to 1,096.

Training Facilities and Equipment.—As a result of the decrease in enrolment during the year it was necessary to amalgamate a number of courses and to close certain training centres. Amalgamation and closing down was carried out in such a manner that training was adversely affected to a minimum extent. Schools were closed at Pictou and Windsor in Nova Scotia; Milledgeville in New Brunswick; Montreal, Quebec and Sherbrooke in the Province of Quebec; Brockville, North Bay, Kitchener, London and Windsor in Ontario; Brandon in Manitoba; Prince Albert and Moose Jaw in Saskatchewan; Medicine Hat in Alberta; and Victoria in British Columbia.

As a result of the reduction in training facilities, many items of capital equipment became surplus. Some of these were acquired by the Provincial Governments on payment of 50 p.c. of the original purchase cost, and the balance were turned back to War Assets Corporation for disposal. In some localities courses set up by Canadian Vocational Training have been or will be continued by the Provinces. This is the case at Edmundston, N.B.; Three Rivers, Que.; Toronto, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver, B.C. Not all the schools at the foregoing localities have been turned over to the provinces, but the provinces concerned have expressed their intention to take over wholly or partially those still operating as veteran training centres.

As in previous years, use was made of a large number of private trade schools, business colleges, and provincial and municipal schools, for the accommodation of veterans who could not conveniently be received into Canadian vocational training centres, or who desired to take courses not given in those centres.

The policy of carrying on night shifts in addition to the day shifts at some Canadian Vocational Training Schools was also abolished everywhere early in the year, with the exception of training in watch repair.

Subsection 2.—Vocational Training of Veterans*

The rehabilitation training program procedure under the provisions of the Veterans Rehabilitation Act and the regulations governing training were, through modification and consolidation during 1946, welded into a comprehensive uniform plan which was in operation throughout Canada. Veterans were trained in approximately 100 specially organized institutes or training centres, operated by the Federal-Provincial organization known as Canadian Vocational Training. As the training of veterans has been completed it has been possible to dispense with these special centres with the result that in April, 1948, no more than 16 centres were still in operation in 12 municipalities.

* Prepared in the Department of Veterans Affairs.

The vocational training program, during the fiscal year 1947-48, showed a gradual decrease in numbers until at the month of March, 1948, there were less than half as many veterans in training as in March, 1947.

Of the total number of veterans receiving vocational training as at Mar. 31, 1948, 73.3 p.c. were receiving full-time training in schools and institutions; 17.7 p.c. were being trained on the job in industrial and commercial establishments; 7.9 p.c. were receiving assistance by way of fees for correspondence or part-time courses; 0.1 p.c. were blind veterans being trained for suitable occupations under the auspices of the National Institute for the Blind; and 1.0 p.c. were receiving matriculation training prior to the vocational training.

Training is provided for approximately 300 occupations in the schools and training centres throughout the Dominion, and training-on-the-job is provided in over 250 trades and occupations, many of which are included in the 300 previously quoted.

Table 18 indicates the growth and decline of the program since its inception. The numbers remained very small during 1943, due to the relatively small numbers being demobilized and the demand for workers in war industries at high rates of pay. The peak load was reached in November, 1946. Henceforward, there will be a very rapid decrease in numbers because few applications have been received since Jan. 1, 1948.

18.—Veterans Receiving Vocational Allowances During Each Month, 1943-48

Month	1943	1944	1945	1946	1947	1948
	No.	No.	No.	No.	No.	No.

August.....	271	950	4,145	35,827	21,347	8,646
September.....	330	1,083	4,332	36,882	19,977	—
October.....	335	1,360	5,980	39,057	18,998	—
November.....	394	1,596	8,523	40,422	18,292	—
December.....	459	1,700	16,457	39,630	16,853	—

The regulations provide for a maximum training period of 12 months subject to extension up to, but not exceeding, the period of active service. Those who served less than 12 months may receive training allowances for only as many months as they served on active rates of pay.

The average length of vocational training courses is approximately six months. In the case of highly skilled trades, veterans approved for advanced technical courses and those indentured as apprentices may receive assistance by way of grants or subsidies for two years or more provided they have served the necessary period to establish entitlement. Where veterans are trained on the job, the employer is expected to pay wages on a graduated scale commensurate with the earning

capacity of the trainee and subject to the limitations of the Act. The Department of Veterans Affairs subsidizes these wage rates up to approximately 80 p.c. of the amount the trainee will receive from the employer on completion of the subsidized training period.

From the inception of the Vocational Training Scheme until March, 1948, some 78,786 veterans had been granted allowances to enable them to take advantage of the training:—

<i>Year and Month</i>	<i>No.</i>	<i>Year and Month</i>	<i>No.</i>
November, 1941 – March, 1942...	238	April, 1945 – March, 1946.....	17,929
April, 1942 – March, 1943.....	783	April, 1946 – March, 1947.....	46,374
April, 1943 – March, 1944.....	1,497	April, 1947 – March, 1948.....	6,980
April, 1944 – March, 1945.....	4,985	TOTAL.....	78,786

The following subdivision of veterans according to the province in which the application for training was approved, is based upon Department of Veterans Affairs districts (applications approved at Head Office were for training outside Canada) and is liable to minor error where D.V.A. district boundaries and provincial boundaries do not coincide:—

<i>Province</i>	<i>No.</i>	<i>Province</i>	<i>No.</i>
Prince Edward Island.....	445	Saskatchewan.....	5,164
Nova Scotia.....	4,107	Alberta.....	6,509
New Brunswick.....	2,840	British Columbia.....	8,657
Quebec.....	11,845	Head Office.....	815
Ontario.....	30,566	TOTAL.....	78,786
Manitoba.....	7,838		

The status of the 13,215 veterans actually in receipt of allowances on Mar. 31, 1948, was as follows:—

<i>Nature of Training</i>	<i>Men</i>	<i>Women</i>	<i>Total</i>
	<i>No.</i>	<i>No.</i>	<i>No.</i>
In schools and training centres.....	8,481	1,218	9,699
Training-on-the-job.....	2,292	49	2,341
Pre-matriculation prior to vocational training.....	100	31	131
Correspondence courses: Employed persons.....	988	5	993
Correspondence courses: In hospitals and institutions.....	48	3	51
TOTALS.....	11,909	1,306	13,215

In addition to the above there were 371 men who were training-on-the-job without allowances, due to the fact that employer-trainers pay self-sustaining wages prior to the expiration of the training period.

As would be expected, certain trades and occupations account for the majority of the trainees; 250 or more approvals for training have been made in each of the following trades. The reason for the difference in the totals given above and that

in the following statement is that many veterans were allowed to change the occupation in which training was taken. Thus the number of approvals is somewhat inflated.

Trade or Occupation	Approvals for Training	Trade or Occupation	Approvals for Training
	No.		No.

Section 6.—Organized Labour in Canada

Information concerning trade unions is published in the Annual Report on *Labour Organization in Canada* issued by the Department of Labour.

At the close of 1946 there were 831,697 trade union members in Canada. The membership of the Trades and Labour Congress of Canada, as compiled from reports of unions to the Department of Labour, was 356,121 in 2,536 branches of affiliated and directly chartered unions; that of the Canadian Congress of Labour was 314,025 in 1,087 branches and local unions; that of the Canadian and Catholic Confederation of Labour, 70,367 in 338 branches; the independent railroad brotherhoods, 37,731 in 370 branches; and independent local unions, 4,298 in 47 branches.

Trades and Labour Congress of Canada.—The Congress is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883 when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a Dominion organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions, almost all of which are also affiliated with the American Federation of Labor, a number of Canadian or "national" unions and a number of directly chartered labour unions.

Canadian Congress of Labour.—This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches

of those international unions which, in the United States, are affiliated with the Congress of Industrial Organizations. The Canadian Congress has also among its members a number of unions to which it has granted charters.

Canadian and Catholic Confederation of Labour.—National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are grouped in federations according to industry as far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour.

Canada and the International Labour Organization.—The International Labour Organization was established in 1919 in association with the League of Nations under the Treaties of Peace with the object of improving labour conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session at Montreal, Que., on Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations.

An association of nations, financed by their Governments and controlled by representatives of those Governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body of the Office.

The Conference in normal times meets at least once a year, and is composed of four delegates from each Member State, two representing the Government and two representing employers and workers, respectively. Decisions of the Conference are in the form of Conventions or Recommendations. The former, when given legislative effect and ratified by Member States, are legally binding on them and their enforcement within such countries is a matter for annual consideration by the Conference. The ILO Constitution requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada, the competent authorities in respect to the subject matter of most of the Conventions and Recommendations are the Provincial Legislatures. Amendments to the Constitution adopted by the Conference in 1946 included new provisions concerning the obligations imposed on federal countries with respect to the manner of dealing with Conventions and Recommendations when ratified by two-thirds of the Member States. These changes in procedure are expected to facilitate the adoption of Conventions and Recommendations by the constituent States or Provinces of federal countries.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house.

The Governing Body consists of 32 persons, 16 Government representatives, eight employers' and eight workers' representatives, of whom all but the representatives of the eight States of chief industrial importance, which hold permanent seats, are elected triennially by the Conference. The Governing Body, which usually meets quarterly, has general supervision of the International Labour Office, frames its budget and fixes the agenda of the Conference when the Conference itself does not do so. Three sessions were held during 1947—in March, June and December, all at Geneva, Switzerland.

There have been 31 sessions of the Conference at which 90 draft Conventions and 83 Recommendations have been adopted covering a wide range of subjects: freedom of association; hours of work; weekly rest; holidays; minimum age for employment; night-work of women and young persons; minimum wages; health and safety; workmen's compensation; seamen's conditions; insurance against unemployment, sickness, old age and death; colonial labour problems; protection of migrant workers; and many other aspects of the protection of workers' rights and interests. There have been 971 ratifications of these Conventions from 55 countries.

Eight International Labour Conventions have been given legislative effect by the Federal Parliament and have been ratified by the Government, six relating to seamen, one to dockers and one to statistics.

During 1947 the International Labour Conference held its 30th Session, at Geneva; four of the eight Industrial Committees of the ILO held their second session (Coal-mining, Inland Transport, Iron and Steel Production and the Metal Trades); and the ILO's Sixth International Conference of Labour Statisticians took place. Canada was represented at all of these meetings, full accounts of which may be found in the *Labour Gazette*. The 31st Session of the Conference was held at San Francisco from June 17 to July 10, 1948.

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other Government authorities, from departmental correspondents and press reports.

22.—Fatal Industrial Accidents, by Industries, 1944-47

Causes of Fatal Accidents.—During 1947, the largest number of fatal accidents to gainfully employed persons, 470, were caused by moving trains, vehicles, etc. Falls of persons caused 233 fatalities and falling objects 170. Other fatal accidents included: 158 caused by dangerous substances, 33 by striking against or being struck by objects, 32 by working machines, 28 by hoisting apparatus, 21 by animals, 17 by handling objects, 12 by prime movers, and 5 by tools. Included in the category "other causes" were 261 fatalities of which 188 were due to industrial disease, strain, etc. The number of accidents, fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards are shown in Subsection 2.

Subsection 2.—Workmen's Compensation*

In all provinces, except Prince Edward Island, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. To ensure payment of such compensation, each provincial Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation, as determined by the Board, and pay a proportion of the expenses of administration. A Federal

* Fuller information is given in an annual pamphlet issued by the Department of Labour.

Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. In Prince Edward Island, where there is no provincial Act in effect, compensation is paid to Federal Government employees according to the provisions of the New Brunswick Act. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946, which makes like provision.

Free medical aid is given to workmen during disability in all provinces.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus. In all provinces, except New Brunswick, silicosis is compensated under certain conditions. The other diseases compensated vary according to the industries of the provinces.

Scope of the Acts.—The Acts vary in scope but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta.

Benefits.—Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in some provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:—

Burial expenses, \$150 in British Columbia, Manitoba, New Brunswick and Nova Scotia, \$175 in Alberta and Quebec, and \$125 in the other provinces. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster mother, as long as the children are under the age-limit, a monthly payment of \$50 in Alberta, British Columbia, Manitoba, Nova Scotia, Ontario and Saskatchewan, of \$45 in Quebec, and of \$40 in New Brunswick; in addition a lump sum of \$100 is paid in all provinces.

For each child in the care of a parent or foster-mother receiving compensation, a monthly payment of \$10 is made in New Brunswick, Nova Scotia and Quebec; of \$12 in Manitoba, Ontario and Saskatchewan; of \$12.50 in British Columbia and of \$15 in Alberta. In Alberta an additional payment of \$10 a month is made, and in British Columbia the monthly payment of \$12.50 is continued to children between 16 and 18 years of age who are attending school.

To each orphan child, \$25 a month is paid in Saskatchewan, \$20 in British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario and \$15 in the other provinces (in Alberta, an additional payment not exceeding \$10 a month may be given), with a maximum of \$90 per month to one family in Nova Scotia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British Columbia, and in New Brunswick 18, or the age when they leave school. In Manitoba, Nova Scotia, Ontario and Saskatchewan payments for children may be made up to the age of 18 if it is desirable to continue their education. In British Columbia and Manitoba payments to invalid children are

continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependents are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependents is limited to \$60 in Manitoba, \$85 in Alberta, \$45 in Nova Scotia and \$55 in British Columbia. In British Columbia, however, if there are also dependents such as widow, invalid widower or children, the maximum payable to other dependents is \$40 per month. In all provinces, compensation to dependents other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta, Saskatchewan and British Columbia, maximum benefits payable to dependents in case of death of the workman are two-thirds of the earnings. In Saskatchewan the average earnings are the maximum.

The minimum payable to a consort and one child in Quebec is \$55 per month, \$65 if there is more than one child; in Manitoba the minimum is \$12.50 per week, or if there is more than one child, \$15 per week. In Saskatchewan a widow with one child must be paid at least \$62 a month and if there are more children, \$70. In Ontario, the total monthly compensation to consort and children may not exceed \$100.

The rate for total disablement in all provinces except Saskatchewan is a weekly payment for its duration equal to $66\frac{2}{3}$ p.c. of the average weekly earnings; in Saskatchewan it is 75 p.c. Except in New Brunswick, the Acts fix a minimum weekly sum that must be paid unless earnings fall below that minimum, in which case a sum equal to the earnings is paid. This minimum is \$12.50 in Nova Scotia and British Columbia, \$15 in Alberta, Manitoba, Quebec and Saskatchewan, and \$100 a month in Ontario. For partial disablement, similar provision is made in all provinces except New Brunswick, Saskatchewan and Alberta, i.e., two-thirds of the difference in earnings before and after the accident. In Saskatchewan it is 75 p.c. of the difference. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In Nova Scotia, if there is little or no difference, in New Brunswick in any case, and in the other provinces if the difference is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based must not exceed \$3,000 in Saskatchewan, \$2,500 in Alberta, British Columbia, Manitoba, New Brunswick, Ontario and Quebec, and \$2,000 in Nova Scotia. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later, if it appears likely that their earning power would have increased, had the injury not occurred.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are therefore presented in a series of tables.

23.—Operations of the Nova Scotia Workmen's Compensation Board, 1938-47

NOTE.—Estimates for outstanding claims are not included. Statistics for the years 1917-35 are given at p. 757 of the 1938 Year Book; those for 1936 and 1937 at p. 642 of the 1947 edition.

¹ Revised since the publication of the 1947 Year Book.

Section 8.—Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Federal Department of Labour since its establishment in 1900.

A complete review of strikes and lockouts during 1946 and 1947, with analyses of the statistics under various headings, will be found in the *Labour Gazette*, March, 1947, and in a supplement to the April, 1948, issue.

Strikes and Lockouts in Recent Years.—During periods of great industrial expansion strikes usually increase, particularly when inflationary forces are at work as during the periods immediately following the two world wars. The year 1946 was one of reconversion of industry to peacetime operation. Controls on wages and prices were relaxed and the upward pressure on both was greatly increased. Weekly earnings declined when weekly hours and overtime pay were reduced, with the result that demands for increases in wage rates were made in order to maintain take-home pay and to offset increases in the cost of living. In 1947 industrial activity continued at a high level. The cost of living advanced more rapidly than

in the previous year and demands were renewed for further increases in wages. The number of strikes and lockouts recorded during 1947 showed little change as compared with the preceding year but, while the number of workers involved was only about 75 p.c. and the time loss about 50 p.c. of the 1946 totals, the time loss in 1947 was much greater than in any of the years between 1919 and 1946.

Employment in the manufacturing group of industries is much greater than in any other group. In recent years the time loss due to strikes and lockouts has been greater in this group than in all others combined. The year 1947 was an exception. The prolonged strike of coal miners throughout the fields in the Maritime Provinces, combined with a few others of relatively little importance in both eastern and western coalfields, caused more than 50 p.c. of the total strike idleness for the year. During 1947, the time loss in man-working days was 0.26 p.c. of estimated working time, as compared with 0.50 p.c. in 1946; 0.17 p.c. in 1945; 0.06 p.c. in 1944; 0.12 p.c. in 1943; 0.04 p.c. in 1939; and 0.60 p.c. in 1919.

The great variety and complexity of issues involved in strikes and lockouts in recent years present difficulties in classification for statistical purposes. Since the record was commenced the demand for increases in wages has been generally, year by year, the most important single cause of strikes. The year 1945 was an exception as most of the strike idleness in that year resulted from questions involving unionism. In 1946 and 1947, the demand for wage increases, often linked with various questions involving union security, working conditions, etc., was a central issue of the most important stoppages, and about 95 p.c. of the time loss in 1946 and 90 p.c. in 1947 resulted from these demands.

In 1947, more than 35 p.c. of the strikes were settled by direct negotiation, a larger proportion than in other recent years. Conciliation, frequently accompanied by reference to various government agencies, boards, arbitration, etc., brought about settlement of more than 35 p.c. of the stoppages during the year. In 1946, about 25 p.c. of the strikes were settled by negotiation and 50 p.c. by conciliation, etc.

31.—Strikes and Lockouts, 1938-47

NOTE.—For the years 1901-20, see the 1933 Year Book, p. 763, and for 1921-37 the 1938 Year Book, p. 763.

¹ None reported.² Less than one-tenth of one per cent.³ Includes non-ferrous metal⁴ Includes erection of all large bridges.⁵ Includes water service.⁶ This total is not the sum of the figures given above as one strike involved workers in both logging and manufacturing, and miscellaneous wood products.

Section 9.—Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada were compiled by the Department of Labour for the first time for the year 1946. Table 33 gives figures for the principal industrial groups. It shows in the second column the number of workers affected by agreements extended under the Quebec Collective Agreement Act (see Subsection 1, p. 671). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. Of the total number of workers affected by agreements, 92.6 p.c. are represented by international or national unions. A more detailed table in the *Labour Gazette*, March, 1948, as well as earlier studies of agreements in certain industries is available from the Department of Labour.

Section 10.—Wages and Hours of Labour

Subsection 1.—The Regulation of Wages and Hours of Labour

The regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject. The Nova Scotia Male Minimum Wage Act, 1945, has not been proclaimed in force.

In Nova Scotia the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, the Orders apply only to women. In Alberta there are separate Orders for men and women and also in British Columbia and Manitoba but in the latter Provinces certain Orders cover both sexes. In Quebec and Saskatchewan Orders apply to both sexes. The first Order under the New Brunswick Minimum Wage Act, 1945, applying to women workers in hotels and restaurants, became effective Mar. 1, 1948.

In Quebec, under the Collective Agreement Act, hours and wages, and also apprenticeship, family allowances and holiday provisions established by a collective agreement voluntarily entered into by employers and trade unions or groups of employees may be made legally binding by Order in Council on all employers and employed in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. On Mar. 31, 1946, 93 agreements had been generalized to apply either throughout the Province or to a certain district. These agreements covered over 200,000 workpeople and 19,900 employers. The agreements in force throughout the Province apply to the following industries: paper-boxes; corrugated boxes; men's hats; boots and shoes; fine and work gloves; lithographing; building supplies; furniture; painting; women's dresses; tanneries; taverns; men's and women's clothing; and cotton and jute bags. Other agreements concern industries in particular cities or parts of the Province. In 1945-46 the seven agreements extended for the first time affected municipal employees and commercial establishments in certain towns. In 1947 such agreements were applied to truck drivers, retail stores, shoe repairers in certain cities and to millinery workers in any part of the Province.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta provide that the wages and hours agreed upon at a conference of representatives of employers and employees called by the Minister of Labour may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work and the New Brunswick Act to construction work exceeding \$25 in value and to work on motor-vehicles.

In Ontario on Mar. 31, 1947, there were 119 Orders concerning wages and hours in force for certain industries or trades. Throughout the Province five Orders governed the brewing industry, hard furniture, ladies' cloaks and suits, and men's and boys' clothing industries. Others applied only in certain areas: to barbers in 119 municipalities, carpenters in 20, plumbers and steamfitters in eight, painters and decorators in five, and electrical workers in five; etc.

In Saskatchewan, Orders governing wages and hours cover, in one or more areas, barbers and beauty culture operators, baking, carpenters, plumbers, sheet-metal workers, sign-painters, shoe-making and repairing, garages and service stations, taxi-drivers, coal and wood, carting and storage, jewellery, etc. In 1947, the Orders for barbers in 13 areas were replaced by one covering the entire Province, and one for bakery workers in Prince Albert was made binding.

In Alberta, Orders in certain areas apply to the building trades, welders, bakers, barbers, brewing, cartage, garages and service stations, laundries, the dairy industry, etc. In 1947, Orders were made binding for employees of gasoline and service stations at Crow's Nest Pass, for carpenters in the Grande Prairie district and for bakery workers at Lethbridge, and Orders for taxi-drivers in three areas and for sheet-metal workers in Edmonton were repealed.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Up to the present, barbering and hairdressing, printing and engraving, shoe-repairing, wood-sawing, baking, laundering and dry cleaning, road trucking and hauling have been brought within its scope. Under this legislation, wages and hours have been fixed by Order in Council for the baking industry and for barbering and hairdressing.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories and, in some cases, to shops, restricts the hours of work of women and young persons or, in some provinces, of all workers. In Nova Scotia, Quebec, Ontario, Saskatchewan, Alberta and British Columbia, there are also statutes dealing only with hours of work. The Nova Scotia Act is not in force. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

Minimum Wage Regulations.—Table 34 shows the minimum rates in effect in March, 1948, for several classes of establishments in the principal cities. In Alberta and British Columbia the rates for all workers, and in Manitoba the rates for men, apply throughout the Province. In other provinces, and with respect to women in Manitoba, lower rates are in effect outside each of the indicated urban areas of the Province. The rates given apply to the hours specified or, except in Montreal and Winnipeg, to the normal work-week of the establishment, if less.

34.—Minimum Weekly Rates for Experienced Workers in the Principal Cities, March, 1948

³ Females; \$25

and offices; 54 hours in shops, beauty parlours and theatres; 60 hours in hotels.

⁴ Rates apply to 48 hours in factories, except in specified cases, and in laundries and offices; 54 hours in shops, beauty parlours and theatres; 60 hours in hotels.

⁵ In hotels, beauty parlours, theatres and amusement places rates apply to 40 hours or more; in shops to 39 hours or more; and in offices to 36 hours or more.

⁶ Minimum wage regulations not in effect in this type of establishment.

⁷ Cents per hour.

⁸ Kitchen help, 35 cents; cooks 40 cents.

Regulation of Hours and Annual Holidays.—In Alberta and Ontario there is a maximum eight-hour day and 48-hour week for the workers to whom the statutes apply. In British Columbia hours are limited to eight in a day and 44 in a week. In Saskatchewan a 1947 Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. The Saskatchewan Act covers all workers employed in, or within a five-mile radius of, any city, workers in all factories in the Province, and in shops and offices in the towns or villages within the scope of Minimum Wage Orders. In the other three above mentioned Provinces the Acts apply to most workers, except farm labourers and domestic servants.

In all provinces longer hours may be worked in an emergency or by permission of the administrative authority.

In Alberta and Nova Scotia time and one-half is payable for all work in excess of 48 hours or of the regular work-week if less, but in Nova Scotia the provision applies only to women and only where the legal minimum rate is being paid. In British Columbia time and one-half must be paid after 44 hours. In hotels and restaurants and other workplaces in the larger towns and villages of Saskatchewan time and one-half is payable after 48 hours. In most classes of industrial establishments in Quebec, time and one-half is payable after 48 hours.

Six provinces have provided for annual holidays with pay for workpeople in most industries. In five of these provinces—Alberta, British Columbia, Manitoba, Ontario and Quebec—workers are entitled to a week's holiday with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment and, in Alberta, after two years of employment. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month.

Coal miners in Alberta are entitled to one day's holiday with pay for every 23 days worked in a month (22 in February) but not more than two weeks' holiday in a year.

Excluded from the holiday provisions are farm workers in all provinces, and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act also excludes independent contractors and railway and express companies under Dominion jurisdiction. In addition, British Columbia exempts horticulture; Manitoba and Saskatchewan, ranching and market gardening; Ontario, professional workers, funeral directing and embalming; and Quebec, building trades, forest operations, public corporations, janitors and watchmen and certain part-time workers.

Subsection 2.—Statistics of Wage Rates and Hours for Various Classes of Labour*

Statistics of rates of wages and hours of labour have been collected for many years by the Dominion Department of Labour and are published in the *Labour Gazette* and, later, in annual reports supplementary to the *Labour Gazette*. The first report was issued in 1921 but the records begin, in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare wage rates in one industry with those in another. The statistics are average straight-time wage rates or average straight-time piece-work earnings and therefore do not include over-time or other premium payments.

Tables 35 and 36 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933 there was a general decrease in wage rates but increases have been general each year since that time. During the period 1939-47, the rise in the index number of wage rates amounted to 73.7 p.c.

* For more detailed information see "Wage Rates and Hours of Labour in Canada", published by the Department of Labour as a supplement to the *Labour Gazette*.

35.—Index Numbers of Wage Rates for Certain Main Groups of Industries, 1938-47

(1939=100)

NOTE.—Figures back to 1901 may be obtained from the report "Wage Rates and Hours of Labour in Canada, 1947", published by the Department of Labour as a supplement to the *Labour Gazette*. Figures for 1921-37 are given at p. 650 of the 1947 Year Book.

¹ Insufficient data.

Wages of Farm Labour.—With few exceptions, farm wage rates in Canada during 1947 continued the upward trend which has been in evidence since 1940, the year in which this wage-rate series was started. Compared with 1940, the current rates of wages paid to male hired help on farms have increased from two and one-half to three times. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by a corps of volunteer farm correspondents located throughout Canada.

41.—Average Wages of Male Farm Help per Day and per Month, as at Jan. 15, May 15 and Aug. 15, 1944-47

NOTE.—Figures for 1940-42 are given at pp. 732-733 of the 1943-44 Year Book and for 1943 at pp. 653-654 of the 1947 edition.

Subsection 3.—Census Data on Earnings and Employment

The number of wage-earners, by sex and provinces, during the 12 months prior to the Census date, June 2, 1941, together with total and average earnings is given at p. 654 of the 1947 Year Book. More detailed information on earnings and employment of wage-earners during the same period is given in Vol. VI, Census of Canada 1941, for Canada, the provinces, counties and census divisions, for urban centres of 1,000 population or over and for certain metropolitan areas. Wage-earners are there classified by occupation, industry, conjugal condition, age and sex, earnings and weeks employed. Preliminary data on the number of wage-earners by amount of earnings are available from the 1946 Census of the Prairie Provinces for urban centres of 5,000 population or over in Bulletin 7-6010.

SECTION 1. HISTORY AND ADMINISTRATION.	741		
Subsection 1. Historical Developments.....	741		
Subsection 2. Recent Developments.	743		

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of 12,883,000 (1948 estimate) thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing for export, as well as for consumption in distant portions of the country itself, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of Government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency.

Scarcely less important than transportation from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great factor in promoting solidarity among the people and this same objective is being further aided by radio. Telegraphs and telephones have done much to lessen distances and make for closer relationships—the rural telephone being of particular social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION

Section 1.—Government Control Over Agencies of Transportation*

Carriers by rail, road, water and air are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation. The Federal Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control inevitably brings with it elements of monopoly and possible over-charge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways within the jurisdiction of the Federal Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see under "Air Transport Board" below).

* This material has been compiled in co-operation with the Board of Transport Commissioners, the Air Transport Board and the Department of Transport.

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

The Board of Transport Commissioners for Canada.—An explanation of the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., is given at pp. 633-634 of the 1940 Year Book.

Powers of the Board.—With regard to transport by rail, these powers cover matters relating to the location, construction and operation of railways. The most important of these has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. Important rate adjustments, however, usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is likely to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, 1938, (as amended by 8 Geo. VI, c. 25, 1944, and by 9 Geo. VI, c. 32, 1945) and since Jan. 15, 1939, following a proclamation of the Governor in Council to that effect, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes and the Mackenzie River, as defined in Sect. 2, Subsection 1 (f) and (hh) of the Transport Act, 1938. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services which shall be maintained; every standard tariff and every amendment and supplement thereto shall require the approval of the Board before it becomes effective.

On Jan. 1, 1947, a new division was added to the organization of the Board, namely, the Bureau of Transportation Economics. This new Bureau amalgamated the Economics Division of the Board of Transport Commissioners and the Economics Division of the Air Transport Board under one head. Its main duties consist of supplying these two bodies with the result of economic studies in the general transportation field and with reports regarding the economic aspects of the particular cases submitted for determination.

The Prime Minister on June 8, 1948, announced proposed legislation with reference to Government plans for a reconstitution of the Board of Transport Commissioners in view of substantially increased responsibilities which it is expected that Board will have to assume over the coming years.

A single Act was later passed, June 16, 1948, to amend the Railway Act, the Exchequer Court Act and the Judges Act, 1946. This Act provided that a Judge of the Exchequer Court of Canada holds the office of Chief Commissioner of the Board of Transport Commissioners. Such Judge, however, while acting as Chief Commissioner, devotes his full time to the work of the Board.

The Act also provided, with a consequential amendment in the Judges Act of 1946, that in the light of the foregoing change, the Exchequer Court be increased by one, to consist thereafter of the President and four Judges, instead of the President and three Judges as at present.

The Act does not in any way change the term of appointment to the post of Chief Commissioner from a ten-year period. When a Judge of the Exchequer Court has served for this term as Chief Commissioner he will, unless his term of office is extended, return to the Exchequer Court; his successor will then be appointed from that body.

Air Transport Board.—The Air Transport Board was established in September, 1944, as a result of an amendment to the Aeronautics Act (8 Geo. VI, c. 28). The Board's main function is the economic regulation of commercial air services in Canada, which includes the issue of licences to all such services and the subsequent regulation of the licensees in respect of tariffs and schedules, public liability, and standards of service to the public. The latest regulations respecting commercial air services made by the Air Transport Board, under the Aeronautics Act, were approved by Order in Council P.C. 972 of Mar. 25, 1947, and became effective on Apr. 9, 1947. These Regulations, which were made pursuant to amendments to the Aeronautics Act of Dec. 15, 1945 (9 and 10 Geo. VI, c. 9), deal with the classifications of air carriers, applications for licences, accounts, records and reports, traffic, tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of Directives, which are made consistent with the Regulations.

In addition to the regulatory function, the Act lays upon the Board the duty to advise the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation.

The Board consists of three members, including the chairman, and the organization of the Board's staff comprises a Secretary's Branch, which includes the Administrative and Licensing Divisions; a Legal Adviser, who is the Chief Legal Adviser to the Canadian Government on all matters of domestic and international air law; an Examiner, who conducts public hearings by order of the Board; a Traffic Branch, and a Research Aeronautical Engineering Branch.

Financial and operating statistics are collected under the authority of the Board's Regulations by the Bureau of Transportation Economics which was established, in 1947, under the administration of the Board of Transport Commissioners and serves that Board as well as the Air Transport Board.

Up to Dec. 31, 1947, the Board had issued 24 licences for domestic scheduled air services, totalling 22,266 route miles; 22 licences for international air services, totalling 4,707 route miles. In addition to the above, 225 licences had been issued for non-scheduled commercial air transport services, and 27 licences for commercial air enterprises not involving the transport of passengers or goods.

Section 2.—Government Control Over Agencies of Communication*

The development and control of radio-communication in Canada from the beginning of the century is outlined at pp. 644-646 of the 1945 Year Book.

The present phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, 1936, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see pp. 772-777). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

Under the Radio Act, 1938, radio stations including broadcasting stations may be established only under, and in accordance with, licences granted by the Minister of Transport, and, with the exception of those matters covered by the Canadian Broadcasting Act, 1936, radio-communications are regulated under the Radio Act, 1938, and annexed Regulations. Licences for radio stations may be issued only to British subjects or to companies or corporations created or incorporated under the laws of the Dominion of Canada or any of the provinces thereof or any country of the British Commonwealth.

In addition to the requirements of these Acts and Regulations, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such Regional Agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council P.C. 2526, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

Landline telegraph and telephone tariffs and tolls, charged by Dominion incorporated companies, are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by individuals or companies, for radio telephone or telegraph communications within Canada, are likewise regulated by the Board of Transport Commissioners, under the provisions of the Railway Act, and the Regulations made under the Radio Act, 1938.

* Revised by the Department of Transport.

PART II.—RAILWAYS*

The treatment of rail transportation is divided into three Sections dealing, respectively, with steam railways, electric railways and express companies.

Section 1.—Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

Historical.—A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Other details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book. An article at pp. 648-651 of the 1945 edition deals with the wartime role of the steam railways of Canada.

Subsection 1.—Mileage and Equipment of Steam Railways

Although construction was begun in 1835 on the first railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western Railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

During the past decade, there has been a tendency for railway mileages to decline slightly because of the abandonment of unprofitable lines. Of the 42,335 miles of single track operated in 1946, 21,556 were Canadian National lines.

* Revised and checked by G. S. Wrong, Director, Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

1.—Record of Steam-Railway Mileage, 1900-46

NOTE.—Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

Subsection 2.—Finances of Steam Railways

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings, and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the Subsection. Further statistics of revenue are included in Table 9, where they are shown in relation to traffic. Statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, may be found in the annual report "Statistics of Steam Railways of Canada", published by the Dominion Bureau of Statistics, Ottawa.

Capital Liability.—The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

3.—Capital Liability¹ of Steam Railways, 1927-46

NOTE.—Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book.

¹ Does not include Canadian railway capital owned by Canadian railways.

Capital Investment.—The reduction in capital liability during 1946 as shown in Table 3 compared with an increase in investments in road and equipment in Table 4 reflects the improved net income earned during the war years. The two major railways showed a net reduction of over \$41,000,000 and the Canadian National purchased the Manitoba Railway, thus retiring stocks and bonds carried by it at \$7,000,000. The investment account in recent years has also been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.

¹ Includes \$74,728,521 transferred to depreciation reserve and a credit of \$34,534,220 transferred to premium on capital and debenture stocks. ² Details of this item are given in the annual report "Statistics of Steam Railways of Canada" issued by Transportation and Public Utilities Division of the Bureau of Statistics.

Earnings and Expenses.—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to over 90 p.c. between 1917-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the First World War. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period from 1938 to 1943 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the Second World War and a subsequent acceleration in gross earnings. A steadily rising trend has been in evidence since 1943.

5.—Earnings and Operating Expenses of Steam Railways, 1936-46

NOTE.—Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book. The analyses per mile of line and per train mile go back to 1908 only and are given for 1908 to 1916 at p. 435 of the 1916-17 Year Book. Corresponding figures for the years 1915 to 1925 are given at p. 550 of the 1941 Year Book and for 1926 to 1935 at p. 555 of the 1942 Year Book.

Railway Salaries and Wages.—The number of employees registered an increase in 1946 over 1938 of 41.2 p.c. while salaries and wages increased by 103.4 p.c. The latter rise was due to an increase in time worked per employee as well as to increased rates of pay. Maintenance of equipment employees, on hourly rates, worked 11.5 p.c. more hours and were paid 52.7 p.c. more wages per employee and transportation employees worked an average of 9.3 p.c. more hours for an increase in pay of 46 p.c.

7.—Steam Railway Employment and Salaries and Wages, 1936-46

NOTE.—Corresponding figures for the years 1912-35 are given at p. 551 of the 1941 Year Book.

¹ Includes employees and wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and 2 p.c. to 5 p.c. of total salaries and wages. ² Includes approximately \$10,000,000 wages earned in 1943.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Federal and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the Federal or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the First World War, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railways. As these bonds mature or are called they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Federal Government guarantee. In this manner, bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and New Brunswick have been eliminated in recent years.

¹ Does not include \$3,314,321 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Steam Railway Traffic

Passenger and Freight Traffic.—Table 9 shows the passenger and freight statistics for all steam railways for the years 1936-46. A separate analysis is given in Subsection 4 of the operations and traffic of the Canadian National Railways, since, being controlled by the Federal Government, the information is considered of special interest.

9.—Statistics of Passenger and Freight Services and Revenue Receipts, 1936-46

NOTE.—Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for 1916-30 at pp. 652-653 of the 1937 edition and for 1931-35 at pp. 592-593 of the 1942 edition.

¹ Includes express, baggage, mail, etc., cars. ² Duplications included. ³ Includes cabooses miles and excludes miles made in passenger and non-revenue trains. ⁴ Duplications eliminated; see Table 10 for details of freight carried.

Commodities Hauled.—Revenue freight hauled by the railways declined to 139,256,125 tons in 1946 from 147,348,566 tons in 1945, or by 5.5 p.c. The peak was reached in 1944 when 155,326,332 tons were transported. The average haul was 430 miles in 1945 but dropped to 397 miles in 1946 with a consequent larger decline in ton-miles. The principal decreases in 1946 traffic from 1945 occurred in wheat (a decrease of 6,707,674 tons to 12,195,199 tons) and in other grains, animal products, lignite coal and coke, ores and concentrates, automobiles and other manufactures. (See Table 10.) Gasoline and petroleum products declined from 8,056,963 tons in 1945 to 4,608,415 tons in 1946; during the war years there was a very heavy intransit movement on Canadian lines between United States stations but as normal petroleum distribution facilities such as tankers and pipe lines were restored or improved, this movement was greatly reduced.

10.—Commodities Hauled as Freight on Steam Railways, 1942-46

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National System, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

¹ Included with lignite prior to 1945.

Railway Accidents.—All injuries to passengers are included in Tables 11 and 12 but only injuries that keep the employee from his work for at least three days during the ten days following the accident are recorded for employees. "Others" in Table 11 include trespassers walking along tracks, stealing rides, etc., also persons crossing tracks at level crossings.

11.—Passengers, Employees and Others Killed or Injured on Steam Railways, 1936-46

NOTE.—For the years ended June 30, 1888 to 1900, see Canada Year Book, 1910, p. 378; for the years 1901 to 1919, the 1922-23 edition, p. 635; for 1920 to 1935, the 1938 edition, p. 662.

1946.....	3	526	105	11,406	219	706	327	12,638

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau of Statistics vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

Subsection 4.—The Canadian National Railways System

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Federal Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways; to Mar. 31, 1947, the total cost of this railway was \$33,633,108, exclusive of the expenditure of \$6,274,113 on the terminal at Port Nelson, Man., and a loss of \$4,117,063 on operation. The operating deficit for the fiscal year 1946-47 was \$466,896.

The major portion of Federal Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces. The terminals at Churchill, Man., consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of Canada and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

In view of the interest in the publicly owned railway system, certain salient statistics are presented showing the assets, debt, operating accounts, mileage and traffic for the system. More detail is available from the special Bureau of Statistics' report "Canadian National Railways, 1923-1946".

13.—Assets of the Canadian National Railways System, as at Dec. 31, 1922 and 1946

¹ Includes demand loans and deposits.
Federal Government.

² Includes 1946 deficit of \$8,961,570 receivable from
³ Increase in current liabilities \$25,563,677.

Capital Structure and Debt.—The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Federal Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Federal Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public. Table 14 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent, largely, temporary loans and explain the large increases during the war years.

14.—Debt of the Canadian National Railways, as at Dec. 31, 1937-46

NOTE.—Figures for the years 1922-36 are given at p. 591 of the 1942 Year Book.

¹ Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book).

² Includes Federal Government Proprietors Equity and capital stock held by the public; for detail see "Canadian National Railways", Dominion Bureau of Statistics Report.

Operating Finances.—Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire System, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Federal Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 15 as fixed charges. Loans of \$270,037,438 for capital and \$373,823,120 for deficits were cancelled.

15.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railways,¹ 1936-46

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. For figures for the years 1911-25, see p. 660 of the 1936 Year Book and for 1926-35, see p. 590 of the 1942 edition.

¹ Excludes electric lines.

² Work service excluded.

Section 2.—Electric Railways*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the electric railways are owned and operated by the municipalities.

Statistics presented, cover the urban and interurban operations of the electric railway systems.

Subsection 1.—Equipment of Electric Railways

The single overhead-trolley system is used by all electric railways but Edmonton, Montreal, Winnipeg and a few other municipalities have begun to use trackless trolley-buses (77 of these buses being in service in 1946). Of the 33 systems, 23 operated both electric cars and motor-buses in 1946, the buses numbering 1,491. The main advantage of the bus is that it is not confined to a fixed route and, in the case of both motor-buses and trolley-buses, the expense of track maintenance is eliminated.

A summary of the equipment operated by electric railway companies is given in Table 18.

Subsection 2.—Finances of Electric Railways

When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from the following table. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions, the gross revenues of electric railways

* For further details see "Electric Railways of Canada", 1946, published by the Dominion Bureau of Statistics.

have continued to increase since the low point reached in 1933, and very marked increases have been shown from 1940 to 1945. The ratio of expenses to receipts has risen from a low of 62.97 p.c. in 1942 to 86.33 in 1946.

19.—Financial Statistics of Electric Railways, 1936-46

NOTE.—Available figures for the years 1901-07 are given at pp. 608 and 609 of the 1926 Year Book; for the years 1908-18 at pp. 681 and 682 of the 1936 edition; and for 1919-35 at p. 665 of the 1938 edition.

¹ Mainly reduction, \$1,602,500 stock Hamilton Street Railway.

Subsection 3.—Electric Railway Traffic

The passenger mileage travelled by electric cars in 1946 amounted to 130,365,430, by trackless trolley-buses 2,912,964 and by motor-buses 43,977,690. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to increased traffic resulting from improved conditions, and the curtailment of passenger automobile traffic as a result of the War. The 1,344,916,773 passengers carried in 1946 was by far the greatest traffic ever handled by these systems, the increase over 1945 being 2.2 p.c. The total number of passengers was more than double pre-war volume.

20.—Statistics of Electric Railway Operations, 1936-46

NOTE.—Figures will be found at p. 676 of the 1933 Year Book for the years 1901-10; at p. 681 of the 1936 edition for the years 1911-18; and at p. 667 of the 1938 edition for 1919-35.

Section 3.—Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus, in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of $2\frac{1}{2}$ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Federal Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in the Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

The amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter, are shown in Table 22 under the heading "Express Privileges".

22.—Mileages Operated, Revenues and Expenses of Express Companies, 1936-47

NOTE.—Corresponding figures for the years ended June 30, 1911-18, are given at p. 673 of the 1927-28 Year Book, and for the years 1919-35 at p. 669 of the 1938 edition.

PART III.—ROAD TRANSPORTATION*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motor-vehicles are treated as related features of transportation. After an introductory section, which summarizes briefly provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances and traffic, similar to the treatment extended to other forms of transportation.

Section 1.—Provincial Motor-Vehicle and Traffic Regulations†

NOTE.—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 701-705.

General.—The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments. Regulations that are common to all the provinces are summarized here:—

Operator's Licences.—The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.—In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.—In all provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour, are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid and disclosed his name to the injured party.

* Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, Director, Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

Penalties.—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motor-vehicle.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here. For the most important features see the annual bulletin published by the Dominion Bureau of Statistics.

Safety Responsibility Legislation.—Between the years 1930 and 1933 all the provinces of Canada, with the exception of Quebec, enacted legislation under this heading which is sometimes referred to as Safety Responsibility Legislation, and at other times as Financial Responsibility Legislation. The following paragraphs give the latest amendments to this Legislation and the authorities responsible for the administration of motor-vehicles.

Prince Edward Island.—Provision was made in the Prince Edward Island Traffic Act, 1930, for cancellation of the licence of any person unable to satisfy judgment against him arising out of a motor-vehicle accident. Licence is to be reissued only when proof of financial responsibility is made to the Provincial Secretary. In 1946, "Unsatisfied Judgment Fund" legislation was passed whereby the injured party in an automobile accident might receive compensation from this Fund where the person at fault was unable to satisfy the judgment against him.

Administration.—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (1936, c. 2) and amendments.

Nova Scotia.—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

New Brunswick.—*Administration.*—Motor Vehicle Division, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (1934, c. 20) and amendments.

Quebec.—*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (R.S.Q. 1941, c. 142) and amendments.

Ontario.—Safety Responsibility Legislation or Financial Responsibility Legislation as it is sometimes referred to came into force in Ontario in September, 1930.

At the 1947 session of the Ontario Legislature, the Highway Traffic Act was amended so as to provide for the automatic suspension of the driver's licence and motor-vehicle permit of: (1) every person convicted of any offence under the Act if any personal injury or property damage occurs in connection therewith; (2) every person convicted of any offence under the Act if the penalty imposed includes suspension of driver's licence or owner's permit; (3) every person convicted of a criminal offence involving the use of a motor-vehicle.

The suspensions remain effective until proof of financial responsibility is filed. The object of this law is to encourage safe driving by imposing this additional penalty on persons convicted of offences arising out of motor-vehicle accidents. Provision is also made for the forfeiture to the Crown of a motor-vehicle operated while the permit for same is under suspension. These amendments became effective July 1, 1947.

The Act was also amended to require the payment of all judgments arising out of motor-vehicle accidents either for personal injuries or property damage up to a maximum of \$5,000 for one person or \$10,000 for two persons and \$1,000 for property damage arising out of one accident. If judgments are not satisfied by the judgment debtors, provision is made for their payment out of an Unsatisfied Judgment Fund to be created. The judgment debtor is then prohibited from holding a driver's licence or having a motor-vehicle registered in his name until the judgment debtor repays in full to the Fund the amount paid out, together with interest at 4 p.c. from the date of such payment, and also files proof of ability to satisfy a judgment for \$11,000 which may arise out of any future accidents. This part of the Act is to be brought into effect by proclamation.

Administration.—Motor Vehicles Branch, Department of Highways, Toronto.
Legislation.—The Highway Traffic Act (R.S.O. 1937, c. 288) and amendments. The Public Vehicle Act (R.S.O. 1937, c. 289) and the Commercial Vehicle Act (R.S.O. 1937, c. 290).

Manitoba.—In 1945, the Financial Responsibility Law of Manitoba was repealed and replaced with new Safety Responsibility Legislation.

Features under this Legislation include the immediate and automatic impoundment of any motor-vehicle after an accident if the operator is unable to produce proof of financial responsibility at the time. Impoundment continues until the owner or driver settles any claims for damages or bodily injury sustained, or deposits with the Provincial Treasurer security sufficient to cover any judgment which may be recovered or, until the owner of the vehicle has filed proof of financial responsibility for the future.

Driving privileges of financially irresponsible motorists are indefinitely suspended pending settlement of damage claims or deposit of security and the filing of proof of financial responsibility.

A trust fund called the Unsatisfied Judgment Fund provides for payment of judgments of bodily injuries and deaths in cases where the judgment debtor does not pay. This Fund also provides for the victims of hit-and-run motorists.

Administration.—Provincial Treasurer, Winnipeg. *Legislation.*—The Highway Traffic Act (R.S.M. 1940, c. 93) and amendments.

Saskatchewan.—Financial Responsibility Legislation in this Province was placed on the Statutes in 1933 and provides that, where a judgment is rendered in any court in Canada for damages on account of death or injury to any person or on account of damage to property in excess of \$50 occasioned by a motor-vehicle and the person fails to satisfy the judgment within 30 days from the date upon which it becomes final, the Board shall suspend the operator's or chauffeur's licence issued to the person against whom the judgment is rendered and the registration of every motor-vehicle registered in his name. Judgment must be satisfied before

licences are reinstated and the person so liable must give proof of financial responsibility for future motor-vehicle accidents in the amount of \$11,000 for a period of three years.

The Automobile Accident Insurance Act was passed by the Legislature and placed on the Statutes during 1946 and provides collision insurance, personal injury insurance, and public liability and property damage insurance in the amounts as set forth in the said Act. Saskatchewan citizens are provided with insurance against death or personal injury resulting directly from motor-vehicle accidents. Every person is automatically provided with public liability and property damage insurance to the extent of the amount paid for personal injuries or property damage which is payable by the insurance office.

Administration.—Treasury Department, Taxation Branch, Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (1945, c. 98).

Alberta.—At the 1947 Session of the Alberta Legislature, a Statute was passed, viz., the Automobile Accident Indemnity Act (later the title was amended to the Motor Vehicle Accident Indemnity Act), the main provisions of which are: the suspension of the licences of all drivers directly or indirectly involved in an accident which results in bodily injury, or in damage to property exceeding \$25 in value, if proof of financial responsibility on the part of the driver is not forthcoming and; an Unsatisfied Judgment Fund is set up on the basis of a fee of \$1 per year, collected for each licensed motor-vehicle, in addition to the regular registration fee. Action may be taken against the Superintendent of the Fund where a judgment for an amount exceeding \$100 has been obtained following a motor-vehicle accident, if the assets of the judgment debtor are insufficient to meet the award of the court, or in cases where the driver or owner of the motor-vehicle causing the accident is unknown. Minor amendments were made to this legislation at the 1948 Session of the Alberta Legislature.

Administration.—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) and amendments, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

British Columbia.—Financial Responsibility Legislation which has been in effect in this Province since 1932 provides for the suspension of driver's and motor-vehicle licences on failure to pay judgments; for contravention of certain convictions in connection with speed, and under Section 285 of the Criminal Code, etc., and such suspensions remain in effect until the party concerned files proof of financial responsibility, which he is required to keep in full force and effect. In 1947, new legislation was enacted which added to the Financial Responsibility Legislation already in effect, providing for the impounding of motor-vehicles which were involved in motor-vehicle accidents, and for which, at such time, a Motor-Vehicle Liability and Property Damage Insurance could not be produced.

Administration.—Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

Yukon.—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

Northwest Territories.—*Administration.*—Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

Section 2.—Roads and Vehicles

Subsection 1.—Roads and Highways

With the rapid increase in the percentage of motor-car owners to population up to 1941, the demand for improved roads has become more and more insistent during the last 30 years. Furthermore, the advantages to be gained by attracting motoring tourists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car and truck has been of special economic advantage has been in rural areas. As a result, according to the Census of 1941, there was one motor-vehicle for every 1.8 farms. This widespread rural ownership of automobiles and trucks has, in turn, brought about an improvement of secondary rural roads.

Table 1 of road mileages includes all roads under provincial jurisdiction and in National Parks, local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway provides a strategic link between Eastern and Western Canada that permits motorists to traverse the Dominion without entering United States territory.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1946 the total number of miles of street reported was 14,326, composed of: 3,368 miles of bituminous pavements; 918 miles of portland cement concrete; 2,044 miles of bituminous surfaces; 3,311 miles of gravel and crushed stone; and 390 miles of other surfaces; making a total of 10,031 miles of surfaced streets and 4,295 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

1.—Classification of Highways, by Provinces, 1946

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures. Dashes indicate that no mileages were reported under corresponding stub items.

² Includes 1,461 miles of gravel road of the Northwest Highway System in N.W.T. and Yukon.

³ Includes road allowances.

The Alaska Highway.—The Alaska Highway, a 1,600-mile roadway, 24 to 36 feet wide, extends from Fort St. John, B.C.,* through White Horse, N.W.T., to Fairbanks, Alaska. It was virgin territory and a pioneer air route in the spring of 1942; on Nov. 20, 1942, it was officially opened for wheeled traffic. About 10,000 United States engineer troops and 4,000 civilians, of whom half were Canadians, hewed their way through the bush, bridged the rivers, overcame mountain grades and surfaced a roadbed, to permit a continuous journey by car. The maximum grade in hill country is 10 p.c.; in foothill country, 5 p.c. The Federal Government supplied the right-of-way and exempted all shipments of construction equipment and material from customs duty and the United States Government carried out the work. On Apr. 3, 1946, the Canadian section of the Highway, from Edmonton to the Alaska border, together with the Northwest Staging Route airfields, telephone system and other defence projects (see 1945 Year Book, pp. 706 to 711) were taken over by Canada from the United States under agreement between the two countries.

The Northwest Highway System, as it is now called, is presently operated by the Canadian Army, but is open for civilian traffic. Permits to travel over the highway are no longer required.

Subsection 2.—Motor-Vehicles

Registration.—Automobiles were registered in Canada for the first time in 1904 and Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913 and Yukon in 1914.

* Dawson Creek, about 30 miles to the southwest, is the railhead from which supplies are trucked in to Fort St. John. The existing road between Dawson Creek and Fort St. John has been improved and to all intents and purposes forms part of the main highway.

In 1905, only 565 motor-vehicles were registered in Canada, by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048. With the exception of 1931-33 an annual increase was in evidence until 1941 when 1,572,784 motor-vehicles were registered. While the number of commercial vehicles continued to increase during the war years a considerable decline was shown in passenger cars due to restrictions on manufacture and the rationing of tires and gasoline. However, post-war recovery was rapid and a new peak of 1,622,463 motor-vehicles was established in 1946, including 1,234,006 passenger cars, 355,095 trucks, 5,788 buses, 17,163 motorcycles and 10,411 miscellaneous vehicles. The repatriation and sale of military vehicles, plus restored production and imports, contributed to the improvement of 7.8 p.c. or 125,382 vehicles over 1945. New motor-vehicles sold in Canada during 1946 totalled 120,044, comprising 77,742 passenger cars and 42,302 trucks and buses.

Revenues from motor-vehicle licences, operators' permits, etc., exclusive of Quebec Province which failed to report, amounted to \$30,236,468 in 1946 compared with \$23,992,834 in the preceding year.

2.—Motor-Vehicles Registered, by Provinces, 1936-46

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given at p. 668 of the 1937 Year Book.

¹ Includes taxis.

² Includes service cars, tractors, etc.

³ Included with trucks.

Apparent Consumption of Automobiles.—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor-vehicle sales in Canada are given at pp. 821-823 of this volume. The figures as now presented for the years 1939-47 (Table 4), are not quite comparable with earlier statistics as they have been revised and improved in several respects over this period.

4.—Apparent Supply of New Automobiles, 1939-47

¹ Does not include repatriated Armed Forces vehicles sold to public.

² Does not include military vehicles

Finances of Road Transportation.—The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 714 and revenues of motor-carriers at p. 711.

Expenditures on Roads and Highways.—Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities. During the war years, capital expenditures on highways, bridges and ferries have shown a decided drop as compared with the years immediately preceding the War. On the other hand, maintenance expenditures have increased considerably.

5.—Construction, Maintenance and General Expenditures on Rural Highways, Bridges and Ferries in Canada, by Provinces, 1942-46

NOTE.—Provincial expenditures are for their respective fiscal years. Figures for each year since 1931 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Provincial Government Revenues from Motor-Vehicles.—The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of Provincial Government income. In every province licences or permits, duly issued by the provincial authorities, are required for: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and to Mar. 31, 1947, there

was also a Federal tax of 3 cents but this was withdrawn on that date and for the most part provincial taxes were increased to absorb the Federal rate. The rates at present in effect are: for each of the three Maritime Provinces 13 cents; Quebec and Ontario 11 cents; Manitoba 9 cents; Saskatchewan 10 cents; Alberta 9 cents; British Columbia 10 cents and Yukon 3 cents. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 6. Federal Government revenues from import duties, excise and sales taxes are not included.

6.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor-Vehicles, 1946, with Comparative Totals for 1945

NOTE.—Provincial Governments report for their respective fiscal years, see Table 1, p. 706.

² Details for Quebec were not supplied by the Province.

Motor-Carriers.*—The lack of statistical information in regard to the increasing amount of passenger and freight traffic on the highways of Canada led to the institution of a census of motor-carriers in 1941. The carriers were divided into two main classes: (1) passenger and (2) freight. Each of these was subdivided into two classes: (a) carriers with revenues less than \$20,000, and (b) carriers with revenues of \$20,000 or over. Bus companies handling urban traffic exclusively were compiled as a class. Many street railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric railway statistics. Licensed carriers doing highway construction work, building air fields, etc., were excluded from the compilations. Taxi operators and urban delivery trucks also were excluded, except where their operations included inter-urban business. Carriers operating as both passenger and freight carriers were classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies were small percentages of their total revenues.

* Statistics of traffic carried are given at p. 712, under Section 3, Road Traffic. For statistics by provinces see the annual report, "Motor Carriers, Freight-Passenger", obtainable from the Dominion Statistician, Ottawa. Price 10 cents.

Operators with revenue of less than \$8,000 in 1941 were excluded from the 1942 and subsequent compilations. The figures given below are, therefore, not comparable in all respects with those for 1941 published at pp. 602 and 603 of the 1943-44 Year Book.

7.—Capital, Revenues, Employees and Equipment of Motor-Carriers, 1945 and 1946

NOTE.—Large freight carriers include those with annual revenues of \$20,000 or over; small freight carriers those with annual revenues of from \$8,000 to \$20,000.

Subsection 3.—Road Traffic

Up to the present the motor-vehicle has affected passenger traffic of the steam and electric railways more than freight traffic. This diversion of passenger traffic has been effected largely by the private automobile, although the motor-bus is rapidly becoming more important and now operates between all large centres. The motor-truck also carries a considerable amount of freight.

As explained at p. 710, certain statistics in regard to motor-carriers are collected, and those relating to freight and passengers carried are presented in Table 8. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates; consequently these data are not very informative. A difficulty in compiling weights, which is quite understandable, is that much traffic was carried on a load basis and not a weight basis. Records of passengers appear to be fairly complete, possibly because tickets were sold and accounted for, and the unit was not so complex as for freight carried.

8.—Traffic Carried by Motor-Carriers, 1945 and 1946

NOTE.—Large freight carriers include those with annual revenues of \$20,000 or over; small freight carriers those with annual revenues of from \$8,000 to \$20,000.

Motor-Vehicle Accidents.—Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Health and Welfare Division of the Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from injuries and these would be included in the fatalities of the vital statistics shown in Table 9; also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables 9 and 10 are not in complete agreement.

9.—Deaths Resulting from Motor-Vehicle Accidents, by Provinces, 1936-46

NOTE.—This table was compiled in the Health and Welfare Division, Dominion Bureau of Statistics. Figures for the years 1926-35 will be found at p. 378 of the 1941 Year Book.

Gasoline Consumption.—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates, in a general way, the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Figures to the end of 1940 show a steady increase in gasoline sales since depression years. Later figures are, of course, materially affected by the conservation measures taken in 1941, and the system of gasoline rationing effective from April, 1942 to August, 1945.

PART IV.—WATERWAYS*

The Canada Shipping Act.—Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

Section 1.—Equipment and Facilities

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals and harbours. Subsection 5 is added giving figures of administrative activities regarding pilotage service, steamship inspection and personnel shipped and discharged.

Subsection 1.—Shipping

Since all waterways including canals and inland lakes and rivers are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of Canada is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

Canadian Registry.—Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British Ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see pp. 732-741. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Federal Government, see pp. 720-723.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; shipping subsidies by the Director of Steamship Subsidies, Department of Trade and Commerce; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation Division, Dominion Bureau of Statistics.

1.—Vessels on Canadian Shipping Registry, by Provinces, as at Dec. 31, 1941-45

NOTE.—Figures for the years 1935-39 are given at p. 581 of the 1941 Year Book and for 1940 at p. 690 of the 1947 edition.

Subsection 2.—Aids to Navigation and Miscellaneous Works

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours — a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 721. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy, at pp. 768-770.

Aids to navigation, excepting very minor ones, are listed in three annual publications of the Department of Transport covering the Atlantic Coast, Inland Waters and Pacific Coast, respectively. A summary table showing marine danger signals maintained in Canada during the fiscal years 1929-40 is given at p. 581 of the 1941 Year Book.

2.—Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1942-48

NOTE.—In addition to the aids to navigation listed, approximately 8,960 unlighted buoys, balises, dolphins, and beacons are maintained. The figures are supplied by the Department of Transport.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring ice break-up.

3.—Duration of the Season of Open Navigation on the St. Lawrence Ship Channel, 1933-47

NOTE.—Figures for the years 1882-1911 are given at p. 756 of the 1934-35 Year Book and for 1912-32 at p. 615 of the 1942 edition.

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Subsection 3.—Canals

Before the period of extensive railway construction, which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa River, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages and, to eliminate the toil of unloading, transporting and reloading at the portages, canals were constructed.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700. Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the nineteenth century increased domestic and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada and, even more since the growth of motor-vehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River Route, are playing a less important part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Federal Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake

Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron; and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,844 miles, the total of actual canal being 509 miles.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information may be found in the bulletin *Canals of Canada*, published by the Department of Transport.

The following table shows the length and lock dimensions of canals under the administration of the Department of Transport, as at the end of 1947.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 feet) at Selkirk on the Red River, Man., and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

¹ Navigable depths are occasionally less at times of extremely low water.

² Minimum depth

between locks 23 ft.

³ Notice must be given by vessels of more than 6 feet 10 inches draught.

⁴ Marine railways in this section limit navigation to vessels 60 feet long 13.5 feet wide and 4.0 feet draught.

⁵ Minimum depth of canal with Lake Ontario at elevation 244 ft. above sea-level is 9.5 ft.

⁶ The depth of canal prism is 17 ft.

Subsection 4.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours coming under the direct supervision of the Department of Transport.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

5.—Facilities of Six of the Principal Harbours, as at Dec. 31, 1947

NOTE.—The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

National Harbours Board.—A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately \$225,000,000): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 19, p. 730.

Public Harbours and Harbour Masters.—As stated above, there are 300 public harbours in Canada, created by proclamation under Part X of the Canada Shipping Act, 1934. These harbours are under the jurisdiction of the Minister

of Transport and are administered under rules and regulations approved by the Governor in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Act.

Graving Docks.—The Department of Public Works of the Federal Government has constructed five dry docks. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. Under the Dry Dock Subsidies Act (9-10 Edw. VII, c. 17, 1910), several docks have been subsidized by payments of 3 to 4½ p.c. per annum on the original cost for a given number of years, as shown in Table 7.

6.—Dimensions of Graving Docks Owned by the Federal Government

Subsection 5.—Marine Services and Operations of the Federal Government

The services covered by this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

Steamship Inspection.—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading or unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers.

Pilotage.—This service functions under the provisions set forth in Part VI of the Canada Shipping Act, 1934. Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, 9 of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, Churchill, and British Columbia) are under the Minister of Transport as pilotage authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

Table 9 shows, by major ports, the number and aggregate tonnage of ships using pilots during the fiscal years 1945-46 and 1946-47. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa district.

9.—Pilotage Service by Districts, Years Ended Mar. 31, 1946 and 1947

1947.....	43,973	42,205

Canadian Government Merchant Marine.—The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine, Ltd., consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356, the total capital recovery of \$5,422,565 being made up as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on 4 vessels lost, amounting to \$2,111,475; (3) the sale of 6 vessels to the Canadian National (West Indies) Steamships, Ltd., for \$933,072.

The charter of the Canadian Government Merchant Marine, Ltd., and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court.

Canadian National (West Indies) Steamships, Ltd.—In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V., c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd.

At the end of 1947, the Canadian National Steamships, Ltd., owned and operated the following ten vessels between Canada and the British West Indies.

R.M.S. <i>Lady Nelson</i>	S.S. <i>Canadian Conqueror</i>
R.M.S. <i>Lady Rodney</i>	S.S. <i>Canadian Highlander</i>
M.V. <i>Canadian Cruiser</i>	S.S. <i>Canadian Leader</i>
M.V. <i>Canadian Challenger</i>	S.S. <i>Canadian Observer</i>
M.V. <i>Canadian Constructor</i>	S.S. <i>Canadian Victor</i>

During the Second World War three ships of the Canadian National Steamships, Ltd., famous "Lady" fleet, the *Lady Drake*, *Lady Somers*, and *Lady Hawkins* were destroyed through enemy action. The remaining two, *Lady Rodney* and *Lady Nelson* were placed under charter with the Department of National Defence to serve as troop and hospital ships respectively.

The *Lady Rodney* returned to regular peace-time service on July 20, 1947, while her sister ship the *Lady Nelson* made her first post-war voyage on Aug 21, 1947.

During 1946 and 1947 the Canadian National Steamships, Ltd., purchased three diesel vessels, the M.V. *Canadian Cruiser*; M.V. *Canadian Challenger*; M.V. *Canadian Constructor*. Each has accommodation for 12 passengers, and cargo facilities which provide 16,000 cu. ft. of refrigerator space for perishable goods, and 370,000 cu. ft. for general cargo.

The S.S. *Lorne Park*, S.S. *Cartier Park*, and S.S. *Maisonnewe Park* which the Canadian National Steamships, Ltd., operated under bareboat charter from the Park Steamship Company Limited, were purchased in January, 1947, and renamed the *Canadian Leader*, *Canadian Victor* and *Canadian Highlander*, respectively.

The S.S. *Chomedy* and S.S. *Colborne*, formerly owned by the Company, were sold to other interests.

11.—Financial Statistics of Canadian National (West Indies) Steamships, Ltd., 1937-47

NOTE.—Statistics for the years 1929-36 are given at p. 620 of the 1942 Year Book.

Section 2.—Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of waterborne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvements of waterways are concerned, those of the Federal Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, Ltd., has come almost entirely from private sources. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic.

Capital Expenditures.—So far as capital expenditures on Canadian waterways are concerned, the only figures available are those compiled from the Balance Sheet of the Dominion or the annual reports of the Departments of Transport, Public Works and Finance, but such investments or capital expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the Consolidated Deficit Account as annual expenditures and not to capital account. Table 12, which shows capital expenditures on canals, marine service and miscellaneous water-transport facilities to have reached the grand total of over \$383,772,000 must be interpreted with the above qualifications in mind. In Table 13 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1946 and 1947: these are in addition to the capital expenditures of Table 12. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 12 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 14 shows the amounts advanced by the Federal Government to the Harbours Boards for capital expenditures from 1945 to 1947. The total for 1947 represents a decline of 11 p.c. from 1946.

12.—Capital Expenditures of the Federal Government on Canals, Marine Service and Miscellaneous Water Transport Facilities, as at Mar. 31, 1946 and 1947

NOTE.—Compiled from the Annual Reports of the Department of Transport, the Department of Finance and the Department of Public Works.

Waterway Expenditures and Revenues on Consolidated Fund Account.—

Expenditures under this heading (Tables 15 to 17) are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Ltd., and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 20. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 19. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board, is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$4,803,130 in 1947. Revenues in connection with waterways of the Department of Transport and the Department of Public Works are shown in Table 18 p. 729.

15.—Expenditures on Canals Charged to Consolidated Deficit Account, Years Ended Mar. 31, 1946 and 1947

NOTE.—Compiled from the Annual Reports of the Department of Transport.

Canadian Maritime Commission.—By authority of an Act (11 George VI, c. 52) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services. Under the Act, the duties of the Commission are listed as follows:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

Since the Canadian Maritime Commission was created, it has assumed all responsibilities for the administration of steamship subventions which had formerly been under the jurisdiction of the Department of Trade and Commerce.

As of Feb. 1, 1948, the Park Steamship Company, a Crown Company formed to administer and operate wartime shipping constructed in Canada as a war measure, was transferred from the Department of Reconstruction and Supply to the Canadian Maritime Commission.

Most of the vessels constructed during the war years for operation by the Park Steamship Company have since been sold. Private Canadian operators purchased them under agreement that they would not be transferred out of Canadian registry except by permission of the Crown; a Government announcement, dated May 13, 1948, made public that such transfers might be made providing sanction was first obtained from the Canadian Maritime Commission, which body would deal with each application on its individual merits. The proceeds from the sale of such vessels are to be deposited in escrow and used for replacement by new merchant vessels of modern design and of a type and cost approved by the Commission.

Shipping Subsidies.—The figures given in Table 20 represent the amounts paid in connection with contracts made under statutory authority by the Department of Trade and Commerce and Canadian Maritime Commission for trade services, including the conveyance of mails on certain routes.

In addition to the regular subsidies assistance was given during the year ended Mar. 31, 1947 and 1948, to certain subsidized lines, from the Steamship Subsidies Stabilization Fund, established by Order in Council, July 2, 1942, and amended by Order in Council, July 25, 1946, for the purpose of refunding actual amounts paid out as war bonuses to crews and increased costs of fuel and marine insurance over the basic period Sept. 15 to Oct. 11, 1941. This Fund ceased to operate in 1948. Amounts paid were:—

Section 3.—Water Traffic and Services

Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. To obtain a record of the traffic handled by small independent coasting vessels would be difficult. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors, of cargoes of vessels trading between Canadian and foreign ports and of all cargoes that pass through the canals.

Subsection 1.—Shipping Traffic

A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Shipping statistics are compiled from reports collected by customs officers at customs ports: consequently they are affected by customs regulations and include only data for vessels trading in and out of ports at which such officers are employed.

For years prior to and including the year ended Mar. 31, 1937, the statistics were summarized by the customs officer at each port and compiled by the Department of National Revenue; for subsequent years, compilations were made by the Dominion Bureau of Statistics. Effective Apr. 1, 1940, each vessel departing from port makes a statistical report which is forwarded to the Bureau and from these reports all compilations of shipping statistics are made.

Cargoes are now required to be reported in tons of 2,000 lb. or in tons of 40 cu. ft. Although previous reports did not define the ton, it is quite probable that for many cargoes the long ton of 2,240 lb. was used. Reports are not made now for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

¹ Sea-going and inland international.

Includes other small ports not shown separately.

Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded so that cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but cargoes unloaded and loaded at the respective ports.

Subsection 2.—Canal Traffic

The canals of Canada are open to the vessels and traffic of all nations upon equal terms and thus United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 24 and 26. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

24.—Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons, 1936-47

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see the 1902 Year Book, p. 398; for figures for 1900-10, the 1933 edition, p. 697; and for 1911-35, p. 703 of the 1938 edition.

¹ Figures for the United States include a small percentage to or from ports of other foreign countries.

The figures in Tables 24 and 26 include duplications where the same freight passes through two or more canals, but in Table 27 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie, which amounted to 3,242,872 tons in 1946 and 3,425,347 tons in 1947, have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transhipping port.

¹ Through both Canadian and United States locks at Sault Ste. Marie.

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available, and in 1940 was almost three

times as heavy. It has varied from a low of 20,484,000 tons in 1932, which was less than the Panama traffic, to a high of 120,200,814 tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this has fluctuated from 4,901,000 tons in 1892, an average of 50,000,000 tons in the 1920's, a low of 3,607,000 tons in 1932 and to a peak of 94,326,578 tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore increasing from 15,405,415 tons during the 1946 season to 15,529,045 tons in 1947.

The Panama Canal.—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the Continent. During the First World War the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. During the war years 1940-45, the volume of Canadian traffic through the Canal was greatly reduced.

Subsection 3.—Harbour Traffic

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement in vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and without the staff necessary to obtain a detailed record of freight handled. The National Harbours Board reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 30. The figures include freight carried by coastwise and inland international, as well as by sea-going shipping; they include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are excluded.

PART V.—CIVIL AIR TRANSPORTATION*

NOTE.—For military air transportation see Chapter XXVIII.—Defence of Canada.

Section 1.—History and Administration

Subsection 1.—Historical Developments

The flight of McCurdy's (now The Hon. J. A. D. McCurdy, Lieutenant-Governor of Nova Scotia) *Silver Dart* at Baddeck, N.S., on Feb. 23, 1909, was the first aeroplane flight by a British subject in the British Empire and since that time aviation has played an increasingly important part in the economic and sociological life of Canada. Canada, as one of the leading countries in the world of civil aviation,

* Descriptive and administrative information has been prepared from material supplied under the direction of A. D. McLean, O.B.E., Controller of Civil Aviation, Department of Transport, and W. S. Thompson, C.B.E., Director of Public Relations, Canadian National Railways, Department of Transport: statistics have been compiled by G. S. Wrong, Director, Transportation Division, Dominion Bureau of Statistics.

owes aviation development to a number of factors—the vast expanse of the country, the many rivers and lakes which provided natural landing places for aircraft in summer and winter, and the relentless efforts of those Canadians who had confidence in the future of aviation. Among the latter were the thousands of young Canadians who experienced aerial fighting under war conditions.

Bush flying, a type of operation with distinctly Canadian characteristics, flourished between the two wars, but it was not until Nov. 25, 1927, that the first all-Canadian inter-city air-mail delivery was made in Canada from Ottawa to London, Ont. The inauguration of inter-city air service launched a new phase in Canadian aviation and opened the way for the development of the trans-Canada airways system. Simultaneously, the flying clubs movement was given impetus by Government money grants and gifts of aircraft, in order to provide training grounds for the personnel required by Canada's civil aviation industry.

The density of Canada's population was not sufficient to encourage the investment of private capital in a much-needed trans-Canada air service, and, accordingly, the responsibility for the development of a transcontinental air service was assumed by the Federal Government when the Trans-Canada Air Lines came into being by Act of Parliament, in 1937. Day and night scheduled operations of Trans-Canada Air Lines required, in many cases, the extensive development of airports in order to bring them up to high operational standards. The construction of aerodromes and runways, the installation of radio ranges at intervals of approximately every 100 miles, the installation of lights, the laying of land-lines, the erection of terminal facilities and the rapid expansion of meteorological facilities was a tremendous task as all these developments proceeded simultaneously and, by the end of 1938, scheduled flights carrying mail and express were operating between Montreal, Que., and Vancouver, B.C. On Apr. 1, 1939, scheduled passenger service was inaugurated between these two cities thus marking a new era in Canadian aviation. The growth of Trans-Canada Air Lines since its inception has been rapid, and this Government-owned service ranks now among the finest. Its development gave much impetus to the development of the trans-Canada airways system by the Department of Transport, which to-day is one of the most complete and integrated airways networks in the world.

The trans-Canada airway made possible not only a safe trans-Canada scheduled air service but, during the Second World War, the ferrying of aircraft to the training stations became a matter of hours flying instead of weeks of transportation by rail and sea, and reassembling at their destinations. The network of the Canadian airways, apart from reliable commercial service, stands as a major factor in the defence of Canada, capable of being geared to handle many hundreds of aircraft.

At the termination of the Second World War, many service-trained Canadian airmen turned to commercial flying and were absorbed by the larger operating companies, many others turned to barnstorming, charter flying, crop dusting and aerial photography, and flying services of all kinds sprang up across the country.

With war-time travel restrictions removed, domestic and international scheduled traffic increased as equipment, frequencies of schedules and many new routes became available.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics

Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air-traffic control, accident investigation and the safe operation of aircraft. This part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the issue of licences to operate commercial air services, and the subsequent economic regulation of commercial air services in accordance with the dictates of the public interest. Part III of the Act deals with matters of internal Government administration in connection with the Act.

With the cessation of hostilities, the Air Services Branch (Civil Aviation, Meteorological and Radio Services) found it necessary to make certain changes in its organization in order to expedite the demands made upon it by civil flying activities. In making the necessary changes in organization it was important to anticipate the development of civil flying, and, as a result of surveys and careful consideration given to the problem, a District Controller of Air Services was appointed in the spring of 1948, for each of six districts in Canada, with headquarters at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, and Moncton. The District Controller has jurisdiction in his district over civil aviation, meteorology, and aviation radio, and is charged with the responsibility of co-ordinating these services to the most efficient service possible in the public interest.

Since the autumn of 1936, when the administration of civil aviation was transferred from the Department of National Defence to the then new Department of Transport, civil aviation has, in turn, been under the jurisdiction of the Minister of Transport, the Minister of Munitions and Supply and the Minister of Reconstruction and Supply. On May 4, 1948, an Order in Council was passed and revested in the Minister of Transport jurisdiction over civil aviation, meteorological and radio services. However, under the provisions of the same Order in Council the administration of the Trans-Canada Air Lines Act, 1937, was to remain under the jurisdiction of the Minister of Reconstruction and Supply.

Trans-Canada Airway.—An article describing this Airway appears at pp. 703-705 of the 1940 Year Book.

Pre-War Civil Aviation and the Defence Program.—An article describing the developments of importance in civil aviation prior to the outbreak of war in 1939, and also the contribution that civil aviation made to the air defence program, is given at pp. 608-612 of the 1941 Year Book. An article describing the development and progress of the British Commonwealth Air Training Plan is given at pp. 1090-1099 of the 1946 Year Book.

Administration.—The 1942 Year Book, at pp. 638-639, outlines the administrative arrangements for the control of civil aviation. Present control under the Air Transport Board is given at pp. 682-683.

Subsection 2.—Recent Developments

Disposal of Airports.—Most of the airports and aerodromes built for or adapted to war use by the British Commonwealth Air Training Plan have been acquired by the Department of Transport since the cessation of hostilities. Post-war civilian use was envisioned for many of these aerodromes when they were

built; those declared surplus by the Royal Canadian Air Force have been transferred, through the medium of the Crown Assets Allocation Committee, to the Department of Transport and have, in most cases, been retained for civilian use. Most airports leased from municipalities are being returned to them; many of the newly constructed fields also have been leased to interested municipalities or other responsible bodies.

Many of the R.C.A.F. buildings on the airports taken over have been retained for departmental or municipal use or have been made available at nominal yearly charges to reorganized local flying clubs. Buildings not required for these purposes or as storage warehouses for the War Assets Corporation have been turned over to the Crown Assets Allocation Committee to alleviate housing and other building shortages.

New Developments.—Scheduled operations began on the Great Lakes air route in the summer of 1947. This route saves approximately 125 miles on the trip between Toronto and Winnipeg and by virtue of the many weather reporting stations on both sides of the Lakes makes possible a greater degree of accuracy in the up-to-the-minute weather forecasting which is so necessary for efficient airline operations. The route across northern Ontario now serves as an alternative to the Great Lakes air route.

In connection with the Great Lakes air route, airports and radio ranges were constructed at Wiarton, Ont., and Gore Bay, on Manitoulin Island. Arrangements were made with the United States authorities for the use of Kinross airport at Sault Ste. Marie, Michigan, U.S.A., and negotiations were made for the construction of 100-mile intermediate airports and radio ranges on the south shore of Lake Superior at Grand Marais, and Houghton, Michigan, U.S.A. The Grand Marais and Houghton airports and radio ranges were constructed by the State of Michigan with funds supplied by Canada, and on sites provided by the State or local municipalities. From Houghton the route swings northwest to Fort William-Port Arthur, Ont., thus putting the Lakehead cities on the new Trans-Canada Airway. From the Lakehead the new route goes to Graham, Ont., where a radio range was installed, and thence to Kenora, Ont., where it joins the original Trans-Canada Airway.

The Great Lakes route along the south shore of Lake Superior was planned in co-operation with the United States and the State of Michigan authorities and was chosen because the cold and hilly north shore in Canada prohibited the construction of suitable intermediate airports, and a direct flight from Sault Ste. Marie, Ont., to the Lakehead entailed a trip of more than 250 miles over water.

Many wartime developments, particularly in the field of radio aids to flying, have now been adopted for use in civil aviation, and the effect of these developments has been to increase safety factors and improve the consistency of scheduled flights on transatlantic as well as domestic routes. Impetus to the development of the Instrument Landing System was provided by the Second World War, and many of these installations are now in operation in the United States. Some Instrument Landing System installations have been made in Canada, and the present program calls for one or more of these installations at each major Canadian airport.

Numerous devices have had as their objective, landings in dense fog, but none of these devices has, as yet, been found to be completely adaptable to civil flying. However, safe landings have been made in conditions of very low forward visibility. Research is being carried forward with "blind" landings as the goal and considerable progress has been made in this direction.

Royal Canadian Flying Clubs.—In the spring of 1948 there were 42 member clubs of the Royal Canadian Flying Clubs Association and, at that time, the clubs were making a considerably better showing than for the corresponding period in the previous year, due possibly to weather conditions.

At the end of 1947, the clubs owned 246 aircraft of a wide variety ranging from small "Cubs" to the twin-engine Cessna T-50's. Of this number 203 were in active use. The remainder awaiting a certificate of airworthiness, were reduced to spare parts, or had become obsolete. The clubs marked up a total of 41,000 flying hours and membership totalled 5,436. Of this number 1,738 members were under active flying training.

Ex-R.C.A.F. personnel have shown considerable interest in the club movement and some are acting on boards of directors; however, only a small percentage of ex-R.C.A.F. members are actually flying.

Many members of the clubs fly for recreation only, but the clubs have facilities for commercial-flying training and many young members look forward to a career in aviation.

Scheduled Air Transport Services over Canadian Territory*

Trans-Canada Air Lines.—Air traffic over the Trans-Canada Air Lines was heavier in 1947 than in any previous year and service extensions made possible an increase of 34 p.c. in carrying capacity. While the transcontinental route flown by T.C.A. has been shortened since July 1, 1947, by operation of the Great Lakes air route, over 1,380,000 more revenue miles were flown in 1947 than in 1946.

Flight equipment at the close of 1947 included 30 Douglas DC-3 and 11 Lockheed Lodestar aircraft. Introduction of pressurized North Stars was delayed by production problems, but three newly delivered aircraft were being used for pilot training at the close of the year and were being prepared for domestic operations.

Since July 1, 1947, all transcontinental flights have been scheduled over the shorter Great Lakes air route, reducing the flight time between Toronto, Ont., and Winnipeg, Man., and providing Sault Ste. Marie and the Lakehead cities with their first main line air service. A daily scheduled service between Winnipeg, Man., Saskatoon, Sask., and Edmonton, Alta., now connects with the transcontinental service. Northern Ontario is served by a local operation between Toronto, North Bay, Porquis and Kapuskasing. Medicine Hat and Swift Current, Sask., have been included in the transcontinental schedule. A new international operation was inaugurated on Apr. 1, 1947, with a service between Halifax and Yarmouth, N.S., Saint John, N.B., and Boston, U.S.A.

T.C.A.'s route miles increased by 1,248 to a total of 7,759 during 1947, and six more cities were included as points of call.

* See map at the front of this edition.

The rapid development of the system is shown by the large increase in the number of revenue passengers carried which rose from 21,569 in 1939 to 427,967 in 1947 while the ton miles of mail transported advanced from 306,252 to 1,275,909 ton miles in the same comparison. Revenue freight carried, which had been 67,729 lb. in 1939, reached 2,041,315 lb. in 1947.

Of the 846,722 revenue passengers carried by all civil aircraft in Canada during 1947, 427,967 or 50.5 p.c. originated on T.C.A. aircraft, while of the total revenue passenger mileage of 237,986,178 in 1947, the T.C.A. logged 179,808,562 miles or 75.6 p.c. Similarly 48.3 p.c. of mail poundage and 6.5 p.c. of total revenue freight was carried by T.C.A. Table 1 gives a summary of Trans-Canada Air Lines traffic and Table 2 shows the operating revenues and expenses.

¹ Express and excess baggage. charges excluded each year except in 1946 and 1947.

² Includes other revenue.

³ Interest and exchange

⁴ Includes interest on capital invested.

Canadian Pacific Air Lines.—New air routes developed by Canadian Pacific Air Lines in 1947 included scheduled services between the following points:—

- (1) Vancouver and Prince Rupert, B.C.
- (2) Vancouver, B.C. and Calgary, Alta., via the Okanagan Valley.
- (3) Winnipeg and Flin Flon, Man.
- (4) Seven Islands and Knob Lake, Que.

In order to meet the requirements of the new services developed, nine twin-engined aircraft were acquired and 26 of the smaller and older type planes were disposed of.

As a result of a survey of Canada's air transport requirements, conducted by the Air Transport Board, Canadian Pacific Air Services relinquished, during 1947, most of the non-schedule or charter licences held by them.

Independent Air Lines.—In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are seven other domestic air lines licensed to operate scheduled services in Canada. These are:—

- (1) Maritime Central Airways, Charlottetown, P.E.I.
- (2) Northern Airways Limited, Carcross, Yukon.
- (3) Leavens Brothers Air Services Limited, Toronto, Ont.
- (4) M and C Aviation Company Limited, Prince Albert, Sask.
- (5) Central Northern Airways Limited, Winnipeg, Man.
- (6) Queen Charlotte Airlines Limited, Vancouver, B.C.
- (7) Quebec Airways Limited, Montreal, Que.

Most of the independent air lines are operating non-scheduled services which, with few exceptions, are charter services from designated bases. It is in this field that the greatest development has taken place in recent years. These non-scheduled air services not only provide effective means of access to sections of Canada that are inaccessible by other means of transportation, but also act as feeders to the scheduled air lines.

It is in the charter-service field of commercial aviation that ex-service men have shown the greatest interest, inasmuch as they can commence operations in a modest way and the capital required is not exorbitant.

As at Mar. 31, 1948, the following operating certificates were in effect:—

<u>Certificates</u>	<u>No.</u>
Scheduled domestic.....	32
Scheduled foreign.....	11
Non-scheduled.....	208
Flying training.....	89
TOTAL.....	340

Commonwealth and Foreign Scheduled Services.—Operating certificates issued to Commonwealth and foreign scheduled services flying into Canada number nine and consist of the following:—

- (1) Pan-American Airways, Inc., operating between Seattle, Wash., and Fairbanks, Alaska, with refuelling stop at Port Hardy, B.C., and points of call at Juneau, Alaska, and White Horse, Yukon.
- (2) United Air Lines, Inc., operating between Vancouver, B.C., and Bellingham, Wash.
- (3) American Airlines Inc., operating between Toronto, Ont., and Buffalo, N.Y., and also the Canadian portion of the route between Buffalo, N.Y., and Windsor, Ont., and Detroit, Mich. (Two certificates.)
- (4) Colonial Airlines, Inc., operating between Montreal, Que., and Burlington, Vt.; between Ottawa, Ont., and Burlington via Montreal; between Montreal and Syracuse, N.Y.; and between Ottawa and Syracuse, N.Y. (Two certificates.)
- (5) British Overseas Airways Corporation with Canadian Terminal at Montreal Airport (Dorval).
- (6) Northeast Airlines Inc., between Boston, Mass., and Montreal, Que.
- (7) Northwest Airlines Inc., between Fargo, N.D., and Winnipeg, Man.
- (8) British Commonwealth Pacific Airlines, between Vancouver, B.C., and Sydney, N.S.W., Australia; and between Vancouver, B.C., and Auckland, New Zealand via Fiji Islands, Canton Island, Honolulu, and San Francisco.
- (9) Western Air Lines Inc., between Lethbridge, Alta., and Great Falls, Montana.

Trans-Atlantic Air Service

The spur given to the development of a transatlantic flying service by trade rivalry and national prestige in pre-war days was mild in effect compared to the overpowering demand of war emergency. Under the 1935 Air Agreement, the United Kingdom, was proceeding with what, at that time appeared to be a vigorous policy of flying-boat construction to link Europe and America by transatlantic air service. Canada, under that Agreement, had assumed responsibility for meteorological services in Newfoundland. It is only now, in the light of the accomplished fact, that it is realized how much essential material was missing then for the successful operation of such a service. Weather reports were scant and inadequate for present day needs; aids to air navigation were almost non-existent; communication facilities were sketchy in the extreme; added to all this, the flying boats could, so far as the northern routes were concerned, operate only during the summer months.

The wartime necessity for the speedy delivery of aircraft in Europe introduced in the matter of a few months, changes which in the normal course of events would probably have taken as many years. A large airport was constructed at Goose Bay, Labrador. The Gander Airport in Newfoundland was greatly improved. Long-distance aids to navigation were installed wherever possible and were inter-linked by radio-communication facilities with each other and with centres on the mainland on both sides of the Atlantic. Weather stations were established not only at Continental points but in Iceland and Greenland; and a fleet of weather ships cruised continuously in more or less fixed areas in the Atlantic to give accurate weather data at frequent intervals.

While these services were still in process of development it became apparent that the maintenance of morale of the Canadian troops in Britain could be greatly improved if a rapid and reliable system of mail delivery could be established. The British Government placed a converted Lancaster bomber at the disposal of the Canadian Department of Transport, which in turn, turned it over to Trans-Canada Air Lines for the operation of the Canadian Government Trans-Atlantic Air Service. Six similar aircraft were added to this Service in the course of the next few months as they became available from the assembly line at Malton, Ont.

The first flight of the Canadian Government Trans-Atlantic Air Service between Canada and the United Kingdom took place on July 22, 1943. From then until Mar. 31, 1947, this Service had carried 8,370 passengers, 215,000 lb. of goods and 2,403,500 lb. of mail between Canada and Great Britain.

Changed conditions at the end of the Second World War made it necessary to drop the 1935 Agreement, whereby, the former Trans-Atlantic Air Service was to have been operated by the United Kingdom with assistance, by way of money contributions, from Ireland and Canada. The vast contribution that Canada made towards aerial warfare in the Second World War left her with a large and vigorous transatlantic commercial air service. This introduced a factor into Empire relations which made it unnecessary to continue the 1935 Agreement as it no longer accurately reflected the position of Canada as an operator of world air routes.

Trans-Canada Air Lines (Atlantic) Limited.—On May 1, 1947, Trans-Canada Air Lines (Atlantic) Limited, assumed responsibility for the operation previously provided by the Canadian Government Trans-Atlantic Air Service.

Since that time, the operation has had full commercial status, and up to Dec. 31, 1947, 15,815 revenue passengers crossed the Atlantic and of these 14,393 travelled on scheduled flights. The remaining 1,422 passengers were largely immigrants from the United Kingdom carried under a charter arrangement with the Province of Ontario. These figures do not include passengers carried by other companies under sub-contract with T.C.A. (Atlantic). A total of 251,562 mail ton miles were logged and 531,008 freight ton miles including air express, cargo and excess baggage. Operating revenues on the Atlantic Service were \$5,483,298 against operating expenses of \$5,341,898 and the surplus after interest payments was \$136,303. From 1943, Trans-Canada had operated a wartime transatlantic service between Montreal and Great Britain for the Canadian Government. The Company and its personnel thus acquired considerable experience in transatlantic flights.

The experience gathered during the war years has been of immense value to T.C.A. (Atlantic) not only in the training of air crews in flying the route but also for Company personnel who have taken an active part in so many phases of transatlantic operation. The radio-communications system for T.C.A. (Atlantic) operation, with headquarters at Moncton, N.B., is operated by Trans-Canada Air Lines, as agent for the Department of Transport. Aircraft maintenance crews, during the War, serviced not only their own aircraft but those of the British Overseas Airways Corporation, thereby establishing a technical background for the problems of long-distance operation of aircraft.

The Department of Transport is deeply interested in this Service. The closely integrated Canadian Meteorological Service now has stations at both Goose Bay, Labrador, and Gander, Newfoundland, as well as at Montreal, Que., which are largely devoted to transatlantic operations. The radio range system extends from Montreal, Que., through intermediate points to both Goose Bay and Gander. Canada contributes the cost of one ship as part of an ocean weather station, stationed on the North Atlantic route, at an estimated annual cost of \$350,000.

The collapse of the vast system set up to meet war requirements was avoided by the quick action of the Provisional International Civil Aviation Organization (PICAO) in calling a meeting of the interested countries at Dublin, Ireland, in March, 1946, at which time provision was made for the retention of all the services essential to successful operation. These services are provided by the nations concerned on an agreed and equitable basis, Canada bearing her share of the cost. In this connection, search and rescue facilities were provided by the R.C.A.F. to assist aircraft in trouble at the Canadian end of the route. The Search and Rescue Organization includes not only aircraft to search for lost aeroplanes, but the integration of control and communications systems to enable ships on the Atlantic to render assistance. It keeps all concerned fully informed almost constantly of the position and general well-being of every aircraft in the area.

In the summer of 1948, T.C.A. (Atlantic) was flying seven scheduled round trips per week between Canada and Great Britain. However, due to the heavy traffic, most of these scheduled trips were operated in two sections for the summer months.

The Northern Route to Great Britain either by way of Goose Bay, Labrador, or Gander, Newfoundland, is followed during the summer months. Treaty agreement with Newfoundland requires that all transatlantic services, with the exception of T.C.A. (Atlantic), shall use Gander, weather permitting. T.C.A. (Atlantic)

is the only transatlantic operator that is permitted to use Goose Bay as a regular point of call, other operators being permitted to use it only as a bad weather alternate.

On May 1, 1948, the Bermuda service was inaugurated by T.C.A. with two round trips per week, one flight originating in Montreal, Que., and one in Toronto, Ont.

By treaty agreement with Portugal, T.C.A. has the right to land in the Azores should weather conditions make the operation of the Northern Route undesirable.

Experience during the winter of 1946-47 indicated the desirability of establishing a refuelling base in the eastern Maritimes for the benefit of the numerous transatlantic operators. When the Southern Route, by way of the Azores, is used, the safety of the operation is considerably enhanced if an alternate to Gander is available at a convenient point on the mainland. During the winter of 1947-48, several operators obtained temporary authority to use Sydney, N.S., since the airport at that point is sufficiently developed to accommodate the types of aircraft now used in transatlantic operations. Most transatlantic operators favour Sydney, N.S., and further development at this airport will be carried out with a view to making it a regular refuelling base for transatlantic operations.

Trans-Canada Air Lines (Atlantic), Limited, employs North Star aircraft exclusively on the transatlantic and Bermuda runs. On May 14, 1948, they made their appearance on the Toronto-New York international run and on June 1, 1948, in domestic service as well. The North Star is a Canadian development of the original Douglas DC-4 and uses British Rolls-Royce Merlin engines. The performance of this aircraft is such that it is considered a triumph of Canadian aeronautical engineering.

Section 2.—Airports and Aircraft

Subsection 1.—Summary Statistics of Civil Aviation

From commercial operators of aircraft, aeroplane clubs, etc., the Bureau of Statistics collects and compiles civil aviation statistics, with the exception of data on licences and accidents, which are reported by the Civil Aviation Division of the Department of Transport.

Commercial companies are in two classes, those engaged principally in flying between Canada and the United States and those engaged exclusively or almost exclusively in flying between Canadian stations, see Table 8, p. 756. Regular flying on the Montreal to Vancouver portion of the Trans-Canada Airway began toward the end of 1938. The statistics for 1939 were the first to include extensive operations of the Trans-Canada Air Lines. The companies operating in the north country carry passengers, freight and supplies into and out of the mines and account for the large volume of freight carried by air in Canada. Because of this feature of civil aviation in Canada, it is difficult to make comparisons with other countries where the traffic is principally inter-urban passenger traffic between well-established airports.

3.—Summary Statistics of Civil Aviation, 1941-46

NOTE.—Figures for 1921-23 will be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition; for 1930-34 at p. 698 of the 1936 edition, for 1935-39 at p. 640 of the 1942 edition and for 1940 at p. 720 of the 1947 edition.

Subsection 2.—Ground Facilities

Early ground facilities for civil aviation in Canada consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres, and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. A large air terminal was built at St. Hubert, Que., seven miles east of Montreal, with immigration, customs and postal facilities available. These earlier airports formed the nucleus which, with many additions and improvements, became the chain of aerodromes constituting the Trans-Canada airways operated by the Department of Transport. The development of this airway and the use and expansion of the ground facilities for military purposes during the Second World War affected the status and facilities of many former municipal airports.

Subsection 3.—Aircraft

The construction in Canada of aircraft and equipment is essential to the development of flying. Before the War several manufacturers were producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States formed branches in Canada for the

assembly and servicing of their products. There were also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions. Plants equipped to manufacture civil aircraft and parts were changed over during the War to the production of military types and the industry expanded by many additional plants and firms. The principal statistics of the aircraft industry are shown for the latest available year in the Manufactures Chapter (Table 9, p. 554).

Section 3.—Finance and Employees

Subsection 1.—Federal and Other Expenditures and Revenues

The status of civil aviation in Canada has changed considerably in recent years as regards both civil and military requirements. Until the institution of the Trans-Canada Air Lines, the development of civil aviation was limited to the provision of private, commercial and administrative services for the more remote sections of Canada, chiefly in the northern mining, forestry and trapping regions. Recently, however, the Federal Government has improved existing airports and constructed others for civil and for military purposes. In addition to direct expenditures, the Department of Transport has given assistance to municipalities for the construction and development of airports amounting to \$3,707,311.

5.—Investment, Operation and Maintenance Expenditures and Revenues of the Department of Transport in Connection with Civil Aviation, Years Ended Mar. 31, 1945-47.

NOTE.—Compiled from Department of Transport records. The Departmental Investment Section has been revised from previous years to include Canadian Government Transatlantic Air Service; the Operation and Maintenance Expenditures Section has been revised to include expenditures from war appropriations; and the Revenues Section has been revised to include revenue relating to War Appropriations under the appropriate classification of Revenue instead of showing the total in one amount as heretofore.

No statistics are available regarding expenditures on flying operations by the Federal and Provincial Governments or by private individuals.

The capital expenditures made by commercial air carriers for property as reported for the end of 1946 are shown in Table 6.

¹Exclusive of 115 employees paid \$295,044—Canadian domiciled employees of international carriers.

Section 4.—Aerial Traffic

Table 3, pp. 751-752, shows large increases in passenger traffic during the years from 1941 to 1946. The amount of freight carried by aircraft grew rapidly, increasing from 2,372,467 lb. in 1931 to a pre-war record of 24,317,610 lb. in 1937; it decreased considerably during the war years, amounting to 14,462,400 lb. in 1945, due mainly to the decline in the gold-mining industry and the restrictions in the use of aircraft for trapping and other operations. However, recovery was rapid in 1946 and a new record of 25,226,986 lbs. was established. In the years before the War, a large part of the air freight was mine machinery and supplies to gold-mining companies. Many of these mines, located in the northern parts of Quebec, Ontario and the Western Provinces and in the Northwest Territories, were accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation was the cheapest and most effective method of transportation. Further information regarding air-mail services appears in Part VIII of this Chapter, p. 779.

Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "International" and "Canadian" but duplications are excluded in the totals.

8.—Operations of Civil Aircraft in Canada, 1946

NOTE.—The basis of presentation of these statistics differs from that of previous years.

PART VI.—WIRE COMMUNICATIONS*

Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

Federal Government Telegraph and Telephone Service.†—The Government Telegraph and Telephone Branch which previously provided this service under the Department of Public Works is continuing its functions under the Department of Transport. This transfer was made in order to consolidate the principal Government communication services under one Department. Its general object

* Revised by G. S. Wrong, Director, Transportation Division, Dominion Bureau of Statistics. This Division issues annual reports dealing with telegraph and telephone statistics.

† Revised by G. C. W. Browne, Director of Radio, Radio Division, Department of Transport.

is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. The responsibility for the control of installations of Government telephones in Ottawa now belongs to the Department of Finance.

The Government Telegraph and Telephone Service provides telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and a number of small islands in the Gulf of St. Lawrence; cable connections with Pelee and Manitoulin Islands in Ontario as well as telephone lines on the latter; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabaska and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island and adjacent islands; service to fishing, lumber and mining centres in the interior; an overland telegraph and telephone line serving communities from Ashcroft, B.C., to Dawson in the Yukon.

Telegraph Systems.—The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical difficulties.

1.—Summary Statistics of All Canadian Telegraphs, 1936-46

NOTE.—Figures for the years 1920-30 will be found at p. 722 of the 1938 Year Book and for 1931-35 at p. 637 of the 1943-44 edition.

Section 2.—Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

Subsection 1.—Systems and Equipment

Telephone Systems.—The 3,114 telephone systems existing in 1946 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Public Works and the National Parks of Canada, Department of Mines and Resources. They also included 23 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,354 co-operative telephone companies no fewer than 1,106 were in Saskatchewan alone, 788 in Alberta and 214 in Nova Scotia. The largest among the 516 stock companies operating telephone systems in 1946 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 60 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 58 p.c. of the total for Canada.

Telephone Equipment.—During the years 1935-46 there has been an increase of 817,303 in the number of telephones in use, representing an advance of nearly 49 p.c. in telephones per 100 population.

Of the 2,026,118 telephones in Canada in 1946, 1,122,788 or 55 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces as equipment becomes available.

3.—Mileages of Pole Line and Wire, and Telephones in Use, 1936-46

NOTE.—Figures for the years 1911-30 will be found at p. 724 of the 1938 Year Book and for 1931-35 at p. 639 of the 1943-44 edition.

¹ Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

Subsection 2.—Telephone Finances

Important trends for the telephone industry in Canada are indicated in Tables 5 and 6. There were setbacks in revenues, operating expenses, salaries and wages, etc., during the depression years, but these were not so marked as in most other branches of industry.

5.—Financial Statistics of Telephones, 1936-46

NOTE.—Figures for the years 1911-30 will be found at p. 725 of the 1938 Year Book and for 1931-35 at p. 640 of the 1943-44 edition.

³ Excludes employees and wages for rural systems.

Subsection 3.—Telephone Calls

Table 7 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and, after adjustment for incompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls, in practically all cases, were the actual long-distance calls put through or completed.

7.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1936-46

NOTE.—Figures for 1928-35 will be found at p. 718 of the 1939 Year Book

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita ¹	Averages per Telephone		
	No.	No.	No.	No.	Local	Long-Distance	Total

¹ Per capita figures are based on official estimates of population given at p. 139.

PART VII.—RADIO-COMMUNICATIONS*

The Canada Year Book, 1945, at pp. 644-646, gives an outline of the development of administrative control over radio-communication in Canada.

Section 1.—Administration

The administration and regulation of radio-communication in Canada is carried out by the Radio Division of the Department of Transport. To a very large extent the regulation of radio is made necessary by the great distances over which most radio waves are propagated, and the impossibility of confining them within national boundaries. Mobile stations, such as ships and aircraft, may move about in all parts of the world, and may create interference to radio services of other countries. For these reasons the regulation of radio-communication has been the subject of extensive international agreements. The extreme congestion of long-distance communication frequencies, and the uses of radio in connection with the safety of human life, likewise, make necessary both domestic and international regulation to ensure the most efficient utilization of the available frequencies.

The principal international radio agreements, and Canadian radio legislation can be grouped as follows:—

- (1) The International Telecommunication Convention and Regulations annexed thereto. The International obligations arising from this treaty are incorporated into The Radio Act, of 1938, which also contains radio regulations of a purely domestic nature.
- (2) The International Convention for the Safety of Life at Sea, the obligations of which are enforced through the Canada Shipping Act, which also includes additional domestic requirements. These instruments also cover ship construction and other aspects of marine safety, which are administered by other Divisions of the Department of Transport.
- (3) The North American Regional Broadcasting Agreement, and The Canadian Broadcasting Act, 1936.

International and Commonwealth Conferences and Meetings During 1946-47 and 1947-48.—During these years the following conferences and meetings at which Canada was represented were held: (1) The International Conference on Safety of Life at Sea; (2) a Conference on matters pertaining to Commonwealth

* Sections 1 and 2 of this Part have been revised by the Department of Transport.

telecommunications and rates, and for planning continuing collaboration in this field; (3) a conference of financial experts to consider the financial aspects of the common user costs of the Commonwealth Telecommunications System; (4) an International Special Committee on Radio Interference (CISPR) of the International Electrotechnical Commission. These four conferences were held in London, England. (5) International meetings on Radio Aids to Marine Navigation (IMRAMN) at New York City and New London, Conn., in order that representatives from 31 countries might familiarize themselves with achievements in the field of Marine Radio Navigational Aids, including radar and its applications; (6) Meetings of the Technical Divisions of the Provisional International Civil Aviation Organization (PICAO) and the international Civil Aviation Organization (ICAO) in Montreal, Que., and Washington, D.C., at which plans for the standardization of Aeronautical Communications, Radio Aids to Air Navigation, and qualifications of Flight Personnel were formulated; (7) three conferences in Atlantic City, N.J., for the purposes of (a) revising of the International Telecommunication Convention (Madrid 1932), (b) revising the General Radiocommunication Regulations (Revision of Cairo, 1938), (c) regulating the use of high frequencies for broadcasting purposes; (8) meetings of a new international body established by the International Telecommunication Convention, Atlantic City, N.J., 1947, and called the Provisional Frequency Board (PFB) in Geneva, Switzerland, for the purpose of preparing a frequency list containing revised assignments selected on an engineering basis to radio circuits throughout the world. Meetings of the PFB are being continued throughout 1948.

Subsection 1.—Technical Control and Licensing of Broadcasting Stations

Under The Broadcasting Act of 1936, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister, before being dealt with by the Department of Transport. As the licensing authority the Canadian Broadcasting Corporation also controls the linking up of stations to form networks, and in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Radio Division of the Department of Transport in the same way as in the case of other types of radiocommunication stations. The standard broadcast band is crowded with stations which, particularly at night, are capable of interfering with each other over the entire North American region. To utilize the band most effectively, and to reduce interference as much as possible, Cuba, The Dominican Republic, Haiti, the Bahama Islands, Newfoundland, Mexico, the United States, and Canada, made extensive engineering studies of how to accommodate the largest number of stations with the least interference. The resulting plan is embodied in the North American Regional Broadcasting Agreement. Before an additional new standard broadcasting station can be licensed a professional consulting radio engineer recognized by the Department must make a study of the matter, to select the frequency, the amount of power, and commonly a directional antenna system, and, by calculation, establish that interference to existing stations is within the requirements of the NARBA. This engineering brief is checked by the Radio Division and, if necessary, modifications are made. After a new station is completed measurements must be made, and a Proof of Performance submitted to establish that the actual installation is in accord with the approved plan.

Another important measure to reduce interference is to ensure that each station is maintained exactly on the frequency assigned to it: this reduces considerably the amount of heterodyning, which causes interference in the form of a whistling note. The five Frequency Measuring Stations maintained by the Radio Division make frequent measurements of the frequency of broadcasting and other stations, and ensure that all stations maintain their frequency within the narrow limits required.

The classes of radio stations listed in Table 1 are numerous and complicated by virtue of the fact that many perform closely related functions. As shown there were at the end of the fiscal year Mar. 31, 1948, 1,956,826 radio stations operating in Canada; of these, 267 were Department of Transport stations. The summary of licensed services given on pp. 765 to 766 groups together licensed radio stations performing important related services.

1.—Radio Stations in Operation by Class as at Mar. 31, 1948

¹ Station location ("Z") markers are installed at 71 Radio Range Stations. ² One station, Port Harrison, also performs a restricted coast station service during the season of navigation in Hudson Bay, but since its primary function is that of a weather reporting station, it is shown under this heading only.

³ Includes 66 fixed and 1,315 mobile taxi despatching stations.

⁴ Includes 14 repeater stations.

Subsection 2.—Control and Licensing of Marine and Aeronautical Radio

Under the Safety of Life at Sea Convention, and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph equipment, primarily for use in cases of distress. This requirement of course includes certain standards which equipment must meet to fulfil the purposes for which it is fitted, as well as standards of proficiency of operating personnel. Type approval is given for each make and model of equipment which comes up to the required standard and, in addition, the ship station as a whole is inspected before the licence is issued, and periodically thereafter. Likewise, foreign ships are subject

to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Approximately 3,000 ships are inspected annually.

Analogous inspections of aircraft radio stations are carried out and about 350 aircraft radio stations were inspected in 1947.

Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. These requirements are contained in Radio Division Circular C.R. 1, copies of which can be obtained from any Departmental Radio Inspector.

A 'Type Certificate' of airworthiness is granted to manufacturers for each type (model) aircraft radio equipment which has been demonstrated to meet the requirements. These requirements are contained in Circular C.R. 2, "Requirements for Type Certificate of Airworthiness for Aircraft Radio Equipment". Only type-certificated equipment is accepted for use on scheduled airlines and, while other equipment may be acceptable in other aircraft upon inspection at the time of installation, the purchaser of Type Certificated equipment is assured that it will meet all requirements. Each piece of Type Certificated equipment is accompanied by an Inspection Release Certificate, certifying that the equipment is in good order, and conforms to the approved type.

Subsection 3.—Technical Control of Licensing—General

In all branches of radio, basic control is exercised over the following principal matters: the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

The efficient utilization, as well as the allocation of high frequencies requires reasonably accurate information on the transmission properties of the ionosphere, which varies with the season, the sunspot cycle and other factors. This information is obtained from daily measurements of the ionosphere made at some 50 points throughout the world. These data are combined, analyzed, and forecasts produced for the coming months. While aspects of special interest to Canada are treated by the Canadian Radio Wave Propagation Committee, the general frequency forecasts made by the United States Central Radio Propagation Laboratories are available to Canada. They are based on world-wide data, including those obtained from the two Ionosphere Measurement Stations operated by the Radio Division at Clyde River and Baffin Island, and at St. John's, Newfoundland.

Operator standards and related regulations are principally covered by international agreement, and arise partly from the uses of radio in connection with the safety of life, and also in the interests of reducing interference and making the most effective use of the radio spectrum.

In addition, operators of radio equipment are examined for Certificates of Proficiency in Radio in accordance with the General Radiocommunications Regulations (Revision of Cairo, 1938).

The most important services call for operators holding first, second or other prescribed class of Certificate of Proficiency. Qualified operators for instance are particularly essential in the case of ships and aircraft stations in the interests of

safety of life. Operators for services of lesser importance, or not likely to become a source of interference, are required to satisfy the Department of Transport that they are fully qualified to operate and maintain the equipment upon which they are employed.

As of Mar. 31, 1948, the total number of certificates issued was 16,332, not all of which are still valid. In the commercial classes, certificates must be brought up to date from time to time by exchange or by re-examination, and in a number of cases operators have allowed their certificates to become obsolete.

Summary of Principal Licensed Services

Commercial Trans-Oceanic Radiotelegraph and Radiotelephone Service.—The Canadian Marconi Company is licensed to operate a long distance beam radiotelegraph service from its Montreal (Drummondville) Que., station to Great Britain, Australia, Bermuda, and Jamaica, and a radiotelephone service from Montreal to Great Britain.

Canada-Newfoundland Radiotelephone Service.—The Canadian Marconi Company is licensed to operate a public commercial station with the transmitter at Drummondville and receiver at Yamachiche, Que., for the purpose of communicating with a similar station located at St. John's, Newfoundland, thus providing a direct Newfoundland-Canada radiotelephone circuit.

Commercial Point-to-Point Radiotelephone Services.—The North-West Telephone Company operates a radiotelephone service between points in British Columbia, not hitherto served by telephone communications. Such stations, used in conjunction with the ordinary telephone exchange, provide a duplex radiotelephone service to 147 isolated points and certain ships at sea.

The Quebec Telephone and Power Company.—On the south shore of the St. Lawrence, this Company operates a radiotelephone station at Rimouski which ties in with the Bell Telephone Company at that place and with a radiotelephone station at Baie Comeau, Que; telephone service from that area is provided to any part of the Dominion.

Canadian Pacific Air Lines Limited.—This organization operates a public commercial radiotelephone service consisting of public commercial radiotelephone stations located at Sioux Lookout, Pickle Lake, Red Lake and Kenora, Ont., which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations located at isolated points throughout the northwestern part of Ontario.

Provincial Government Services.—Provincial authorities use radio in forestry work and operate stations as follows: Nova Scotia 5; New Brunswick 4; Quebec 61; Ontario 261 (including 23 aircraft stations); Manitoba 41 (including 3 aircraft stations); Saskatchewan 137 (including 12 aircraft stations); Alberta 154; British Columbia 339 (including 14 patrol vessels, 2 Game Commission vessels and 1 Game Commission fixed station). The British Columbia Department of Public Works operates 5 private commercial stations including 1 aircraft station. The Alberta Department of Public Works has 14 stations (including 2 aircraft stations) and the Alberta Department of Railways and Telephones operates 6 stations. The Nova Scotia Department of Highways and Public Works operates 2 stations.

Police Radio Services.—The Royal Canadian Mounted Police operate 17 radio stations at fixed points, 54 mobile stations, 2 portable stations, 5 aircraft stations and 272 commercial receiving stations throughout the Dominion. The British Columbia Provincial Police operate 27 fixed stations, 10 mobile stations, 7 portable stations, 10 commercial receiving stations and 7 ship stations; the Ontario Provincial Police 42 fixed stations and 261 mobile stations; the Quebec Provincial Police 9 fixed stations and 12 mobile stations. All of these are used to provide liaison between the various units of the Force concerned.

Municipal police radio stations have also been licensed for the purpose of providing communication between various Provincial Police Headquarters and police radio-equipped automobiles in 101 municipalities throughout the Dominion.

Communication with Isolated Points.—Radiotelegraphy and radiotelephony are used throughout the Dominion to provide the means for maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

Public Utilities, Power and Other Companies.—Radio is used by these bodies to provide emergency telegraph and telephone communication between their power plants and distribution centres, and 561 licences for such stations were issued during 1948, including 120 receiving stations in patrol cars.

Licences were also issued to mining companies throughout the Dominion to cover the operation of 165 radio stations and 37 aircraft radio stations.

Other companies operating aircraft were licensed for 200 ground radio stations and 682 aircraft radio stations (including 30 receiving stations installed in aircraft).

Section 2.—Operation of Radiocommunications

Subsection 1.—Accounts and Other Operating Statistics

The International Telecommunication Convention and Regulations contain the International Agreements concerning the rendering and settlement of international telecommunication accounts. The records for Canada are kept by the Radio Division.

¹ Includes licences issued free, numbering 6,998 in 1942, 7,465 in 1943, 7,896 in 1944, 8,375 in 1945, 8,435 in 1946, 10,673 in 1947 and 10,676 in 1948. See Table 1 for classification for 1948.

Investigation and Suppression of Inductive Interference.—Under the Broadcasting Act the use of electrical equipment which will produce harmful interference to broadcast reception is not permitted. The Radio Division maintains 42 cars which are equipped for measuring and locating sources of interference to

broadcast reception. In addition to locating the sources of interference, advice is given as to how it can best be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 23 cities throughout Canada.

4.—Investigations of Inductive Interference, Years Ended Mar. 31, 1945-48

Item	1945	1946	1947	1948
	No.	No.	No.	No.
Sources Investigated—				
Electrical distribution systems and power lines.....	1,217	1,645	1,554	1,459
Domestic and commercial electrical apparatus.....	1,808	2,859	4,162	5,035
Defective receivers and radio apparatus.....	507	647	871	1,433
Electro-medical (diathermy) apparatus.....	—	—	—	1,474
Totals.....	3,532	5,151	6,587	9,401

Sources not yet reported cured.....	379	960	1,214	2,725
Sources having no economic cure.....	61	84	140	248

Table 4 shows a considerable increase in the domestic and commercial sources of interferences. This is due largely to the widespread adoption of fluorescent lighting in business establishments and in some private homes. Interference of this kind may be eliminated by the installation of standard suppressors, which have been in short supply for many years but are now available.

Commencing on Jan. 1, 1948, industrial, scientific and medical apparatus is being brought under strict control, according to Regulations for Controlling Radio Interference and the authority of Section 23 of the Canadian Broadcasting Act, 1936. These regulations require that the radiation from such apparatus, which is liable to cause interference to radiocommunications, must be suppressed, either by shielding or by replacing the apparatus with a non-interfering type. The Department conducts type-tests on diathermy and industrial heating apparatus submitted by manufacturers, and those types which fulfil the requirements of the Department, are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

Subsection 2.—Federal Government Marine Radio Stations

Marine.*—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay and Strait, and Sub-Arctic; and Pacific Coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1947-48, Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 829,222 messages or 26,296,768 words.

* Detailed information covering all marine radio aids to navigation is contained in the annual publication "Radio Aids to Marine Navigation". Copies of this publication may be obtained, upon request, from the Department of Transport without charge, also any supplementary "Notices to Mariners" issued in connection therewith during the year.

Radio Coast Stations.—The primary purpose of the coast station organization is to provide radiocommunication facilities whereby any ship within 500 miles of the Canadian coast may establish communication with shore.

On the East Coast and the Hudson Bay and Strait there are 16 stations. There are 7 on the Great Lakes and 7 more on the West Coast. All of these broadcast information to navigators twice daily at advertised hours. Urgent information such as hurricane warnings, etc., is broadcast immediately upon receipt.

The Vancouver Coast Station (VAI) maintains long range radiocommunication with ships of any nationality at sea. Halifax (CFH) and Vancouver (CKN) Coast Stations participate in the British Empire scheme for providing similar radiocommunication services with ships, and are operated jointly by the Department of Transport and the Royal Canadian Navy.

Radio Direction Finding Service.—There are 13 marine radio direction finding stations in operation—7 on the East Coast, 5 on the Hudson Bay and Strait, and 1 on the Pacific Coast. These direction finding stations have an enviable reputation for efficiency and accuracy. During 1947-48, 14,950 bearings were given without charge to ships and aircraft.

Radio-Beacon Service.—Radio-beacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radiobeacon station. There are 45 radiobeacons in operation—23 on the East Coast, 15 on the Great Lakes and 7 on the Pacific Coast.

“Loran” (Long range aid to navigation) is a system of position finding based on the difference in the time of arrival of pulse type radio signals transmitted from a pair of stations. This time difference is measured in a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

There are three standard Loran stations in Canada, at Deming and Baccaro, N.S., and Spring Island, B.C., which operate in conjunction with Port Aux Basques, Nfld., Siasconset, U.S.A. and Point Grenville, U.S.A., respectively.

In clear weather each station, at advertised hours, transmits its characteristic for three periods of one minute separated by silent intervals of 2 minutes. In foggy weather all stations operate continuously, maintaining a uniform time cycle of 3 minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of 2 minutes.

At Flat Point, N.S., Partridge Island, N.B., Red Islet, Que., Caribou Island, Gros Cap Lightship, Hope Island, Main Duck, Southeast Shoal, Cove Island, Michipicoten Harbour, Long Point, Ont., and Point Atkinson, B.C., the radiobeacon signals are synchronized with the emissions of the fog alarms at those points during foggy weather for distance finding.

Ships equipped with direction finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations. During 1947-48, 204 such requests for signals were handled.

East Coast Visual Signal Service.—The chief function of the visual signal stations on the East Coast, located at strategic points, is to report the movements of vessels not equipped with radio. All radio coast stations report ships with

which communication has been established, and this information is supplemented by reports of ships sighted by the visual signal stations which are organized to tie in with the East Coast radio service.

There are 9 visual signal stations on the East Coast located at Aspy Bay, Scatari Island, Point Tupper, Sydney, Halifax, Camperdown, Saint John, Partridge Island, and Point Lepreau. In addition, the Lurcher Lightship reports by radio to the nearest coast station all ships spoken and sighted.

Time Signals.—Time signals are transmitted by Halifax (CFH) daily at 0300 G.M.T. simultaneously on 115 and 5502.5 kc/s and at 1500 G.M.T. simultaneously on 115 and 9040 kc/s; also by Camperdown (VCS) daily, except Sunday at 1400 G.M.T. on 417 kc/s.

The Dominion Observatory of the Department of Mines and Resources, Ottawa, operates a continuous night and day time signal transmission over its Radio Station (CHU) on the frequencies of 3,330, 7,335 and 14,670 kc/s. They are also carried over domestic telegraph circuits to Port Churchill, Manitoba, and transmitted over Station VAP daily at 1500 G.M.T. These signals are of value to survey parties and prospectors in providing facilities for determining their exact geographical positions.

Radar.—The use of radar as a marine aid to navigation continues to gain favour with navigators. In 1947-48 approximately 140 Canadian ships had this aid to navigation aboard and its intelligent use permits a ship to proceed with greater safety during inclement or foggy weather. Several Departmental ships have these radar equipments and one is installed for demonstration and instructional purposes in each of the Departmental quarters at Vancouver, Ottawa, and Halifax. Ship-board installations on Canadian ships, except Government ships, are serviced by private companies.

The Department is co-operating with the National Research Council in the development of a shore-based radar aid to shipping for use at harbour entrances. An experimental installation of this type is now in operation at Camperdown Direction Finding Station at the entrance to Halifax Harbour and it is expected to go into operation on an official basis within a reasonable time.

Medical Advice to Ships at Sea.—Ships at sea may obtain medical advice through any of the Department's coast stations. Messages from ships in this connection are forwarded to the nearest medical officer of the Department of Pensions and National Health and a reply is transmitted to the ship.

Radio Assistance Rendered to Vessels in Emergency.—Government radio stations rendered assistance to 50 ships and aircraft reported in danger or distress during 1947-48.

Marine Casualty Reporting Stations.—Seven marine casualty reporting stations on the Atlantic Coast and 10 on the Pacific Coast are fitted with radio-telephony to assist in promoting the safety of life at sea.

Subsection 3.—Federal Government Aeronautical Radio Stations

Construction and Maintenance Engineers and Technicians are located at six Radio Aviation District offices, at Moncton, N.B.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C.

Radio Aids to Air Navigation.*—These are provided along the routes used by Trans-Canada Air Lines, Canadian Pacific Air Lines, Maritime Central Airways, United States Airlines flying over Canadian territory, and a number of Canadian and United States military aircraft. There are now 90 radio range stations completed and in operation. There are 10 fan markers at Goose Bay, Labrador, and 6 stations providing weather information from isolated localities, and 4 homing beacons.

Radio Ranges.—During the fiscal year 1947-48, 2 new radio ranges were completed, namely, Gore Bay and Wiarton, Ont. The radio range at Coral Harbour, N.W.T., was recommissioned and considerable progress was made towards the completion of a new radio range at Sandspit, B.C., to serve the only landing strip on the Queen Charlotte Islands.

Problems associated with the provision of very high frequency omni-directional ranges continued to receive study, and a development contract was let for the construction of an engineering model of this equipment.

Instrument Landing Equipment.—During 1947-48 much work was done towards equipping Montreal, Que., Toronto, Ont., Winnipeg, Man., Saskatoon, Sask., Lethbridge, Alta., Calgary, Alta., and Vancouver, B.C., with instrument landing equipment. Sites were checked and finally settled and plans prepared for the letting of contracts for the required buildings. A study was made of proposals to increase these installations to 16 airports in future.

Station Location Markers.—Station location markers are now located on 77 radio range sites and serve to indicate to pilots when their aircraft are vertically over the range station.

Conversion to Simultaneous Operation.—Preparations were made in 1944-45 to convert 26 ranges, in addition to those already converted, to simultaneous operation; this would permit voice communication between the ground stations and aircraft without shutting off the course signals. During 1946-47, 10 stations were converted: Armstrong, Kenora, and London, in Ont.; Buchans, Nfld.; Dartmouth, N.S.; Charlottetown, P.E.I.; Megantic, Que.; Saskatoon, Sask.; Whitecourt, Alta.; and Goose Bay, Labrador.

Point to point radiocommunication facilities are established in conjunction with 52 range stations and high frequency air-ground facilities are provided at 17 ranges, in addition to the normal voice facility of the range. The Montreal station also provides transatlantic communications for the intercontinental exchange of meteorological data, and communicates meteorological data to Goose Bay, Labrador, and other points.

During the year 1946-47, frequency modulation stations were taken over from the R.C.A.F. at Sandspit, Massett, and Mount Hayes on the West Coast, and 3 similar stations on the East Coast at Cape Ray, Nfld., Cape North, and New Waterford, N.S. The west coast stations permit teletype communication between Queen Charlotte Islands and the mainland, and the east coast stations permit a similar service and a scheduled inter-phone service between Canada and Newfoundland.

* Detailed information concerning radio aids to air navigation is contained in "Air Navigation Radio Aids" and is published at 2-month intervals. This publication may be obtained from the Radio Division, Department of Transport, Ottawa.

Meteorological Radio Stations.—Five meteorological radio stations are located at Fort MacKenzie, Que., Nitchequon, Que., Dore Lake, Que., Sandgirt Lake, Labrador, and Dease Lake, B.C.

These stations forward to the meteorological office the weather observations taken at the above points.

The meteorological station at Port Harrison, Que., performs similar functions, and also provides a restricted coast station service during the season of navigation in Hudson Bay.

Ionosphere Measurement Stations.—The ionosphere station at Clyde River, Baffin Island, taken over from the Carnegie Institute, Washington, D.C., on Sept. 1, 1945, and the ionosphere station at St. John's, Nfld., taken over from the Royal Canadian Air Force on Mar. 31, 1946, by the Department of Transport, are both part of a world-wide chain of 50 stations, established for the purpose of predicting short-wave communication coverage, also for determining the reliability and deviation of bearings from short-wave direction finders.

Subsection 4.—Other Federal Government Radio Stations

Department of National Defence.—In addition to stations established for military purposes, Militia Services (Royal Canadian Corps of Signals) operates 11 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon on behalf of the Department of Mines and Resources, Bureau of Northwest Territories and Yukon Affairs.

Department of Public Works.—A total of 32 stations, 12 to provide emergency communication between the mainland and certain islands, 18 to provide emergency links in existing landline circuits, and 2 for Departmental communication are operated by the Department of Public Works.

Department of Mines and Resources.—This Department operates under the Surveys and Engineering Branch, 1 fixed station, 9 portable stations, 1 experimental station and 1 commercial receiving station; National Parks Bureau, 9 fixed stations, 16 portable stations and 2 experimental stations; Mines and Geology Branch, 1 fixed station and 1 commercial receiving station; Bureau of Northwest Territories and Yukon Affairs, 2 fixed stations and 28 portable stations. These stations are used to provide communication and time signal service for survey parties and the protection and administration of National Parks.

Department of National Revenue.—This Department operates 2 private commercial stations.

Section 3.—Canadian Broadcasting Corporation

Subsection 1.—Administration of the CBC

The history and development of the Canadian Broadcasting Corporation is given at pp. 737-740 of the 1947 Year Book.

The Canadian Broadcasting Corporation operates under the Canadian Broadcasting Act, 1936, and is headed by a Board of nine Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time Chairman. The Board determines and supervises policy, but day-to-day operations and administration are the responsibility of the General Manager. The Adminis-

trative organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations, and Station Relations.

Under the Canadian Broadcasting Act, the CBC is responsible for regulations controlling the establishment and operation of networks, the character of any and all programs broadcast over its own and privately owned stations, and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of seeing that the regulations are observed rests with the individual station management.

Subsection 2.—Operations of the CBC

Recent Developments.—The Canadian Broadcasting Corporation is constantly in touch with developments in the field of radiocommunications and, so far as these have a bearing on Canadian conditions, their application is considered. This is particularly true in the field of frequency modulation and television.

Frequency Modulation.—This relatively new method of transmission has several advantages over the system of amplitude modulation broadcasting. These include (1) reduction of static and electrical interference; (2) elimination of interference from other stations; (3) improved quality and naturalness of reproduction and (4) reduction of the congestion in the present (AM) broadcast band.

The CBC has two FM stations at Montreal, Que., and one each at Toronto, Ont., Vancouver, B.C., and Ottawa, Ont. Another is planned for Winnipeg, Man. The aim is to get FM programs on the air, and thus encourage the manufacture and sale of FM receiving sets.

The CBC has recommended to the Department of Transport that operators of present AM stations be invited to start FM transmissions of the programs now carried on their AM transmitters. The Corporation holds in principle that an AM station operator obtaining an FM licence should broadcast the same programs over the two transmitters, operating his FM equipment as a second form of transmission rather than a separate station.

Television.—The Board of Governors of the Canadian Broadcasting Corporation has carefully considered questions of television in relation to Canadian needs and conditions, and has stated that it will strive for the maximum provision of Canadian television for Canadians, with the aim of stimulating Canadian national life and not merely of providing a means of broadcasting non-Canadian visual material in this country. The Board has stated that, over a limited period of years, television can be developed by the national System to reach the public in many parts of Canada and can be operated partly on the financial basis of revenues from television receiving set licence fees and partly from commercial income.

In view of the limited number of frequencies likely to be available for television, the Board has stated that it will exercise great care in recommendations regarding applications from individuals or private companies for licences. It will also make recommendations that the necessary channels be reserved for the national System.

Broadcasting Facilities.—Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or location. Two considerations are involved:

(1) non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both long and short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks, serving English-language audiences from Atlantic to Pacific, and the French network, serving French-language listeners in Quebec. The Trans-Canada network is made up of 23 basic stations: 9 CBC-owned and 14 privately owned. The Dominion network consists of 30 basic stations, of which 29 are privately owned. The French network has 3 basic CBC-owned stations, and 10 privately owned stations. As of September, 1948, the CBC has 13 stations of which 7 have 50,000-watt transmitters. The CBC leases some 25,000 miles of wire lines each day in order to carry on network operations in Canada, which lies across five of the world's time zones. In order to present programs at suitable times, and to give expression to varying interests in the five regions, CBC maintains regional offices and production facilities at Halifax, N.S.; Chicoutimi, Quebec city, and Montreal, Que.; Ottawa and Toronto, Ont.; Winnipeg, Man.; and Vancouver, B.C.

5.—Broadcasting Stations of CBC Networks, as at Apr. 1, 1948

(Basic Stations)

CBC International Service (Short wave).—Canada's international shortwave broadcasting facilities (1948) employ ten languages: English, French, Czech, Dutch, German, Danish, Norwegian, Swedish, Spanish and Portuguese, in regular transmissions to the United Kingdom, Europe, the West Indies, Central and South America, and to the South West Pacific. Plans for the year include the inauguration of additional services to Europe and expansion of services to Latin America, Australia and New Zealand.

The CBC international service transmitters are located on reclaimed marshland near Sackville, N.B. Linked by land-line with studios and program headquarters in Montreal, the two 50,000-watt transmitters used by the CBC International Service can operate in any of the international short-wave bands. Frequencies used depend on solar conditions, the geographical area served, the season of the year and the time of day.

The service opened officially on Feb. 25, 1945. During the first three years of operation more than 40,000 letters were received from listeners in all parts of the world, testifying to the strength with which Canadian short-wave programs are received and to the interest in Canada which they either arouse or help to satisfy. Listeners in Europe report constantly that CBC International Service programs are heard more clearly than other broadcasts from the Western Hemisphere.

For two hours each weekday the facilities of the CBC International Service are placed at the disposal of the United Nations Organization Radio Division to relay official reports and commentaries to Europe, the Middle East and to the South West Pacific.

Listeners receive, upon request, an illustrated booklet, published every two months, giving schedules of broadcasts, details of programs and the frequencies on which they are heard, as well as photographs and general information about Canada. Reception reports from listeners are also verified and enquiries on trade conditions, social, scientific, and educational matters are given attention.

The Service provides short-wave listeners abroad with comprehensive day-to-day reports and actuality broadcasts from all major international conferences held in North America since the end of the War in 1945.

Supplementing the regular programs in ten languages, special events broadcasts of all kinds are arranged to give the CBC listeners in other lands a comprehensive picture of the activities in Canada. Visitors from abroad frequently use the CBC short-wave service to report back to their home countries on their impressions of Canada.

Domestic Program Service.—During the fiscal year ended Mar. 31, 1947, 59,705 programs representing 17,843 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, 80.6 p.c. were devoted to non-commercial and public service programs, and the remaining 19.4 p.c. to commercial presentations. The National network, made up of the Trans-Canada, Dominion and French networks, carried 0.1 p.c. of total network programs. Of the total broadcasting hours in 1946-47, 65.3 p.c. was scheduled on the Trans-Canada network; the Dominion network operating in the evenings released 7.6 p.c. and the remaining 27.1 p.c. was released on the French network.

The CBC originated and produced 78.4 p.c. of its network broadcasts. Of the remainder, 2.3 p.c. came from private stations and 19.3 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various

categories of light music made up the greatest number of broadcast hours, followed in order by news, drama, semi-classical music, variety, agriculture programs, talks, educational broadcasts, religious periods, and programs devoted to the interests of women, sports fans, and children. Table 6 shows the proportion of total time devoted to sustaining as compared with commercial programs, and analyses those made up of music as compared with the spoken word.

6.—Classification of CBC Programs, Year Ended Mar. 31, 1947

NOTE.—Dashes in this table indicate that no programs were reported under these particular sub-items.

Subsection 3.—Finances of the CBC

Due to the maintenance of an efficient broadcasting service and the expansion of the physical plant and equipment, working capital has been reduced by \$177,105 during the year. Fixed assets have increased by \$112,220 mainly on account of the new transmitters at Lacombe, Alta., and Hornby, Ont., which are expected to be in operation by 1948-49.

Licence fees increased by \$132,556 and commercial and miscellaneous revenues increased by \$102,926 but expenditures also increased correspondingly due to prevailing conditions resulting in an operating deficit of \$27,216 for the year ended Mar. 31, 1947, before providing allowance for depreciation and obsolescence.

All expenses relating to the International Short-wave Service are directly chargeable to the Government of Canada as provided annually by Parliament. These are not considered chargeable to the Canadian Broadcasting Corporation because the fees collected from broadcasting licences are used only to serve listeners within Canada.

Section 4.—Privately Owned Radio Broadcasting Stations*

Development of Privately Owned Radio Broadcasting Stations.—

Privately owned broadcasting stations began operations in the early 1920's and since 1929 have offered regular broadcasting services to Canadian communities extending from the Atlantic to the Pacific.

These stations now number 113. Many are located in the smaller centres of population while others are in remote districts, some of which depend entirely upon privately owned stations for their radio broadcasting services.

The privately owned stations serve, primarily, the localities in which they are situated, the community served varying with circumstances. Many such stations are located in very small urban centres, where they serve not only the "home base" but a much larger population scattered throughout surrounding rural areas. Others may serve a metropolitan area, and cities or towns adjacent to it, in addition to the rural audiences and smaller centres lying between or beyond the urban areas.

These privately owned stations have a combined capital investment estimated at about \$15,000,000, employ about 3,000 persons and disburse an estimated payroll of \$7,000,000 annually. Revenue of these stations is obtained entirely from commercial advertising.

*Prepared by T. J. Allard, Manager, Radio Bureau, Ottawa.

Thirty-nine privately owned stations are wholly or partly owned by newspapers, the others are owned by citizens or groups of citizens living within the area served by the station.

Administration.—In common with the CBC's own stations, the privately owned stations operate under the Canadian Broadcasting Act; The Radio Act; regulations made by the CBC; and technical specifications laid down by the Department of Transport. Annual statements of "Proof of Performance", showing that public obligations have been fulfilled, together with financial statements must be filed with the Department of Transport. Advance copies of the programs scheduled must also be filed weekly with the CBC, and a program log within seven days following operations. Advertising content of program is limited to 10 p.c. of program time.

Broadcasting Facilities.—The privately owned stations operate on frequencies selected by the licensee's own consultants, and approved upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation, and are valid, unless cancelled or revoked, for a period of three years (increased from one year as of Apr. 1, 1948). Sale or ownership transfer of any station while under licence must be approved by the licensing authorities.

Privately owned radio stations were at first limited to low power operation of 1,000 watts, which was later increased to 5,000 watts. In 1948, two privately owned stations, one in Montreal, Que., the other in Toronto, Ont., were authorized to operate on 50,000 watts. The majority of stations, however, still continue to serve on 1,000-5,000 watts on the "shared" channels, the CBC stations occupying the clear channels allocated to Canada by the North American Regional Broadcasting Agreement and operating, in the main, on 50,000 watts.

The total operating power of the 113 stations is approximately 289,750 watts. About 38 privately owned frequency modulation stations are being constructed, mostly for operation in conjunction with existing amplitude modulation stations.

Network Operations.—Network operation in Canada (the process of having two or more stations, connected to a wire line network, broadcasting the same program at the same time) is, by statute, controlled by the CBC, and is also the channel by which United States commercial network programs are brought into Canada. Some privately owned stations do, however, by agreement, serve as "basic outlets" for CBC network programs. Under this arrangement, the private station carries certain programs (both commercial and non-commercial) specified in the agreement, and must give right of way to programs coming onto the network within specific hours. Other private stations, known as "supplementary" outlets, enter into agreement to carry specific programs only. (See Section 3, pp. 772-776).

PART VIII.—THE POST OFFICE

During 1948, the Canada Post Office continued to develop plans to keep its services attuned to growing requirements, present and future.

The extent of postal business may be judged from the fact that in the fiscal year 1947-48 gross postal revenue had reached the all-time high figure of \$91,600,000 or more than double that of the year 1937-38.

In the same period the Post Office issued money orders payable in Canada to the amount of \$359,633,000 and payable abroad to the value of \$10,599,329.

At the Congress of the Universal Union at Paris, France, in May, 1947, at which Canada was represented, much was done to restore international services disrupted during war years.

In 1947, parcel post rates were reduced to the United Kingdom and to other overseas countries. The Post Office restored parcel post services on an ever-widening range, thus enabling needed relief to be provided to peoples in the devastated areas from friends and relatives in Canada.

Air Mail.—During 1947 and 1948 further developments were made in Canada's Air Mail System, and on July 1, 1948, a milestone was passed in postal history. This was the inauguration, at first on limited scale, of All Up Mail Service for first class letter mail up to and including one ounce in weight, prepaid in Canadian postage, and addressed to destinations in Canada. Under the System this mail was carried over the main Trans-Canada Air Lines network, whenever delivery would thus be expedited.

Extension of air routes during the year 1947 included direct Air Mail Services between Halifax, N.S., and Boston, Mass.; Winnipeg and Flin Flon, Man.; Vancouver and Prince Rupert, B.C.; and to a number of points in southern British Columbia as a result of the institution by Canadian Pacific Airlines of a service between Vancouver and Calgary, via Crow's Nest Pass, B.C. In the summer the inauguration by T.C.A. of its Great Lakes operation enabled the Post Office to give direct Air Mail Service to Sault Ste. Marie and Fort William, Ont. Swift Current, Saskatoon and Medicine Hat, Sask., were also served by the main air-mail network. Beginning June 1, 1948, air-mail was despatched and received twice a day in place of once daily, between Dorval, Que., and Prestwick, Scotland, and London, England.

Institution on June 1, 1948, by T.C.A. of its North Star 'plane service between Montreal, Que., and Vancouver, B.C., on twice daily frequency each way did much to save further time for mailers from east to west.

The following figures show the weight of mail conveyed by air during the calendar years, 1939-1947:—

<i>Calendar Year</i>	<i>T.C.A.</i>	<i>All Air Services</i>
	lb.	lb.
1939.....	392,931	1,994,643
1940.....	634,444	2,739,473
1941.....	1,329,232	3,350,431
1942.....	2,308,812	4,793,491

1946.....	2,325,978	5,589,366
1947.....	2,527,672	5,818,682

During 1948, Letter Carrier Delivery Service was extended to more of our larger centres including:—

Campbellton, N.B.	Fort Frances, Ont.	Portage la Prairie, Man.
Brampton, Ont.	Port Colborne, Ont.	Penticton, B.C.
Dundas, Ont.	Port Hope, Ont.	Port Alberni, B.C.
Fort Erie, Ont.	Wallaceburg, Ont.	Vernon, B.C.

Section 1.—Post Office Statistics

Gross postal revenue of the Post Office Department reached the highest point on record during the year ended Mar. 31, 1948, amounting to \$91,613,618. Mail volumes continued at very high levels, reflecting the great general economic and business security throughout the country.

¹ Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1940 was \$44,208,369; in 1941, \$48,143,410; in 1942, \$55,477,159; in 1943, \$59,175,138; in 1944, \$73,004,399; in 1945, \$79,533,903; in 1946, \$83,763,007; in 1947, \$86,400,951; and in 1948, \$91,613,618.

Postage.—The net revenue receipts shown in Table 3 are received mainly in the form of postage. The gross value of the postage stamps, post cards, etc., sold during each of the latest nine fiscal years was: \$29,530,247 in 1940, \$31,425,593 in 1941, \$35,716,908 in 1942, \$38,959,795 in 1943, \$50,062,214 in 1944, \$53,250,630 in 1945, \$52,135,846 in 1946, \$55,263,063 in 1947, and \$56,303,157 in 1948. Receipts from postage paid in cash were as follows: \$11,792,311 in 1940, \$13,459,526 in 1941, \$15,777,816 in 1942, \$16,057,366 in 1943, \$18,728,050 in 1944, \$20,498,106 in 1945, \$23,252,162 in 1946, \$24,312,374 in 1947 and \$28,959,194 in 1948.

Section 2.—Auxiliary Postal Services

The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of \$3,342,574; the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the chapter on Currency and Banking (Chapter XXIV).

4.—Operations of the Money-Order System, Years Ended Mar. 31, 1938-48

NOTE.—For figures for 1868-1900, see the 1911 Year Book, p. 239; for 1901-31, the 1932 edition, p. 622; and for 1932-37, p. 666 of the 1942 edition.

PART IX.—THE PRESS

The tables of this Part, based on data obtained from *Canadian Advertising* have now been carried back to the latest complete pre-war year, viz., 1938, and are presented on pp. 788-793.

One serious difficulty has been encountered in connection with the compilation of circulation figures. In the case of daily newspapers, reliable circulation figures are relatively easy to obtain since in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation's requirements. In such cases A.B.C. 'net paid' figures have been used.

In regard to weekly newspapers it is difficult to obtain reliable circulation figures from many of the weekly publishers who do not subscribe to the Audit Bureau. In these cases, therefore, total circulation (paid and free) has been taken where such figures are supported by sworn statements or some other reliable record.

In the case of the weekly newspapers, however, the term "Controlled Distribution" is frequently met with in their reports. Exactly what this term means is doubtful. In some cases "Controlled Distribution" is probably legitimately subscribed and paid for, whereas in others the term may vaguely cover free distribution with various degrees of control.

It is considered to be unwise, therefore, to combine all such circulation figures. Yet, since "Controlled Distribution" cannot be ignored, papers so reporting are shown separately in Table 5.

As regards magazine circulation, the total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales) have been used. In the relatively few cases where such figures were not available, minimum publishers' claims or sworn statements have been accepted.

Daily Newspapers.—Three types of daily newspapers are published in Canada, English-language, French-language and foreign-language newspapers. The number of these papers has remained about the same from 1938 to 1947. Tables 1 and 2 show the increasing circulation during this period.

French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the larger of these papers have been established in the Province for over 60 years. Ten of the 11 French-language papers are published in this Province, the other being in the adjoining Province of Ontario. Over 93 p.c. of the total circulation of the English and French dailies is in the urban centres of 20,000 population or over.

Weekly Newspapers.*—The weekly newspapers have a somewhat wider circulation; only 61 p.c. of the stated circulation of weekly English-language newspapers (exclusive of the 'Controlled' circulation given in Table 5), is in cities of 20,000 population or over and about 80 p.c. of the French-language weeklies.

Canada is well served by foreign-language weekly newspapers. In 1947, these newspapers had a stated circulation of 196,930 copies among which Ukrainian papers had a circulation of 65,791 copies, German 36,070, Yiddish 28,262 and Polish 15,566 copies.

Other Publications and Periodicals.—Table 7 gives the number of publications, other than newspapers, published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation while those dealing with home, social and welfare, and agricultural and rural topics, religious, trade, industry and related publications are the most popular types.

* Including a very few semi- and tri-weekly newspapers.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

The different directions that economic development has taken across Canada and the diverse resources of various parts of the country have led to a vast exchange of products. The task of providing goods and services where they are required for consumption or use by the widely scattered population of 12,883,000 (1948 estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of Canada's great volume of foreign trade, high though the Dominion ranks among the countries of the world in this field.

Domestic trade is broad and complicated: it encompasses all values added to commodities traded in, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. However, not all phases of this broad field are covered here; the arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles and cross reference to other chapters is a more convenient way of dealing with certain subjects. The Index will be found useful in this respect.

Section 1.—The Grain Trade

Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An account of the organization and functions of the Board of Grain Commissioners appears at pp. 481-482 of the 1941 Year Book. An article on the operations of the Wheat Board is included in the 1939 Year Book. That material is brought up to date in the 1947 edition.

Subsection 2.—Distribution, Storage and Inspection of Field Crops

The dominant feature of the disposition of Canadian wheat for the past four years has been the heavy export movement of this grain. During each of the crop years 1943-44, 1944-45 and 1945-46, exports of wheat and wheat flour exceeded 340,000,000 bu. In two of these years, 1943-44 and 1945-46, exports actually exceeded production and this, coupled with somewhat heavier than usual domestic use, steadily reduced stocks of wheat so that the carryover at the beginning of 1946-47 was at an extremely low level. The harvesting of a 413,700,000 bu. crop in 1946, when added to carryover stocks at Aug. 1, gave a total wheat supply of 487,300,000 bu. This supply was lower than that of any other year since 1938-39. Both exports and domestic use were reduced in 1946-47 thus reflecting the low level of available supplies. The carryover at the end of the crop year (Aug. 1, 1947) was still at a very low ebb. Of the 242,900,000 bu. of wheat and flour exported in 1946-47, slightly over 160,000,000 bu. went to the United Kingdom. Other major recipients were Belgium with 9,500,000 bu. and the Netherlands with 7,600,000 bu.

Use of wheat in Canada dropped from 163,000,000 bu. in 1945-46 to 157,100,000 bu. in 1946-47. The decline is largely accounted for by reductions in the quantities used by industry and for human food.

1.—Production, Imports, Exports and Domestic Use of Wheat and Wheat Flour, Crop Years Ended July 31, 1942-47

(Millions of Bushels)

Item	1941-42	1942-43	1943-44	1944-45	1945-46	1946-47

Carryover July 31.....	423.8	594.6	356.5	258.1	73.6	87.3

¹ Less than 100,000 bu.

The domestic and export trade in Canada's five principal grain crops are shown in some detail in Table 2. Exports of wheat and oats were substantially lower than in 1945-46, while barley and rye showed sharp increases. Exports of flaxseed were very small. The feeding of live stock and poultry each year accounts for large quantities of grain, over 500,000,000 bu. being used for this purpose in both 1945-46 and 1946-47.

2.—Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1947

¹ Includes wheat flour.

² Less than 100,000 bu.

The 1947-48 Grain-Marketing Policy.—During the crop year 1947-48 the gap between world grain supplies and requirements was very wide. Crops in the normal deficit areas of the world were poor and, despite large shipments from the major exporting nations, the grain supply situation remained quite stringent throughout the crop year. Bread rations had to be maintained and even reduced in some countries. At the same time plans for the rehabilitation of live stock were postponed and it was not possible to build up reserve grain stocks of any consequence. Canada's 1947 crop was not large and with carryover stocks at July 1, 1947, at near minimum levels, exports of wheat and flour in terms of wheat reached only 195,000,000 bu., the smallest annual shipment of any crop year since 1938-39, when 160,000,000 bu. were exported. Exports of coarse grains during 1947-48 were also on a much reduced scale.

Wheat.—The 1947 Parliament amended the Canadian Wheat Board Act, 1935, to provide the powers required by the Board to carry out the Government grain policy. The amendments became effective on Aug. 1, 1947. The Act, as amended, authorized the continuation of the same system of marketing wheat and pooling of wheat delivered by producers. The most significant change was the substitution of a five-year pool period extending from Aug. 1, 1945, to July 31, 1950, for the previous system of separate pools for each crop year. During the war period the power to control interprovincial and export trade in wheat had been delegated to the Canadian Wheat Board by Orders in Council, but by the terms of the amended Act these powers were provided by statute until July 31, 1950.

On Sept. 15, 1947, price ceilings on bread and flour were suspended by the Wartime Prices and Trade Board. On the same day the Canadian Wheat Board discontinued the payment of the drawback on flour and wheat products, milled or processed from wheat of Western Canada grain. During the crop year 1947-48 the Wheat Board made payments on participation certificates issued to farmers in the 1944 crop year. The Minister of Trade and Commerce announced that producers would receive a total of \$66,000,000 as additional payment which would amount to 18.677 cents per bu. on the higher grades of wheat.

On Mar. 25, 1948, an increase was announced of 20 cents per bu., effective Apr. 1, in the initial payment made to farmers by the Canadian Wheat Board, this to be retroactive on all wheat delivered by farmers to the Board since Aug. 1, 1945. The increase brought the initial payment up to the level at which Canada was selling wheat to Britain in the second year of the four-year United Kingdom-Canada wheat contract. That price, fixed at \$1.55 per bushel, was advanced to \$2.00 plus carrying charges, basis in store Fort William-Port Arthur, in the third year of the agreement commencing Aug. 1, 1948.

Coarse Grains.—Price ceilings on feed grains were removed on Oct. 22, 1947. The Government announced, however, that the feed grain freight assistance policy would remain in effect. The subsidies on grains for live-stock feeding were also discontinued on Oct. 22. These subsidies amounted to 25 cents per bu. on wheat and barley and 10 cents per bu. on oats. Due to the shortage of feed grains in Canada in the crop year 1947-48, the Canadian Wheat Board on Sept. 13 advised the trade that, with minor exceptions, the issuance of export permits to cover exports of oats and barley, whole or otherwise processed, would not be approved during the remainder of the 1947-48 crop year. The exceptions were: registered and certified oats and barley, oats and prepared feed for certain destinations under Government established quotas, rolled oats, oatmeal and oat groats, barley malt and pot and pearl barley. The Board continued to collect equalization fees for exports of these products. Towards the end of the crop year it was possible to ease the restriction on exports and on Apr. 1, 1948, the Board advised that authorization would be given to export limited quantities of oats and barley to any destination. Offers, however, had to be made for human consumption within International Emergency Food Committee allocations. On May 13 a further modification was made which authorized the export of limited quantities of oats prior to Aug. 1, 1948, and limited quantities of barley prior to Sept. 1, 1948, to any destination without regard to I.E.F.C. regulations.

Licensed Grain Elevator Capacity.—At Dec. 1, 1947, total licensed grain elevator capacity in Canada stood at 482,425,000 bu., compared with 495,242,000 bu. in 1946. Western country elevators with their annexes made up over one-half of this total with 264,668,000 bu. capacity. Capacity for storing grain at the Lakehead was 76,267,000 bu., and West Coast, St. Lawrence and Maritime ports had facilities for holding 47,387,000 bu. ready for overseas movement. The detailed table giving grain elevator capacities formerly introduced here will be found in Section 3, Subsection 1, of this Chapter, at p. 803.

Wheat Flour.—The 1946-47 crop year brought with it an all-time high of wheat-flour production, amounting to 28,588,456 bbl., this figure being more than double the 1937-38 production of 12,867,728 bbl. Domestic disappearance of flour in 1946-47 decreased from 12,273,843 bbl. in 1945-46 to 11,660,184 bbl. in 1946-47, while Canadian customs exports of wheat flour advanced from 13,786,177 bbl. in 1945-46 to 17,660,109 bbl. in 1946-47 or by 28.1 p.c., a reflection of increased production of Canadian mills, coupled with heavy demands from foreign markets.

During the 1946-47 season, the mills operated at 100.8 p.c. of their rated capacity, this being accomplished by certain of the mills exceeding their monthly rated capacity through operating more than the customary number of working days per month. Statistics of employees, value of products, etc., for flour and feed mills for 1946 are given in Table 14 of the Manufactures Chapter at p. 566.

Section 2.—Live-Stock Marketings*

After the outbreak of war in 1939, there was a great increase in the demand for live stock and live-stock products in the form of meats, dairy products, poultry and eggs. These products were not only required in greater volume during the war years to meet the needs of the United Kingdom and her allies, but also to meet the demand in Canada which had expanded sharply as a result of greater purchasing power in the hands of the consumers. In the first full post-war year, declines occurred in commercial marketings of all classes of live stock compared with the previous year. Marketings of hogs in particular showed a sharp drop of 1,400,000 head. Cattle, calves, sheep and lambs, though they fell below the record high levels of 1945, showed comparatively minor declines.

Cattle marketed in Canada in 1946 numbered 1,900,768, as compared with 2,024,025 in 1945. Marketings of calves totalled 795,331 as compared with 830,346 in 1945. Marketings of hogs through commercial channels in 1946 totalled 4,465,260 as compared with 5,867,276 in 1945. Marketings of sheep and lambs were 1,162,786 in 1946 as compared with 1,254,672 in 1945.

The interprovincial and export movement of all classes of live stock in 1946 showed decreases from the previous year. Total shipments in 1946 with figures for 1945, in parentheses, were as follows: cattle 733,403 (742,245); calves 229,536 (247,919); hogs 769,800 (1,094,086); and sheep 372,176 (426,288).

* Revised in the Agriculture Division, Dominion Bureau of Statistics. For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 365-370 of this volume.

Section 3.—Warehousing and Cold Storage*

Among the means by which the utilities of ‘place’, ‘time’ and ‘possession’ are added to the products of industry, warehousing ranks high. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods. Moreover, its significance was enhanced by the emergencies of war that necessitated the rationing of scarce essential commodities. Such rationing policies were necessarily based on available supplies of goods and, since these were known only from the records of stocks in process of manufacture and in warehouses, statistics of warehousing became basic to distribution and rationing procedures.

* The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Resources, and National Revenue as well as of the Dominion Bureau of Statistics.

The great difficulty in presenting warehousing statistics lies in the fact that it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship to merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utilities of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Since the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not perhaps in the strict economic sense services which add the utility of 'time' to commodities already worked up into 'form'. At least, since some clear line must be drawn and because separate statistics of this branch of storage are not available, it is considered practicable to restrict the definition of warehousing as here used.

This Section as it appears in the current Year Book does not attempt to go much further than to draw together under one general heading statistics that have appeared piecemeal in former editions. The purpose is to develop the statistics of warehousing and gradually build up an improved and more co-ordinated series of data. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analyzed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Government excise officers who supervise all movements into and from such places of storage.

Subsection 1.—Licensed Grain Storage

At Dec. 1, 1947, total licensed grain storage in Canada stood at 482,000,000 bu., having declined 13,000,000 bu. from the level of Dec. 1, 1946. Since 1943, licensed grain storage capacity has dropped off considerably, largely as a result of the dismantling of temporary storage erected to handle the huge stocks of grain accumulated in the early years of the War. At Dec. 1, 1943, licensed grain storage capacity had reached an all-time high of 603,000,000 bu.

With Canadian grains in great demand both on the domestic and export markets the percentage of capacity occupied is currently quite low. Even in November, which is normally a peak storage month, the capacity occupied in both 1946 and 1947 stood at only 39 p.c. On Dec. 3, 1942, when both stocks in store and storage capacity were at near record levels, the licensed capacity occupied was just under 80 p.c.

At July 31, 1947, the end of the Canadian crop year, only 14 p.c. of licensed capacity was occupied. With this situation existing at the beginning of the next crop year and taking into consideration the below-average crop harvested in 1947, ample storage space was generally available in all positions during the 1947-48 crop year.

Additional information on the distribution, storage and inspection of the principal field crops will be found in Section 1, Subsection 2 of this Chapter.

8.—Licensed Grain Storage Capacity and Grain in Store, 1946-48

NOTE.—These figures are lower than those shown in Table 10, p. 364, for the reason that they do not include stocks in transit or in eastern mills.

Subsection 2.—Cold Storage and the Storage of Foods

Cold-Storage Warehouses.—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as R.S.C., 1927, c. 25), subsidies have been granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public: the Act and regulations made thereunder are administered by the Department of Agriculture.

There are nine classifications of cold-storage warehouses in Canada: (1) Public Warehouses which store foods and food products and of which the entire space is open to the public; (2) Semi-Public, or those which store foods and food products and which, while retaining part of the space for the products of the owner, allot the remainder to the public; (3) Private, or those which store foods and food products and allot no space to the public; (4) Creamery, which are used only for storing butter made in the creamery; (5) Creamery Locker having refrigerated space for their own butter and, in addition, lockers for rental to the public; (6) Cheese Factory, used only for storing cheese made in the factory; (7) Cheese Factory Locker, or those which have refrigerated space for their own cheese and, in addition, have lockers for rental to the public; (8) Locker, where the total space is occupied by lockers for rental to the public and which may, in addition, cut, process, chill and

freeze foods or food products for storage in lockers; and (9) Grading Station having refrigerated space used solely or principally for assembling cheese for grading purposes.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. As a general rule, those owned and operated by firms trading in the goods stored in the warehouses are designated "private", though most of these places rent space to the public when it is not required for their own purposes.

Cold Storage of Meat.—Figures of meat in cold-storage and other warehouses in 1947 are given in Table 11. The only product stored by the Meat Board of the Department of Agriculture consists of 'wiltshire' pork sides. This commodity is held for the purpose of evening out the export of bacon to the United Kingdom during the summer months when market deliveries of hogs are low. From late June to the end of September the sides are withdrawn as required from freezers, usually maintained at approximately 8°F., and defrosted and cured for shipment. Exporting packers make their own arrangements for storage space. Table 12 shows the proportion of 'wiltshire' pork sides stored in public warehouses and the quantities brought in from outside points.

Cold Storage of Fish.—Cold-storage holdings of fish averaged something more than 35,200,000 lb. monthly during the two years, 1946 and 1947. The 1947 stocks ran several million pounds above the 1946 level. As of Jan. 1, 1948, the stocks were 40,800,000 lb., somewhat though not greatly below the total at the beginning of the preceding year. Substantial fluctuations in the warehouse figures are the common condition. As a general thing, the quantities being held are larger in the later months of the year than at other seasons.

The great bulk of the fish in cold storage consists of frozen fresh fish (including some relatively small quantities of two or three kinds of shellfish) but there are also substantial supplies of smoked fish products. For instance, the smoked fish average for Jan. 1 in the three years 1946-48 was approximately 2,900,000 lb. Nearly all of the smoked-fish and frozen fresh stocks come from sea fisheries the most important being cod, haddock, halibut, herring and salmon. However, the frozen fresh-fish classification also includes large quantities of such species as whitefish and lake trout from the inland or fresh-water catch.

On both coasts various firms and individuals engaged in producing and marketing fish operate freezing plants which also include cold-storage chambers or warehouses. All the larger companies, at least, have both freezing and cold-storage facilities, very often at several plants. In both coastal areas there are also public or other warehouses which handle fish as part of their general cold-storage business. In the inland sections of the country there are plants concerned mainly with freezing and holding fish but for the most part cold-storage fish stocks, whether of local production or from outside, are handled by general warehousing companies.

Freezing and cold-storage facilities vary considerably both in poundage capacity and in temperature maintenance. For freezing purposes some develop temperatures of -40°F . or less while others operate at 0° or -5° or -10°F . For storage purposes, extremely low temperatures are not necessary. In some cases zero or lower may be the level and in other cases it may be anything up to 10° or 15°F . above zero. Federal fisheries technologists advise that in holding frozen fresh fish the temperature should not be higher than about -10°F . Smoked fish, though perishable, does not require such low holding temperatures as frozen fresh.

Cold Storage of Dairy Products.—Cold-storage facilities are a necessary adjunct in the manufacture of dairy products since most of them are perishable to a varying degree.

All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. Small country plants may have storage capacity for only fifty or one hundred boxes of butter with refrigeration capable of bringing the temperature down to around 20°F . These rooms are used mostly for the chilling of butter for printing. If the butter is not printed for immediate sale, the butter solids are disposed of or transported to central cold storages or larger creameries with better refrigeration facilities. Butter stored for a long holding period is usually carried at a temperature of -10°F . Larger creameries may have such storage facilities adequate to store several carloads of butter or the butter may be transported to private or public cold storages in the larger urban centres.

In the case of cheese, temperature control is important in the curing process as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for the production of 17 days during the period of maximum manufacture. The cheese is then transferred to central warehouses. Under the legislation administered by the Food and Drugs Act all unpasteurized cheese must be aged for 90 days before sale for consumption. During the first ten days following manufacture, the period when the cheese is maturing, the storage of the cheese must be at not less than 58°F . and during the remainder of the 90-day period at a temperature of not less than 45°F . For the holding period beyond 90 days the temperature is lowered to just above freezing point, especially if the cheese is to be held for a year or more.

Cold storages are essential in the ice-cream industry as the freezing of this product is part of the manufacturing process. Ice-cream hardening rooms are usually held at a temperature of -20° to -30°F .

Because of the perishable nature of milk the market milk industry must have cold storage too. As soon as the milk is bottled, it is placed in storage at a temperature of about 40°F . and held until the next day when it is delivered. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity, the temperature depending on the length of storage period.

Cold Storage of Other Foods.—During the years 1943-47 the holdings of apples in Canada at the beginning of the storage season on Dec. 1 averaged 53 p.c. cold and 47 p.c. common storage. Except in British Columbia, cold-storage space is inadequate to take care of the entire crop and consequently a large proportion of the production in Eastern Canada, particularly in Nova Scotia, is held in common storage. In pre-war years the bulk of the crop was exported to the United Kingdom and other markets early in the season but the sharp restrictions

in export outlets in recent years have necessitated longer storage and, although new buildings are being constructed, the space available in Eastern Canada is still insufficient. The temperatures at which apples are held vary somewhat by varieties but are generally in the neighbourhood of 30° to 32°F.

Potatoes are generally held at production points and shipped out as needed throughout the season. While warehouse storage is quite common in parts of the Maritimes where commercial production is centred, most of the crop is stored in frost-proof cellars and pits.

Subsection 3.—Storage of Petroleum and Petroleum Products

The storage facilities for petroleum and petroleum products in Canada consist of welded or bolted steel tankage located principally at refining and producing centres or at main distributing points. These centres are at or near Halifax, Quebec, Montreal, Toronto, Ottawa, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver. The loss through evaporation varies widely with the type of product being stored, the average atmospheric temperature, and the physical features of the storage tanks, some of which have special mechanical devices to minimize the loss. The use of aluminum paint on the outside of the tanks is of material aid in this direction.

The usual procedure is for the refining company to establish bulk storage plants at convenient distributing centres usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are distributed to smaller distributing depots or directly to retail outlets by rail or by motor-tank truck. While pipe lines are not used to any appreciable extent in Canada for transporting finished petroleum products, they are used for the transportation of crude petroleum to the Montreal, Sarnia, Calgary and Edmonton areas.

Subsection 4.—General Warehousing

Public Warehouses.—The Dominion Bureau of Statistics has recently undertaken a study of public warehousing. In 1944 the number of reporting companies was 133, a figure that increased to 141 in 1945 but fell off to 137 in 1946. Warehousing undertaken by co-operatives, packing houses and other businesses operating storage facilities in connection with their own business were not included. Many companies deriving more revenue from a carrier business than from warehousing were not covered. Table 14 was prepared for 127 firms that reported both for 1945 and 1946 to show the trend in the industry.

14.—Summary Statistics of 127 Public Warehousing Firms Reporting in 1945 and 1946

Item	1945	1946	Item	1945	1946
Total revenue..... \$	14,459,283	14,636,416	Wages, regular..... \$	4,222,747	4,450,726

Employees, regular.... No	3,226	2,985	Total salaries and wages. \$	6,204,943	6,570,916
Employees, casual..... "	754	422			

The net occupiable space for household goods reported by 137 companies in 1946 was 1,792,715 sq. ft. or 33·7 p.e. of the total dry storage space. Cold storage space for the same 137 companies amounted to 14,282,285 cu. ft.

Customs Warehouses.—Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes as follows: (1) those occupied by the Government of Canada, some of which are used for examination and appraisal of imported goods while others, known as King's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods. (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building. (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others or for the storage of unclaimed or seized goods. (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air.* (5) the yards, sheds and buildings intended for the storage of imported coal and coke. (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than pure-bred mares. (7) warehouses for the storage of animals, including horses for racing, and articles for exhibition or for competition for prizes. (8) warehouses for clover seed imported for the purpose of being re-cleaned and prepared for a foreign market. (9) the yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

Subsection 5.—Bonded Warehousing and Storage of Wines

The Excise Duty Branch of the Department of National Revenue considers any premises licensed by its officers to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits, or malt and

* Railways and express companies have similar facilities.

its by-products. Practically the total production of spirits is placed in bonded warehouses while only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or other agencies licensed by the Commissions to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes are secured in bond. The conditions under which spirits, beer and tobacco are stored are described in the following paragraphs.

Spirits.—There are three types of storage in distilleries. The first consists of metal tanks in bonded warehouses of from 15,000 to 40,000 gal. capacity, which are mainly used for the storage of alcohol or other high-proof spirits. The second type are rack warehouses of solid brick or cement in which 8,000 to 30,000 bbl. are stored on racks in tiers of four to five barrels high. The third type consists of bonded warehouse buildings in which casks and barrels of odd dimensions are stored on the floor, and to some extent, on skidways on top of the first row.

The tank warehouses are generally not heated. In most of the rack warehouses the heat is kept at a constant temperature and the humidity at a specific degree. The warehouse for barrels in tiers may or may not be heated. Many of these barrels are 100 gal. capacity and heating the warehouses would not appear to affect this size of cask.

There are also other bonded warehouses for the storage of alcohol to be used at a low rate of duty in the production of pharmaceuticals and perfume.

Beer.—After beer is produced it is run to storage tanks some of which are of metal and glass-lined while others are of wood. No constant degree of heat or humidity is necessary in a brewery warehouse, except in the storage of lager beer when the temperature is kept below the freezing point. Malt and malt syrup are also controlled under bond. Malt is stored in bins of wood or cement; these are Crown locked, as all malt in Canada, at present, is dutiable except when otherwise provided by the Excise Act. Similarly, malt syrup is dutiable except when otherwise provided. It is generally packed in drums of 25 lb. and upwards, and its use and distribution are controlled; in the manufacturer's premises it is held under Crown lock.

Tobacco.—Raw leaf tobacco when cured is, in the main, pressed in wooden hogsheads of 1,100 or 1,200 lb. weight. After shipment to the manufacturer it is stored in bond, since it becomes dutiable upon entrance to the manufacturer's premises and also after manufacture into cigars, cigarettes, smoking tobacco, etc. The field warehouses, where the tobacco is stored after curing, are not secured with Crown locks but shipment and sale by permit are regulated. Cigar leaf-tobacco is generally sold in cases so as not to injure the delicate leaf. The type used for fillers is packed in jute. After treatment by the packer it also is placed under Crown lock when received by the manufacturer.

Statistics of Spirits, Tobacco and Malt.—Table 15 shows the quantities of distilled liquor, tobacco, cigars and cigarettes placed in bond in recent years. The yearly inventory of breweries shows an increase of bulk gallonage of beer in stock from 9,358,000 in 1945 to 10,304,000 in 1946 and of bottled gallonage from 5,558,000 in 1945 to 5,944,000 in 1946.

In Table 16 the quantities of spirits, malt and tobacco products that have been released from bond for consumption are shown for the years 1939 to 1948. These figures, supplied by the Department of National Revenue, are the most reliable data for the consumption of these bonded products. In previous editions of the Year Book they have appeared under "Dominion Public Finance" (see p. 964 of the 1947 edition). Their transfer is a logical result of the reorganization of this Chapter and the newly introduced treatment of warehousing.

16.—Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, Years Ended Mar. 31, 1939-48

NOTE.—Figures for the years prior to 1900 are given in the 1916-17 Year Book, p. 528; for 1901-10, the 1933 Year Book, p. 840; for 1911-21, the 1938 Year Book, p. 855; for 1922-29, the 1945 edition, p. 936; and for 1930-37, the 1947 edition, p. 964.

¹ Figures include snuff.

Storage of Wine.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are their sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying their wines. A part of each year's production is, however, stored at the wineries at a cool and even temperature. Native wine held in storage for maturing and blending for the years 1944, 1945 and 1946 was reported as follows:—

<u>Year</u>		<i>Ontario</i>	<i>Other Provinces</i>	<i>Total</i>

Section 4.—Merchandising and Service Establishments*

Basic data for inquiries into marketing structure have been provided in the two comprehensive surveys of retail and wholesale business taken at the times of the 1931 and 1941 Censuses. The first covered business transacted in 1930 in wholesale, retail and service establishments including hotels. Tabulations of this material are to be found in Volumes X and XI of the Census of 1931. In the second, relating to transactions in 1941, the same general business types were followed with some additional detail concerning operations. Volume XI of the Census of 1941 contains results for the wholesale trade and service establishments.

In this issue of the Year Book more space is given to the results of current surveys in the distributive field and census material is treated only briefly in Subsection 1, partly because of its remote application to present-day conditions but also because the detailed data are readily available by reference to the above-mentioned census publications and to earlier editions of the Year Book. Descriptions and analyses of the material are to be found at pp. 596-621 of the 1945 Year Book and with slightly different emphasis at pp. 527-536 of the 1943-44 edition.

* Revised under the direction of W. H. Losee, Director, Census of Industry and Merchandising Division, Dominion Bureau of Statistics, by C. H. McDonald, Chief, Merchandising and Services Section.

Studies concerning operating results of independent retail stores are reviewed in the present Year Book for the first time, thus further extending the field of merchandising statistics.

Subsection 1.—Results of the 1941 Census of Merchandising

Wholesale Trade.—As mentioned on p. 812, detailed tabulations of the operations of wholesalers, together with explanations of the terms used in describing the various classes of wholesale business, are given in Volume XI of the Census of 1941, and in briefer form in previous issues of the Year Book. Table 17 recapitulates these data regionally, by type of operation.

Retail Service Establishments.—This group of businesses includes those that provide personal or repair services or that offer amusement or recreation facilities to the public. A portion of these firms indicated some merchandising in their returns, but were classified as services because the greater proportion of their annual business consisted of service receipts. The principal statistics on retail service establishments derived from 1941 Census returns are shown in Table 19.

Subsection 2.—Current Merchandising and Service Statistics

Certain phases of current distribution statistics are based on the application of the sampling method because the number of business firms prohibits monthly or even annual coverage. Wholesale and retail sales indexes depend to a large extent on this technique. On the other hand complete or near-complete coverage is possible in some fields such as automotive sales and financing, chain-store operations, theatre, power-laundry and dry-cleaning, and farm-implement sales statistics. Studies concerning the operating results of independent retailers have been a part of the program of merchandising statistics for some time, but summaries of these surveys now appear in the Year Book for the first time. Monthly and annual bulletins are issued for each of the fields covered in this Subsection, and are available by application to the Dominion Statistician.

Wholesale Trade.—Monthly index numbers of sales in several branches of the wholesale trade have been prepared since 1935. Indexes of sales (on the base 1935-39=100) are calculated each month for nine wholesale trades, based on reports received from a sample of some 415 firms whose sales made up about 68 p.c. of the total volume of business done by wholesalers in those trades in 1941. The sample of reporting firms is limited to wholesalers proper, i.e., wholesale establishments that perform the complete functions of jobbers or wholesalers, buying merchandise in large quantities on their own account and selling in broken lots.

INDEXES OF WHOLESALE SALES 1935-39=100

ANNUAL INDEXES

MONTHLY INDEXES OF WHOLESALE SALES FOR SELECTED TRADES

In addition the trades selected are those engaged principally in supplying retailers and include the following: automotive supply and equipment, drugs, clothing, footwear, dry goods, fruits and vegetables, groceries, hardware, and tobacco and confectionery. Inventory figures are limited to fewer trades and a smaller sample, since not all firms are able to provide month-end inventory figures as required.

Recent Trends.—Sales indexes for total wholesale trade gained about 19 p.c. in 1946 compared with 1945 and 12 p.c. in 1947 against 1946. The composite index of dollar sales for the nine major wholesale trades (1935-39=100) reached approximately 244.0 for 1946 and 272.3 for 1947. These indexes are not corrected for price changes that have affected trading. Among the individual trades, dry goods registered the greatest advance in 1947 compared with 1946, but showed the smallest percentage increase over 1941. Hardware and groceries wholesalers also showed substantial increases in dollar sales between 1946 and 1947, amounting to about 17 p.c. in each case. Clothing registered an increase of 11 p.c. The automotive equipment trade with 1947 sales 134 p.c. above 1941, experienced a gain of 11 p.c. over 1946. Footwear and tobacco and confectionery sales, which followed automotive equipment in the amount of increase in volume over 1941, showed a tendency to level off in 1947 when the advances over 1946 were 8 p.c. and 7 p.c., respectively. Dollar sales of fruits and vegetables in 1947 receded 6 p.c. from the 1946 volume after reaching a high in the latter year of 122 p.c. above the 1941 level. The chart on p. 815 illustrates the annual course of wholesale sales indexes since 1935 and the seasonal characteristics of wholesale sales in selected trades. Table 20 contains annual sales indexes of the nine major wholesale trades from 1941 to 1947.

¹ Subject to revision.

Retail Trade.—The retail trade of Canada in 1946 was estimated at \$5,506,286,000. It appears evident from preliminary data that sales reached about \$6,250,000,000 in 1947.

Record sales volumes attained in recent years are consistent with the broad expansion of the country's economy during and after the Second World War. The most notable development in merchandising since the end of the War was the rapid growth in sales of durable consumer goods many of which were distributed

on a rigidly controlled basis, or were absent entirely from the retail market during much of the war period. Increases for automotive, radio and appliance, furniture and hardware stores were very substantial in 1947. Some of the purchasing momentum which carried sales of durable goods trades to new high levels was reduced in the early months of 1948, as dollar volumes for these reached a level comparable with that of many of the non-durable goods trades.

The trend in Canada's total retail trade from 1930 onwards is traced in the following statement. Sales figures quoted for 1930 and for 1941 are census results while those for other years are derived from trend information obtained by the sample survey method referred to on p. 814. Such surveys are conducted monthly for 14 trades and are supplemented with other information derived from annual surveys and other projects. Statistics thus procured are much less detailed than those produced from census results.

¹ Preliminary.

Trends in 1946.—Table 21 contains a summary of sales in the years 1944 to 1946 showing provincial totals and results for kind-of-business groups and selected trades. Sales were on the up-grade in practically every instance, but the emphasis on durable goods is evidenced by the much higher-than-average gains for the automotive, building materials, and furniture-household-radio groups. The automotive trades led the upward advance with an increase of 70 p.c. over 1945, mainly the result of the reappearance of new motor-vehicles on the retail market. In 1946, the average increase in sales for Canada was 20 p.c. over 1945, though increases in some of the trades dealing in soft goods were of a lesser magnitude.

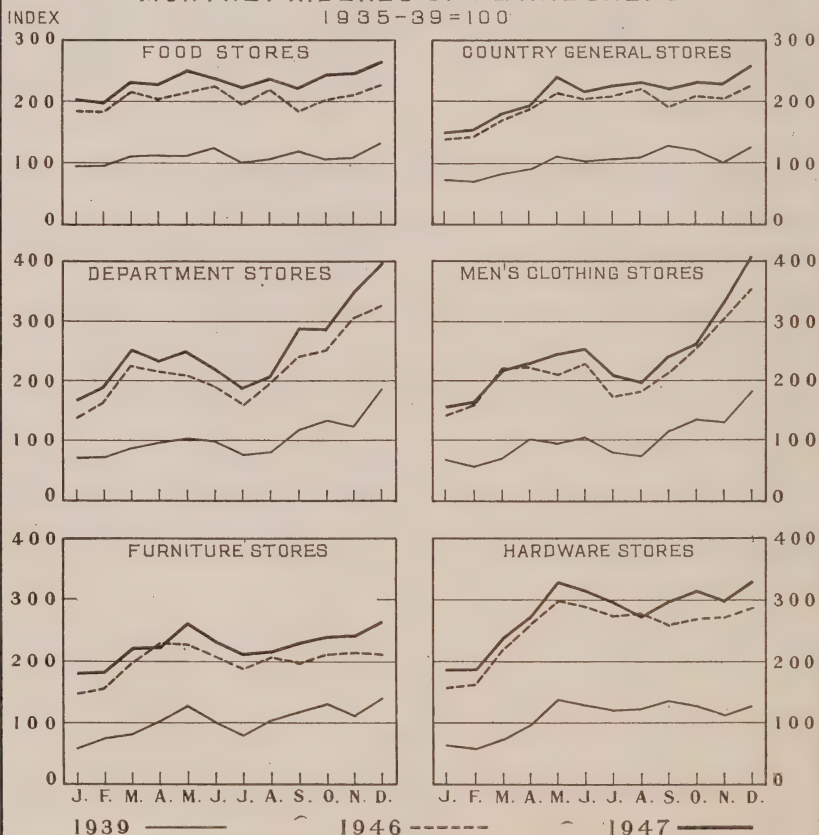

Food stores normally account for about one-fifth of all consumer expenditures in retail stores. Volume of sales for the food group in 1946 was \$1,230,492,000, 11 p.c. higher than in the previous year. The general merchandise group, another major category which includes departmental stores, had sales amounting to \$849,095,000 in 1946, or 18 p.c. more than in 1945. Country general stores and the apparel group marked up moderate gains over 1945.

Preliminary estimates place the total dollar volume of retail trade in 1947 at \$6,250,000,000. By the latter half of the year sales of durable goods had begun to display much smaller gains than in the previous months. Store sales of food, influenced by climbing prices, had begun to absorb more of the consumer dollar and in 1947 stood 13 p.c. above the previous year. This group of stores (grocery, combination meat and grocery and meat markets) continued to show heavy gains in the early months of 1948. The various store types in the apparel group increased between 7 p.c. and 10 p.c. compared with 1946.

² The disparity between figures for government liquor stores shown here and those appearing in Table 23 arises from variations in the processes used in developing the two series.

Chain Stores.—Chain stores sales in 1947 amounted to \$1,170,029,000, a gain of 15 p.c. over 1946, when sales volume was \$1,014,847,000. Sales in the average of 6,653 chain store units made up 18.7 p.c. of all retail sales in Canada. Chain-store statistics are summarized in Tables 22 and 23.

New Motor-Vehicle Sales.—In 1947, a total of 230,255 motor-vehicles were purchased in Canada at a value of \$416,237,495, an all-time record in both numbers and value. The values used are prices actually paid by purchasers at point of manufacture, including sales and excise taxes, charges for standard accessories and dealers' commissions, but excluding freight charges from factory to point of purchase. Of the total, 159,205 units or 69 p.c. were passenger vehicles, more than double the 1946 total of 77,742. Increases in list prices due to rising manufacture costs and added excise taxes raised the average value of passenger vehicles sold to \$1,779 in 1947 as compared with \$1,548 in 1946 and an approximate range of \$1,000 to \$1,100 in the immediate pre-war years.

With the exception of certain higher-priced models, vehicles were sold as soon as shipments were made available from factories or from border points in the case of imported motor-cars. With effective demand at all times being equal to available shipments, the seasonal pattern of sales is determined by availability rather than demand. The trend was upward throughout 1947 and continued so in the early months of 1948 but with a slower rate of increase, due more to fewer units being imported from the United States rather than to any falling-off in demand.

Financing of Motor-Vehicle Sales.—The financing of motor-vehicles accounted for 87 p.c. of all retail financing activities of the 90 finance companies in operation at the time of the 1941 Census. The remaining 13 p.c. consisted of paper issued mainly on radios and household appliances, with smaller amounts on furniture, jewellery and clothing. Motor-vehicles may be financed through such sources as personal loans, bank loans, etc. For this reason the statistics shown in Table 25 represent only a partial picture of the financing of purchases of new and used motor-vehicles.

The proportion of new motor-vehicles sold which has been financed through finance companies and the proportion of their financed value have varied greatly in the years for which statistics are available. The low percentages characteristic of 1946 and 1947 demonstrate two principal factors: first, that ready cash in large amounts in the hands of the public allowed the buying outright of this commodity; and secondly, that loans for the purpose of purchasing motor-vehicles have been more readily procured from sources other than finance companies than was the case in the 1930's.

Farm Implement Sales.—Annual reports on the sale of farm implements and equipment in Canada, based on returns submitted by Canadian manufacturers and by importers have been compiled and published by the Bureau of Statistics since 1936. In 1945 the reporting was expanded to include a larger number of classes of farm implements, and to provide a tabulation of sales in the Prairie Provinces by type of implement.

Domestic sales of farm implements and equipment as reported by manufacturers and importers, mainly at wholesale prices to dealers or agents, amounted to \$81,698,185 in 1946, an increase of 27.1 p.c. over 1945. This was the highest volume of sales recorded since the inception of this series of annual reports in 1936. The figures exclude sales of parts, binder twine, motor-trucks or used equipment. Supplementary information indicated that in 1946 an average mark-up of 20.5 p.c. may be applied to the wholesale sales figures to bring these to a retail basis. On this basis, retail sales of farm equipment and machinery during 1946 amounted to about \$98,446,313.

Sales of repair parts, also secured from manufacturers and importers, were \$20,790,007 in 1946, a gain of 11 p.c. over the 1945 figure of \$18,734,009. The retail value of repair parts sold in 1946 was approximately \$27,380,439, obtained by applying an average mark-up of 31.7 p.c.

Preliminary estimates indicate that sales of farm implements and equipment in 1947 advanced 47.7 p.c. above 1946, amounting to \$120,649,687. While sales increases in 1946 were more pronounced in the Maritimes, Quebec and Ontario, the 1947 estimates reveal a concentration of gains in the Prairie Provinces.

27.—Farm Implement and Equipment Sales, by Provinces, 1946-47

NOTE.—Values are mainly at wholesale prices.

Motion Picture Theatres.—In 1946, there were 1,477 theatres in Canada, representing an increase of 154 over 1945. A further increase of 216 theatres in 1947 brought the total to 1,693, according to preliminary figures. Box office receipts in 1947 totalled \$78,653,799, an increase of 5 p.c. over the \$74,941,966 receipts in 1946. Taxes collected by Federal and Provincial Governments amounted to \$16,375,226 in 1947 and \$15,052,994 in 1946. Net receipts in 1947 were \$62,278,573 or 4 p.c. in excess of 1946. Preliminary figures indicate that paid admissions dropped slightly from 227,538,798 in 1946 to 220,714,785 in 1947.

In the 1,477 theatres reporting in 1946, 12,226 persons were employed of whom 1,270 were active proprietors or partners. Salaries and wages paid to employees amounted to \$10,466,251, a figure which excludes the withdrawals of proprietors and partners.

The number of exhibitors employing portable equipment, classified as itinerant operators, increased from 167 in 1945 to 288 in 1946. In 1,248 towns at which performances were given, 2,417,990 persons paid admission totalling \$745,978 of which \$131,693 was paid in taxes to Federal and Provincial Governments. Legitimate theatres in 1946 numbered 5, and had 956,473 paid admissions totalling \$1,121,628 in net receipts and \$263,302 in taxes.

28.—Motion Picture Theatres and Receipts, by Provinces, 1930, 1941, 1946 and 1947

NOTE.—Itinerant operators and legitimate operators are not included in these figures. Receipts are exclusive of amusement taxes.

Power Laundries, Cleaning and Dyeing Establishments.—Annual reports on this service trade have been issued by the Dominion Bureau of Statistics since 1930. Summary data appear in Table 29, together with regional statistics for 1946.

Receipts of the 690 power laundries, cleaning and dyeing plants in 1946 amounted to \$51,148,159, 16 p.c. higher than the receipts of 602 establishments reporting for the year 1945. Of the total receipts, laundry work accounted for 42 p.c.; dry cleaning and dyeing, 52 p.c.; coat and towel rentals, 4 p.c.; and all other work, 2 p.c.

Operating Results of Retail Stores.—Studies concerning the operating ratios of independent retail merchants have been carried on over an extended period by the Merchandising and Services Section of the Dominion Bureau of Statistics.

Such statistics have been gathered to assist merchants in assessing the efficiency of various phases of their operations, to provide estimates of the contribution made to national income by unincorporated retail stores and to assist the prospective entrant into any of the retail trades in sizing up his opportunities and prospects of success. Since publication of recent detailed studies, their value as a basis for marketing research and as essential elements in the understanding of the structure of retail distribution has become evident.

Attention has been focussed on the relations between net sales, gross trading profit or margin, operating expenses and net profit. Expenses have been examined in some detail to include salaries and wages paid to employees; advertising; store supplies; losses on bad debts; tax and insurance costs; rentals; heat, light and power used; repair and maintenance expense; depreciation; and other items.

While certain operational features of the retail trade are a part of the annual summary of distribution from 1933 to 1940, it has been only since 1944 that comprehensive surveys have been made. These have depended upon representative samples of firms for basic data. In most of the trades, results are available for 1944, 1945 and 1946 in detail, with certain phases of the information extant for 1941 and 1938.

30.—Operating Ratios in Retail Trades, by Kinds of Business, 1946

NOTE.—Independent, unincorporated firms only. All figures except stock turnover are percentages of net sales.

Section 5.—The Co-operative Movement in Canada*

An outline of the growth of co-operative activity in Canada and of the legislation passed in connection therewith, is given at pp. 543-545 of the 1942 Year Book. Developments leading up to the appointment in November, 1944, of a Royal Commission to inquire into the application of income tax and excess profits tax to co-operatives are given at pp. 618-624 of the 1946 edition. Amendments to the Income War Tax Act based on the report of that Commission and passed in August, 1946, are given at p. 838 of the 1947 edition.

Trends in the Crop Years Ended July 30, 1946 and 1947

Co-operation in the marketing of farm products and in the purchasing of farm supplies and consumer goods has increased steadily during the past 16 years. For the crop year ended July 31, 1947, 2,095 associations reported as compared with 1,953 for the previous crop year. Of the 1947 total, 1,124 were engaged in marketing and 1,548 in purchasing supplies for their members. The larger number of associations purchasing supplies is explained by the fact that many co-operatives, organized primarily to market produce, purchase supplies as well and a few purchasing co-operatives market produce as a part of the service given their members. There is thus some duplication in the totals.

Summary statistics of the reporting associations are given in Tables 31-33. The numbers of members and patrons in 1947 were the highest on record, Manitoba and Saskatchewan showing the most substantial increases over 1946. It should be noted, however, that there is also duplication in these figures since many members, and farmers especially, belong to more than one co-operative. Assets and liabilities were both slightly higher in 1947 than in 1946; value of plant increased by over \$6,000,000 but working capital was less by about \$2,000,000. Total business reported by the co-operatives for the crop year 1946-47 amounted to \$712,583,246 a record volume which exceeded the figure for the previous year by over \$158,000,000.

* Prepared by W. F. Chown and J. E. O'Meara, Marketing Service, Economics Division, Department of Agriculture, Ottawa.

Part of this increase resulted from a very large increase in returns for the Province of Ontario and part from the rise in the general level of prices which occurred during the period.

Marketing.—Sales of farm products in 1946-47 increased by about \$124,000,000 over the figure for the previous year. Every product that co-operatives market in Canada showed an increase in sales value with the exception of honey and wool. Wool sales decreased by only a small amount but in 1946 the honey crop was almost a complete failure and sales by co-operative honey producers were down by well over 50 p.c. Sales value of grains marketed increased by \$78,000,000, fruits and vegetables by \$14,000,000, tobacco by \$16,000,000, dairy products by \$6,000,000, and poultry and eggs by \$2,000,000. All provinces reported increases in the value of farm products sold with the exception of New Brunswick where sales were down by \$471,000. Saskatchewan, Ontario and Alberta all reported sales volume increases ranging from \$25,000,000 to \$35,000,000.

Marketing co-operatives handled approximately 31 p.c. of the main farm products entering commercial channels of trade in 1946-47 as compared with 28 p.c. in 1945-46. Marketings as a percentage of the total of various products were as follows, with the percentage for the previous year in parentheses: Grains 53 p.c. (50); dairy products 22 p.c. (21); live stock 18 p.c. (16); poultry and eggs, 17 p.c. (16); wool, 73 p.c. (58); fruits and vegetables, 32 p.c. (27); maple products, 12 p.c. (28); tobacco, 87 p.c. (88); honey, 11 p.c. (23).

Merchandising.—The reported sales value of supplies and goods purchased by co-operatives for distribution to members and patrons for the year 1946-47 amounted to \$127,001,488. This increase of \$31,398,177 marks the first time that the merchandising sales volume has been greater than \$100,000,000. The greatest single increase was recorded in feed and fertilizer with total sales of \$53,400,000 compared with \$38,000,000 for the previous year.

Wholesaling.—There are 11 large co-operative associations in Canada mainly concerned in the wholesale distribution of farm supplies and consumer goods to local stores and farm supply co-operatives. Because of differences in structure accurate membership figures are not available. Total assets reported in 1946-47 amounted to \$14,500,000, liabilities to the public \$7,500,000 and liabilities to members \$1,200,000. Members' equity amounted to \$7,000,000.

Goods and supplies purchased by the wholesales and distributed to their members had a sales value of over \$40,000,000, over 50 p.c. of which was feed and fertilizer, an increase of \$3,000,000 over the previous year. Food products, farm machinery and petroleum products sales amounted to \$14,800,000 in 1946-47. Farm products marketed by the wholesales on behalf of both individual members and corporate members in the same year amounted to \$43,900,000. The main product marketed was live stock with a sales value of \$22,800,000, followed by dairy products at \$14,500,000 and eggs and poultry at \$4,400,000. Grain, fruits and vegetables constituted the remainder.

Co-operative Stores.—During 1946 there were 991 co-operative stores and branches in Canada which reported a sales volume of \$45,893,742 to 166,000 members. In 1947 the number of stores increased by 36 to a total of 1,027 with a reported membership of 185,210 and total sales of \$49,582,938.

Fishermen's Co-operatives.—In addition to the co-operative business summarized in the tables of this report, there were 83 co-operatives with a membership of 10,826 mainly engaged in the marketing of fish during 1946-47 as compared with 87 in 1945-46 with a membership of 11,575. The value of fish marketed by these groups was \$10,558,912; fishermen's gear and bait as well as consumer goods such as groceries, dry goods and clothing with a sales value of \$1,515,276 in 1946-47 were also handled. The corresponding figures for 1945-46 were \$10,720,331 and \$1,392,101, respectively.

Credit Unions.—Statistics for credit unions are given in the Currency and Banking chapter at pp. 1047-1051.

Miscellaneous and Service Type Co-operatives.—During 1946 there were 2,354 co-operative telephone systems in Canada with a total investment of \$22,600,000 and 117,656 connected instruments, as compared with 2,368 systems, investment of \$21,200,000 and 99,851 telephones in 1945. Other services provided co-operatively include housing, board and room, transportation, fire and life insurance, funeral services, electricity, machinery and electrical repairs, medical services and hospitalization. Increased interest in the latter has led to the organization of a score or more co-operative medical services in Ontario alone and these have recently organized themselves into the Co-operative Medical Services Federation.

Section 6.—Food Consumption

Consumption of Major Foods.—A study of consumption of the major foods was undertaken during the war years by the Agricultural Division of the Bureau of Statistics in recognition of the national and international significance of such information. While data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., have been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The study has been continued during the post-war years but, whereas the comparison during war years was between peacetime and wartime levels of consumption, the comparison is now made between pre-war and post-war levels.

The series in Table 34 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the post-war years 1946 and 1947 (the estimates for 1947 are subject to revision).

The figures represent available supplies including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except meats for which the figures are worked out at the wholesale stage. The amounts of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since storage stocks in the hands of retailers and consumers were not available. In the main, however, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, as for example: milk solids (dry weight) in the case of the dairy products group; fat content in the case of fats and oils; and fresh equivalent in the case of fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

34.—Per Capita Supplies of Food Moving into Consumption, 1946 and 1947, with Averages, 1935-39

NOTE.—Many figures in this table have been revised since the publication of the 1947 Year Book, due to the regrouping of component items of certain groups.

¹ Subject to revision.² Fluctuations in apparent per capita flour consumption are partly due to the fact that complete data on flour inventories in all positions are not available. For example, in 1947 the consumption is probably understated due to a non-inclusion of quantities of flour moving into consumption from inventories accumulated in commercial channels during the previous year or so.³ Not available.⁴ Includes farm-made cheese.⁵ Less than 0.05 lb.

Consumption of Meats.—The supply, distribution and per capita consumption of meats and lard are given in detail in Table 35. The per capita estimates represent the consumption of the civilian population only. In order to arrive at a proper comparison of meat consumption during 1940-45 with the years before the War, figures of supply were revised to compensate for amounts of meat used for non-civilian purposes. These deductions included purchases by the Department of Munitions and Supply for the Army, Navy and Air Force, supplies for ships' stores, Red Cross parcels and other similar uses.

The Canadian population figures used to arrive at the per capita consumption estimates were also adjusted for the members of the Armed Forces serving outside Canada and living in barracks in Canada. All estimates in Table 35 are on a carcass weight basis except canned meats which are in terms of the product.

¹ Revised since the publication of the 1947 Year Book. ² Subject to revision. ³ Edible meat excluding offal.

⁴ Basis cold dressed carcass weight. ⁵ Includes edible offal of beef and veal.

⁶ Quantity small; included with beef. ⁷ Edible meat excluding fats and offal.

⁸ The positive changes represent deductions from the available supply during a given year and therefore are subtracted; similarly, negative changes represent an increase in disappearance. Where no changes are indicated it is assumed that stocks at the beginning and end of period were the same.

⁹ Estimated.

¹⁰ Negligible.

¹¹ Includes rendered pork fat.

Section 7.—Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. But freight might be imported by rail and exported by water, as is the case with western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 36 must not be taken as a measure of total interprovincial trade: they indicate only the interprovincial movement of railway freight which is one aspect of that trade.

* Revised by G. S. Wrong, Director, Transportation and Public Utilities Division, Dominion Bureau of Statistics.

¹ Figures for freight originating and freight terminating do not agree because that freight which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1947, for instance, originated within the previous year.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting Distribution and Trade, 1947-48*

With increased domestic production and a heavier volume of imports, supplies showed substantial improvement in 1947, though a few more or less acute shortages persisted. An easier labour situation and the recovery of raw material supplies, both domestic and imported, were reflected in a significant expansion of output in many lines. In the important fields of metals, durable goods, building materials, pulp and paper products and textiles a very high level of activity was achieved and production of some items reached record levels. Supplies of some important commodities such as steel, farm machinery, durable goods and textiles (particularly cotton textiles) were further increased by a higher volume of imports. Agricultural production in contrast to the general trend in domestic output fell off somewhat though there were gains in some lines. The supply of oils and fats improved slightly with larger imports but remained sufficiently acute to require the continuation of quota restrictions on industrial use. Similarly the tin supply eased somewhat in the latter part of the year but, since tin is still under international allocation, control was retained to protect essential uses for this metal and restrictions on the manufacture and use of metal containers were also continued.

With the exception of these and a few other controls retained in some important cases (notably lumber and agricultural products) to protect domestic requirements and prevent the forcing up of prices in the Canadian market to high export levels, all supply and distribution controls associated with the post-war stabilization program were withdrawn during 1947. Export controls were lifted on a large number of products, generally concurrent with or shortly after the lifting of ceiling prices on the commodity concerned. Food rationing was ended with the termination of the rationing of meat, butter, evaporated milk and sugar. Various restrictions in the textile and pulp and paper fields were also discontinued. The situation is reviewed in detail below.

Equitable Distribution Policy.—Under the original Policy governing the distribution of goods in short supply, manufacturers and wholesalers of scarce goods had been required to allocate supplies to their customers on the basis of 1941 sales to these customers. Subsequently some goods had been exempted from the application of the Policy while, for certain other goods, freedom of distribution with respect to 20 p.c. of current supplies had been permitted provided that reasonable quantities were made available to ex-service men. In January, 1947, all goods remaining subject to the Policy were placed in the latter category. At the same time a number of additional items were entirely freed from the application of the Policy. The scope of this control was steadily narrowed through 1947 as goods released from ceiling prices automatically ceased to be subject to the controls of the Equitable Distribution Policy as also did those that were no longer in short supply. However, late in the year the canned fruits and vegetables and canned citrus fruit juices on which ceilings had been reimposed were placed under the Policy as an aid to the effective enforcement of ceiling prices.

* Prepared by the Wartime Prices and Trade Board. This article deals with developments in 1947 and the first half of 1948. Information on distribution controls and rationing since their inception during the war years is given in the Year Books 1943-44 (pp. 521-526), 1945 (pp. 564-571), 1946 (pp. 574-578), and 1947 (pp. 757-763).

Licensing.—Licensing controls on the establishment of new businesses or the undertaking of new lines of business were withdrawn in 1947. These regulations had been introduced late in 1942 as a necessary supplementary control for the Board's general purposes and in particular had facilitated the Policy of Equitable Distribution and had served the beneficial purpose of preventing an undesirable expansion in trade outlets at a time when goods were scarce. Later the regulations were considerably modified and after June, 1944, licences were issued freely except in cases where the applicant would require a quota or ration of some commodity under strict distribution control such as sugar. On Apr. 7, 1947, by which time a considerable number of items had been decontrolled, the regulations were substantially relaxed. Licences continued to be required only by those persons dealing in any goods or services still subject to price control and where, for price fixation and enforcement purposes, licensing requirements still remained essential. In addition all businesses using sugar quotas continued to require licences though their products had in some cases been decontrolled. All coke and coal dealers were likewise required to hold licences though these commodities were released from ceiling prices on Apr. 16, 1947. These exceptions were necessitated by the Board's continuing interest in supply and distribution in these fields. Finally on Nov. 15, 1947, all licensing regulations were withdrawn with the exception of those affecting fuel dealers.

Foods.—Though some foods, both domestic and imported, were available in substantially greater quantities, domestic agricultural production in some important lines was down from 1946. Crops of fruits, vegetables and grains were in most cases smaller than the crops of 1946 and were only fair by average standards. Meat production was about 6 p.c. below 1946 output, owing partly to reduced supplies of feeds. The decline was concentrated in beef supplies; inspected slaughterings of cattle were about 23 p.c. fewer than in the previous year. On the other hand, the downward trend in hog slaughterings from wartime peaks appeared to have been checked and inspected slaughterings increased about 4 p.c. Egg and poultry production reached markedly high levels. The production of milk was slightly greater than in 1946 but fluid milk sales were down about 2 p.c. Increases in the production of butter and concentrated milk products were achieved at the expense of a serious decline in the already low cheese output. Sugar was one of the bright spots in the supply picture as a result of an exceptionally good Cuban crop. Despite some continuing difficulties the removal of supply controls in the foods field had been largely completed by Sept. 15, 1947.

Meat.—Meat rationing was discontinued on Mar. 27, 1947, after a duration of approximately eighteen months. It had been imposed for a second time in September, 1945, as a means of making more meat available for export to the United Kingdom. The rationing of meat was an expensive and difficult operation from both the standpoint of Government administration and the extra burdens imposed upon farmers, commercial slaughterers, meat distributors and consumers. It was particularly important, therefore, not to prolong it further than was absolutely necessary. The regulations governing the observance of meatless days in restaurants and public eating places were withdrawn on Aug. 15, 1947.

Hog-slaughtering quotas, an integral part of the machinery of meat rationing, were discontinued as early as Apr. 20, 1947, in so far as general application was concerned. However, to protect United Kingdom requirements for pork, the Meat Board of the Department of Agriculture continued to keep all inspected

packers, which handle the bulk of pork going to market, under domestic hog-slaughtering quotas. These quota restrictions remained in effect until the end of September. Other Board regulations associated with the control of meat distribution—those providing for permit control of all slaughterers and for the stamping of all meats—were terminated concurrently with the lifting of ceiling prices on meats on Oct. 22, 1947.

Butter.—The rationing of butter, introduced in December, 1942, continued through the early part of 1947 at the rate of 6 ounces per week until June 9, when it was terminated. With the removal of rationing, butter consumption increased and in spite of greater production there were acute local shortages during the late winter and early spring of 1948.

Cream.—A number of controls affecting the supply and distribution of dairy products were withdrawn in April, concurrently with similar decontrol action by the Department of Agriculture. On Apr. 1, 1947, the Board terminated controls which had limited the butterfat content of fluid cream to 18 p.c. and had thus prohibited the sale of whipping cream, and had restricted the number of grades of cream that might be sold by distributors. Restrictions limiting monthly sales by cream distributors in about 80 important markets, on the basis of their sales in June, 1944, were also withdrawn.

Cheese.—At the beginning of April, 1947, with the approach of the heavy production season, restrictions on the distribution of cheddar cheese were withdrawn. Under these controls, imposed in October, 1946, the Administrator had directed the allocation of supplies as between the domestic and export markets. However, in August, 1947, when production was falling off very sharply the Dairy Products Board of the Department of Agriculture resumed the requisitioning of cheese for export to the United Kingdom until the end of November, 1947.

Evaporated Milk.—Restrictions on the sale of evaporated milk were removed on June 9, 1947, concurrently with the lifting of ceiling prices on this product. Under the priority system, as established in October, 1943, sales of evaporated milk in areas adequately supplied with fresh milk had been restricted to infants and invalids, while in "deficiency areas" these users received first priority. Subsequently it had been possible to relax the regulations by removing controls in areas deficient in fresh milk and also by lifting all restrictions in the western provinces. In November, 1946, however, it had been necessary to extend the area of control and prior to its termination the priority system had been in effect in the southern parts of Ontario and Quebec, some parts of the Maritimes and many of the large cities and towns of Western Canada. In these areas sales of evaporated milk had been restricted by coupon to infants and invalids.

Sugar.—The sugar supply position improved rapidly during the year, culminating in the termination of rationing to consumers and industrial users on Nov. 3, 1947. Previous to this the ration had been liberalized both by increases in the amount of the sugar allowance itself and by the removal of various items from the list of rationed preserves, thus making more coupons available for the remaining sugar-preserve alternatives.

The rationing of maple syrup and maple sugar was discontinued in February, 1947, with the approach of a new maple products season. Improved supplies permitted the removal from the ration list of corn, cane and blended syrups in March followed by jams, jellies, marmalade and honey on June 9, 1947.

The consumer sugar and preserves ration was increased approximately 14 p.c. on Apr. 1, 1947, bringing it from 7 to 8 lb. per quarter. Industrial users were given an increase of 10 p.c. of 1941 usage on which their quotas were based. After this, adjustment quotas for industrial users stood at the following percentage of 1941 usage: bakers, 90 p.c.; biscuit and cereal manufacturers, 85 p.c.; and soft drink and confectionery manufacturers, 80 p.c. Quotas for hotels, restaurants, hospitals and other such places were increased by corresponding amounts. Further increases were announced on June 25, as a result of increased allocations by the Emergency Food Council. An extra 3 to 4 lb. was to be added to the consumer ration in the last half of the year, the first two additional coupons becoming valid in August. Quotas for industrial users were again advanced by 10 p.c. over the 1941 usage. In the following months the sugar supply situation continued to ease and finally on Nov. 3, 1947, the rationing of sugar and edible molasses was terminated.

Canada's total allocation for 1947 amounted to 633,000 short tons of raw sugar, part of which was domestic production. This compared with a 1946 total allocation of 504,000 short tons. The actual distribution in 1947 at 98.1 lb. per capita, raw value, compared with 79.2 lb. per capita in 1946 and was close to the average pre-war (1934-38) consumption of 102.1 lb.

Wheat.—It was necessary in the early summer of 1947 to restrict the quantity of wheat that could be milled or processed for domestic consumption. To prevent hoarding in the expectation of decontrol and at the same time help maintain shipments of wheat and flour abroad at a high level, quotas based on 1945 usage were set. These restrictions were withdrawn on Sept. 15, 1947, when ceiling prices on flour were removed.

Oils and Fats.—During 1947 all supplies of oils and fats continued to be allocated by the International Emergency Food Council. The world supply showed some improvement and this was reflected in an easing in the Canadian supply position. It remained necessary, however, to continue restrictions on the use of oils and fats; quotas to industry were maintained and were increased in the case of shortening manufacturers.

Metals.—As at Mar. 31, 1948, a few key controls remained in the metals field. In view of extremely heavy demands for steel supplies the output of iron and steel continued to be directed by the Department of Reconstruction and Supply to obtain the most effective utilization of capacity and the maximum output of finished steel products. Despite the serious shortage of scrap, both cast iron and steel, the output of steel reached a very high level. In addition to the direction of steel production there were several priorities affecting the distribution of iron and steel products. Steel mills and foundries were required to meet specified minimum requirements of manufacturers of farm machinery. The requirements of the housing program also received priority and assistance was given for the procurement of steel plate tonnage for the domestic railway car building program and for ship-building.

Tin continued in short supply; world stocks had been heavily drawn upon in previous years and replacement was slow. Allocation by the Combined Tin Committee continued and careful utilization of supplies was necessary. During the first half of the year all tin, both primary and secondary, was released on the basis of 75 p.c. of 1946 usage. However, extra quantities were allocated over and above quota for certain essential requirements. During the last half of the year

the supply eased somewhat and releases were allowed on the basis of 100 p.c. of 1946 usage. In addition, ex-quota allocations were freely made to essential industries to the extent of reasonable requirements. With further improvement in supply all domestic allocations of tin were discontinued in the second quarter of 1948.

In view of the shortage of tin and steel plate for the manufacture of cans, restrictions designed to provide for the most essential needs for metal containers were continued substantially unchanged through 1947. These regulations limited the use of metal containers to the packing of specified products in designated sizes and in some cases subject to quotas. In addition, under a priority system governing the manufacture and delivery of containers, preference had to be given to requirements for the packing of staples such as perishable fruits and vegetables, fish and meat products as well as special products including certain chemicals, drugs and medicinals. Some slight modification of the restrictions was made on Apr. 1, when annual quota pack limitations were lifted on a number of products. On Sept. 15, 1947, quotas were withdrawn on packs of several commodities and a few food items were added to the list of products which could be packed in metal containers. Finally, in May, 1948, the Metal Containers Order was revoked entirely.

Other Controls.—In 1947 the long drawn out shortage of textiles was at length overcome and supplies in most lines became quite satisfactory. In part the improvement reflected increased domestic production of woollens, rayons and cottons and in part it was the result of a larger volume of imports, particularly of cotton goods from the United States. The few remaining supply and distribution controls carrying over into 1947 were wound up. In the textile field one of the major control features was the program of production directives, employed as a means of obtaining the largest practicable output of essential garments. Only a small remnant of this program was carried over into 1947 and by mid-year all such controls had been dropped.

The various controls employed to regulate the distribution of pulp and paper products were gradually terminated during 1947. Most packing and wrapping materials were produced in greater quantities in 1947 but with continued heavy demand careful utilization of supplies remained necessary in the early part of the year. The distribution of shipping cases was under a priority system which gave preference in delivery to orders for essential uses such as the packaging of foods and building materials. These controls were withdrawn in July however, and in the same month regulations affecting the distribution of multi-wall bags were discontinued. One of the last controls to be terminated was that on the distribution of wood-pulp. To protect essential Canadian requirements in spite of the high prices prevailing in the export market, allocation of wood-pulp to the domestic market was continued until Dec. 31, 1947.

Section 2.—Trade Standards*

The Standards Division of the Department of Trade and Commerce was created in the latter part of the fiscal year 1946-47, and provided for the consolidation of several important services and for the administration, under one director, of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act, and the Weights and Measures

*Prepared under the direction of A. F. Gill, Director of Standards, Department of Trade and Commerce, by J. L. Stiver, Assistant Director.

Act. Certain functions in the field of commodity standards were also transferred to this Division from the Dominion Trade and Industry Commission, thereby furnishing a framework for the development of commodity standards and the use of the "Canada Standard" trade mark.

Subsection 1.—Commodity Standards

The Dominion Trade and Industry Commission Act of 1935 (c. 59) authorizes the use of the trade mark "Canada Standard" which may be applied on a voluntary basis by manufacturers or dealers, as a guarantee of the fulfilment by any product of a designated standard or specification. The administration of that trade mark is the responsibility of the Standards Division, which is also responsible for recommendations which, when approved by the Governor in Council, may be given the status of regulations applicable to the quality and labelling of merchandise. One such regulation of interest applies to the labelling of fur garments, and has established itself as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (c. 26), commodities composed of gold, silver or platinum as well as gold-plated, silver-plated, or platinum-plated wares, whether imported or of domestic manufacture, must be marked. The Act permits the manufacturer to stamp the marks of quality on the articles without immediate Government supervision. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

Subsection 2.—Weights and Measures

The Weights and Measures Act prescribes the legal standards of weight and measure for use in Canada. Responsibilities under the Act require control of the type of all weighing and measuring devices used for commercial purposes, their periodic verification and surveillance directed towards the elimination of sales by short-weight or short-measure.

The number of inspections made in the fiscal year 1946-47 was 717,864, compared with 660,109 in 1945-46. The more important of these comprised the following: weighing machines, including scales of all kinds, 227,041; measuring machines for liquids, 59,507; other weights, 130,651; other measures, 300,665.

Total expenditures were \$454,702 in 1946-47 compared with \$425,930 in 1945-46. Total revenues were \$453,482 and \$414,522, respectively, for the two years.

Subsection 3.—Electricity and Gas Inspection

Responsibilities of the Standards Division under the Electricity Inspection Act and the Gas Inspection Act comprise the control of the types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. For the administration of these two Acts, Canada is divided into three divisions and twenty districts, and the total staff is 122. During the year ended Mar. 31, 1947, 628,148 electricity and gas meters were tested as compared with 534,192 in the preceding year. Revenue derived from the testing amounted to \$431,467 and expenditures to \$333,998.

1.—Electricity and Gas Meters in Use, Years Ended Mar. 31, 1938-47

Year	Electricity Meters	Gas Meters				
		Manu- factured	Natural	Acetylene	Petroleum Gas	Total
	No.	No.	No.	No.	No.	No.
1938.....	1,905,692	510,261	174,355	3	1,268	685,887
1939.....	1,964,729	512,373	179,988	3	1,224	693,588
1940.....	2,037,563	514,170	185,499	3	1,184	700,856
1941.....	2,109,437	519,095	192,097	4	1,157	712,353
1942.....	2,181,945	524,669	197,781	4	1,196	723,650
1943.....	2,228,716	532,160	197,585	4	1,278	731,027
1944.....	2,268,500	540,240	201,522	4	1,392	743,158
1945.....	2,348,150	552,411	208,046	4	1,529	761,990
1946.....	2,459,672	550,949	215,330	4	1,651	767,934
1947.....	2,647,040	560,046	225,952	4	1,725	787,727

The Electricity and Fluid Exportation Act came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1947, amounted to 2,388,624,624 kilowatt hours. There was also a small exportation of natural gas.

Section 3.—Combinations in Restraint of Trade*

Federal legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to restrain trade unduly, are illegal under laws including the Combines Investigation Act and Sect. 498 of the Criminal Code. These laws are designed to assist in achieving the widest desired use of the nation's economic resources by promoting reasonable competitive opportunities for the expansion of production, distribution and employment.

The first Federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was provided and further legislation was enacted in 1919 and 1923.

The Combines Investigation Act.—The Combines Investigation Act (R.S.C. 1927, c. 26, as amended in 1935, 1937 and 1946) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Organizations or commercial arrangements of this class which operate to the detriment of the public by enhancing prices, fixing common prices, restricting competition, limiting production or otherwise restraining or attempting to restrain trade, are defined in the Act as "combines". Participation in the formation or in the operation of a combine is an indictable offence, subject to penalties up to \$25,000 or two years' imprisonment. Investigations of alleged combines under the Act are conducted under the direction of the Combines Investigation Commissioner who reports to the Minister of Justice. The Act provides for publication of reports of such investigations and for prosecution when a combine is found to exist.

* Revised by F. A. McGregor, Commissioner, Combines Investigation Act, Department of Justice, Ottawa.

The maintenance of a competitive economy in Canada as a matter of public policy was reaffirmed by Parliament in amendments made to the Combines Investigation Act in 1946, whereby some of the recommendations made in the report "Canada and International Cartels" were given legislative form. Under amending legislation enacted in 1946, the Commission may receive and investigate complaints respecting practices alleged to be offences under Sect. 498 and 498A of the Criminal Code, which concern offences related to those covered by the Combines Investigation Act. The amending Act of 1946 also authorized the Exchequer Court to prevent by Court order certain uses of patents or trade marks in undue restraint of trade.

An alleged combine in the manufacture and sale of dental supplies was reported by the Commissioner in July, 1947, following investigation into the activities of the Canadian Dental Trade Association and the operations of its members. Eighteen member companies were indicted by a Grand Jury at Toronto, Ont., for offences under Sect. 498 of the Criminal Code, the indictment charging a conspiracy in undue restraint of trade. The trial began on Feb. 23, 1948, in the Supreme Court of Ontario before a judge sitting with a jury and ended on Mar. 18, 1948, when the presiding judge directed the jury to bring in a verdict of not guilty on the ground that the evidence submitted by the Crown had not been adequately authenticated. The Crown appealed from this verdict to the Ontario Court of Appeal.

Five bread-baking companies operating in Saskatchewan, Alberta and British Columbia and two bakers' associations in the latter two Provinces were named as parties to an alleged combine in a report submitted in November, 1948, by the special commissioner appointed under the Act to conduct the investigation.

An investigation into the manufacture and sale of optical goods resulted in a finding by the Commissioner in a report issued in April, 1948, that a combine existed among certain manufacturers and wholesalers of optical goods. The report disclosed that in 1939 a system of patent licensing had been instituted by the principal manufacturer under which minimum resale prices were established at each stage of distribution for all but a small proportion of the types of spectacles and their parts in popular demand. Other arrangements were entered into by the parties to the alleged combine to eliminate competition in other ways. Action initiated in 1943 in the Exchequer Court to impeach certain patents involved in the licensing system had not been completed by the end of 1947. One patent had expired and four had been held invalid. Judgment had been reserved in one case and in another the trial was not completed.

A number of other major investigations at varying stages of completion are in progress. Preliminary inquiries have been made into a variety of complaints received during the year and, in many cases, the matters were disposed of when it was found that further investigation was not warranted. In other instances the preliminary examination was followed by the abandonment of features of trade programs which, if put into effect, might have led to question under the Combines Investigation Act.

International Trade Organization*.—Preliminary conferences among members of the United Nations at London, New York and Geneva in 1946 and 1947 with a view to establishing an International Trade Organization led to the adoption of a charter at the World Conference on Trade and Employment at Havana in 1948. The Havana Charter, which was signed by the representatives

* See also reference to this Organization at pp. 860-861.

of 53 countries on Mar. 24, 1948, had its origin in proposals made by the United States in December, 1945, in the form of a draft charter which was taken as the basis of discussions by a Preparatory Committee which first met at London in October, 1946. The aims of the World Conference on Trade and Employment were to provide working rules acceptable to trading countries for the conduct of international trade so as to avoid inequality of treatment between countries, particularly through discriminatory practices, and in general to increase trade, promote employment and assist in the development of less advanced areas. Among the provisions of the Charter are those relating to restrictive business practices which have harmful effects on international trade. Members accepting the Charter would agree to co-operate with the International Trade Organization to prevent their commercial enterprises from engaging in business practices, through international cartels or other means, which have or are about to have harmful effects on the expansion of trade and interfere with the achievements of the Organization's objectives. This section of the Charter establishes the procedure whereby members may submit complaints of such practices and provides a means of investigation and of recommendation for remedial action. The Charter will be submitted to the respective governments for ratification and will come into force when it has been accepted by a majority. In the meantime an Interim Commission has been set up under the chairmanship of Mr. Dana Wilgress, who was head of the Canadian delegation at Havana.

Section 4.—Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act 1935 (25-26 Geo. V., 1935, c. 32, as amended by 11 Geo. VI, 1947, c. 23), and applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1942-47

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 8,500 for the past ten years. Of the 6,590 patents granted in 1947, 5,060 or 77 p.c. were from inventors resident in the United States, 520 from Canadian residents, 727 from residents of the United Kingdom and other British Dominions, Colonies and Protectorates, while residents of Switzerland applied for 79, of France for 58, of the Netherlands for 48, of Sweden for 40, of Germany for 24 and of other countries for 34.

The year ended Mar. 31, 1947, showed a marked increase over previous years in many classes of invention. Applications in the fields of chemistry and electricity were most numerous. In the former there was great activity in artificial resins and

* The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Ottawa.

plastics and there were many inventions related to the synthesis of dyes, perfumes and textiles. The distillation of mineral oils and the improvement of lubricants also attracted much attention, as did the production of insecticides and plant-growth regulating compounds, and the improvement of therapeutic substances, especially penicillin. In the electricity field there were numerous applications for air-blast blow-out types of circuit breakers, electric welding methods and radio devices.

Invention for war purposes attracted little attention except for aeroplane structure and variable pitch propellers. There were numerous applications for jet propulsion engines and subsidiary mechanism.

Wooden and metallic prefabricated houses and materials, automatic and hydraulic control of machine tools and tractor-operated means of controlling farm implements were further exploited and there was a considerable increase in applications in the fields of photography, geometrical instruments, testing machine and gauge inventions. Many office and household appliances were also applied for.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by R.S.C., 1927, c. 32, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in R.S.C., 1927, c. 32) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Trade Marks and Design Act (R.S.C., 1927, c. 201) and amendments, and the Timber Marking Act (R.S.C., 1927, c. 198) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the *Patent Office Record*.

3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1942-47

Trade Marks and Shop Cards.—The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the *Patent Office Record* which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

Section 5.—Bounties, Subsidies and Subventions

In 1930 the Federal Parliament passed legislation entitled "An Act to Place Canadian Coal Used in the Manufacture of Iron or Steel on a Basis of Equality with Imported Coal" (20-21 Geo. V, c. 6). In implementation of this Act bounties paid in the calendar year 1947 amounted to \$287,414 on a tonnage of 580,634.

The Domestic Fuel Act 1927 (17 Geo. V, c. 52) was passed to encourage the production of domestic fuel from coal mined in Canada. Under its provisions arrangements were made for annual payments to manufacturers of coke who used Canadian mined coal to the extent of 70 p.c. of the total used. In the administration of this Act \$41,735 was paid in subsidies on 45,060 tons in the calendar year 1947.

Subventions were paid on movements of coal under assisted rates as provided by Parliament as follows:—

Province	Tons	Amount
		\$
Nova Scotia.....	296,599	141,156
New Brunswick.....	2,528	1,698
Saskatchewan.....	12,559	11,923

British Columbia export and bunkers.....	9,294	6,971
TOTALS.....	573,056	693,887

Section 6.—Control and Sale of Alcoholic Beverages*

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

During the war years, restrictions were placed on the manufacture, advertisement, importation and sale of alcoholic beverages. They are outlined at p. 586 of the 1946 Year Book.

The distilled liquor industry produces not only beverage spirits, but also industrial alcohol as (1) unmatured, denatured by distillers, used in anti-freeze and numerous other items, and (2) unmatured, non-denatured, used in chemical compounds, pharmaceutical preparations, and vinegar. Production of denatured alcohol was 8,093,259 proof gal. in 1947, an increase of some 2,581,391 proof gal. over 1946. Non-denatured industrial alcohol reached an abnormal production of 17,824,944 proof gal. in 1944, due to war needs, but by 1946 production had declined to 3,362,668 proof gal., and 3,211,317 proof gal. in 1947.

Beverage spirits produced and placed in bond for maturing totalled 16,344,309 proof gal. in 1946, with 16,853,384 proof gal. in 1947, an evident increase of about 2,940,000 proof gal. in all new spirits produced being accounted for by the rise in denatured industrial alcohol production.

Materials used showed important changes. Wheat is normally the major item, but in 1947, due to restrictions resulting from world food problems, consumption declined to only 27,325,210 lb. from a peak of 402,535,232 lb. in 1944. Corn replaced wheat, increasing from 15,833,741 lb. in 1944 and 45,191,740 lb. in 1945 to 220,533,419 lb. in 1947. Wheat flour (alcomeal), introduced during the war and consumed to the extent of 77,268,410 lb. in 1944, ceased to be of importance.

Net Revenue from Liquor Control.—The provincial figures of net revenue shown in Table 5, include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., sometimes paid direct to Provincial Governments. The Federal Government, for the year ended Mar. 31, 1947, also collected in excise duties, customs duties, excise taxes, licence fees, etc., \$78,377,155 on spirits; \$51,825,575 on malt and malt products and \$3,310,378 on wines.† Corresponding collections for the year ended Mar. 31, 1948, were: \$84,944,648 on spirits; \$57,534,701 on malt and malt products and \$2,921,811 on wines.

* Abridged from the report "The Control and Sale of Alcoholic Beverages in Canada", Dominion Bureau of Statistics, Price 50 cents. This report gives an outline of Dominion and provincial legislation concerning the control and sale of alcoholic beverages.

† These figures do not include sales tax, details of which are not available for separate commodities.

5.—Total Net Revenue Received by the Provincial Governments from Liquor Control, by Provinces, 1940-47

NOTE.—These figures are for provincial fiscal years ended on the following dates: N.S., Nov. 30; N.B., Oct. 31; Que., Apr. 30; Ont., Mar. 31; Man., Apr. 30; Sask., Mar. 31; Alta., Mar. 31; and B.C., Mar. 31.

Apparent Consumption of Alcoholic Beverages.—Accurate measurement of the consumption of alcoholic beverages by Canadians is practically impossible. Temporary additions to the resident population through tourist travel are, at certain seasons, extremely large. In 1948, for example, more than 22,000,000 visitors crossed the international boundary into Canada. Sales of alcoholic beverages to certain of these visitors undoubtedly reached considerable proportions. Precise measurement is impossible since no separate record is kept of sales to non-residents of Canada.

In Tables 6, 7 and 8 an attempt is made to indicate the apparent consumption in Canada of spirits, beer and wine, respectively, on the basis of the quantities produced, imported, exported, etc. It should be noted that these figures take no account of increases or decreases in the quantities held in stock by the Boards or by licensees. For instance, the Boards may, in certain years, buy heavily to replenish stocks or create reserves; such purchases would unduly weight the consumption figures for those years.

Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown in Table 6 as entered for consumption are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada.

Only a small part of the output of beer is placed in warehouses. The available supply, as shown in Table 7, is therefore made up of (1) production; (2) changes in warehouse stock; and (3) imports.

The apparent consumption of native wines as shown in Table 8 is obtainable by dividing the rates of excise tax into the total tax collections.

6.—Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1939-48

NOTE.—Figures for the years 1924-38 are given at p. 532 of the 1941 Year Book.

Year	Entered for Consumption	Add Exports in Bond	Add Imports	Deduct Re-Exports of Imported Spirits	Deduct Total Domestic Exports	Apparent Consumption

1948.....	4,632,506	1	2,691,302	3,420	1	7,320,388

¹ The large quantities of non-potable alcohol produced and exported for war uses in the years 1943-45 necessitated a change in the method of estimating the consumption of beverage spirits. The exports in bond and the domestic exports do not now enter into the calculations. Details of the change are given in the Bureau of Statistics report "The Control and Sale of Alcoholic Beverages in Canada".

7.—Apparent Consumption of Beer, Years Ended Mar. 31, 1939-48

PART III.—COMMERCIAL FAILURES

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was passed by the Federal Parliament in 1869, and applied to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874. In 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Federal legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun and Co., and the Bradstreet Co. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 856-857.)

The three Sections of this Part, although closely related so far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information, and it is not to be expected that their figures would be compiled on the same basis as those of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. These statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand the statistics do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, the totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Incorporated, were the only source of figures of commercial failures and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Incorporated, have ceased to publish statistics of assets since 1940.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Federal legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added about the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not made uniformly. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 1 and 2.

Section 1.—Industrial and Commercial Failures from Private Sources

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies and agents of various kinds, were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The figures in Table 1, which are available back to 1934, are therefore not comparable with the earlier series and are for Canada only.

1.—Industrial and Commercial Failures in Canada, by Classes, 1939-46, and by Provinces, 1947

(From Dun and Bradstreet, Incorporated)

NOTE.—Figures for 1934-38 are given at p. 628 of the 1946 Year Book.

In 1947, Quebec and Ontario accounted for 66 p.c. and 19 p.c., respectively, of the total failures in the Dominion. As regards liabilities, Quebec accounted for 65 p.c. of the total as compared with 22 p.c. registered for Ontario.

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years 1939-45 showed a steady decrease year by year, and, whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group also showed a steady decrease during those years. Since the end of the War, however, the numbers of failures have shown substantial increases amounting to 37 p.c. in 1946 over 1945 and to 134 p.c. in 1947 over 1946. Each industrial group contributed to the advance in 1947, though almost half of the increase was accounted for by manufacturing industries.

2.—Industrial and Commercial Failures, by Divisions of Industry, 1945-47

Section 2.—Commercial Failures as Compiled by the Dominion Bureau of Statistics

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213), certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability of the figures for 1921 and 1922, the two earliest full years for which statistics were compiled. The series, therefore, begins with 1923, except for the analysis by branches of business, in which case 1924 was the first year in which statistics were compiled. The statistics of this Section cover all bankruptcies and insolvencies that fall under Federal legislation, including assignments of individuals and farmers.

Section 3.—Administration of Bankrupt Estates

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.

7.—Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt Estates Closed, 1937-46, and by Provinces, 1947

(From the Annual Report of the Superintendent of Bankruptcy)

NOTE.—Figures for the years 1933-36 are given at p. 846 of the 1947 Year Book.

¹ In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately \$2,596,068 in 1942, \$1,799,722 in 1943, \$1,201,289 in 1944, \$1,811,803 in 1945, \$684,039 in 1946 and \$582,811 in 1947.

² Exclusive of city shown separately.

The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. This Act was amended in 1935 and 1938 and was repealed and replaced by the Farmers' Creditors Arrangement Act, 1943. Assignments are made only in those cases in which the farmers are hopelessly insolvent and, in many cases, the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 8 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act.

8.—Assets, Liabilities, Assets Realized and Costs of Administration in Estates Closed by Assignments or Receiving Orders Under the Farmers' Creditors Arrangement Act, 1938-46, and by Provinces, 1947.

(From the Annual Report of the Superintendent of Bankruptcy)

NOTE.—Figures for the years 1935-37 are given at p. 847 of the 1947 Year Book.

The subject of foreign trade covers more than treatment of imports and exports of commodities, important though this is. In its broader sense, it is made up of the total international exchanges of goods, services, securities and other financial exchanges all of which are presented in their proper relationship in the three Parts into which this Chapter is divided. Part I deals with Government Control of Trade so far as these controls have remained since the War of 1939-45 and the various ways in which the permanent Departments promote and encourage trade relationships. Part II is concerned with detailed statistics of external commodity trade. Part III summarizes external transactions from a standpoint of the balance of international payments.

General Review*

Foreign trade, of great significance to this country from the time of early settlement, has now developed to the point where Canada, with less than one per cent of the world's population, ranks near the top among the trading nations of the world. The Dominion has reached this position as the result of the adjustment and expansion of Canadian production to meet the enormous demands for food and reconstruction materials in devastated countries following the Second World War and to satisfy the greater requirements of the United States market. In addition, Canada's own import requirements reflected the high levels of employment and income, deferred demands, and the reconversion and development of industry. Thus, despite the disappearance of the huge contracts for munitions and other war supplies, total domestic exports for 1947 amounted to \$2,775,000,000 and imports for consumption to \$2,574,000,000, or a total of \$5,349,000,000. This meant in effect, that external commerce in 1947 amounted to \$425 per capita, compared with \$248 for the United Kingdom and \$142 for the United States.

* Prepared, except as indicated, by E. P. Weekes, Ph.D., Economic Research Branch, Department of Reconstruction and Supply.

Canada, with a small population in relation to vast natural resources, has found it profitable to specialize in the production of goods for export and in this way to obtain the means of payment for the heavy importation of commodities, the domestic supplies of which are lacking or insufficient for the country's high standard of living. Large investments on plant and equipment have been combined with Canadian skills and natural resources to produce² a relatively small number of more or less basic commodities on a scale very much larger than domestic markets can absorb even at the low costs thereby achieved. Despite the increasing production of highly manufactured goods, the bulk of exports still consists of agricultural commodities, wood and paper products and non-ferrous metals.

A highly mechanized agricultural industry, operating under favourable natural conditions, has enabled the low cost production and export of large quantities of agricultural products—especially wheat. Similarly, heavy investments in hydro-electric power, plant and equipment for the pulp, paper and non-ferrous metal industries have contributed to Canada's competitive position in the export of these products. These large outlays on fixed capital equipment are profitable only when there is a high degree of utilization of the plant concerned, because the industries involved are vulnerable to a decline in world demand.

Canada lacks various commodities required by modern industry and the import statistics reveal many such items that are not being produced domestically or, due to geographical and other factors, are not produced in sufficient quantities. Certain specialized types of machinery, cotton, coal, petroleum and wool are the more important of industrial imports; commodities more directly important to the consumer, include large quantities of sugar, certain fruits, fresh vegetables in winter, cocoa, tea, and coffee from warmer climates.

Since Confederation, the bulk of Canadian trade has been with the United States and the United Kingdom. Prior to the War of 1939-45, Canadian exports to the United Kingdom were, normally, twice the value of imports from that country. Under the conditions of currency convertibility prevailing before the War, the surplus on United Kingdom account more than financed the deficit on United States account.

Canadian trade grew rapidly during the Second World War and, although the type of goods exchanged has since been altered, the over-all value of trade in 1947 just exceeded that of 1944—formerly the peak trading year. This increase in trade has been due to such factors as the greatly increased levels of employment and income in the Western Hemisphere, and the need for the relief, rehabilitation and reconstruction of war-devastated countries advanced partly through the medium of UNRRA and the extension of loans and credits by the United States and Canada. Post-war loans and credits made by Canada total approximately \$2,000,000,000 including a \$154,000,000 contribution through UNRRA. These loans and credits to the United Kingdom and other countries are shown on p. 860 with the net amounts drawn in the years 1945, 1946 and 1947 and the amounts remaining to be drawn at Dec. 31, 1947.

I.—POST-WAR LOANS AND ADVANCES TO OTHER COUNTRIES BY THE CANADIAN GOVERNMENT

Country	Export Credit Loans Authorized	Net Amounts Drawn ¹			Amounts Not Drawn by Dec. 31, 1947
		1945	1946	1947

TOTALS—FOREIGN COUNTRIES.....	594.5	104.6	209.7	140.0	146.9
B. LOAN TO UNITED KINGDOM.....	1,250.0	—	540.0	423.0	287.0

¹ Net amounts drawn include interim advances as well as drawings on Export Credit loans less repayments of interim advances and loans. All advances had been repaid by Dec. 31, 1947, with the exception of \$8.8 million to the Union of Soviet Socialist Republics.

In this general setting, the Canadian surplus on commodity trade with the United Kingdom in 1947 was \$564,000,000, whereas, the average surplus in the 1935 to 1939 period was \$231,000,000. On the other hand, the deficit on commodity trade with the United States, in 1947, was \$918,000,000 or over eleven times as great as the 1935 to 1939 average deficit. Thus, although Canada had a slightly favourable balance on over-all trade in 1947, receipts of United States dollars fell far short of dollar expenditures, and Canadian reserves of gold and United States dollars declined from \$1,245,000,000 at Dec. 31, 1946, to about \$500,000,000 a year later.

This deterioration in the exchange position necessitated the introduction of a dollar saving and earning program on Nov. 17, 1947. Under this program, the importation of some luxury goods was prohibited; quotas were established on many other commodities; a 25 p.c. excise tax was placed on several consumer durables in order to reduce domestic demand; funds to be made available to individuals for pleasure travel in dollar countries were restricted; controls on the import of capital goods were instituted to encourage the expansion of export industries; and support was given to the gold-mining industry.

The operation of the Economic Co-operation Administration, established by the United States in April, 1948, by providing large sums of United States dollars for purchases in Canada, will likely maintain exports at higher levels than would otherwise have been possible. The reconstruction of Western Europe is of vital interest to Canada, and Canadian supplies under E.C.A. will do much to hasten the recovery of these traditional consumers and the restoration of multilateral trade.

In addition to the E.C.A. there have been two major trade conferences, the results of which, with the rehabilitation of Western Europe and other areas, may be of considerable long-run importance to Canadian trade. The General Agreements on Tariffs and Trade, signed by Canada and 22 other countries at Geneva on Oct. 30, 1947 (see pp. 873-877), provides for lowering tariffs on many items important in world trade. The United Nations Conference on Trade and Employment held at Havana, Cuba, from Nov. 21, 1947 to Mar. 24, 1948, drew up the

Havana Charter for the International Trade Organization. An Interim Commission was established to function until the Charter was ratified. Canada and the other fifty-three signatories undertook to co-operate with one another in the fields of trade and employment, and with the United Nations for the general purposes of attaining higher standards of living, full employment and conditions of economic and social progress and development. The participating countries pledged themselves to the many detailed clauses in the Agreements which outline proper practices in matters of trade and employment policy. This Charter marks a great step forward in providing the basis for the furtherance of international trade which is so important to the stabilization of high levels of income and employment in Canada.

Detailed Canadian trade figures for 1947 and earlier years are summarized in tables, and written analyses on pp. 895-932. This review has been largely in terms of commodity trade. Although this is by far the most important part of the broader field of international exchanges, the relationships between commodity trade and other items, such as services, tourists, etc., can be appreciated further by reference to Part III pp. 932-944.

Canada's Relation to World Trade.*—In the present world economic situation the fact looms large that some countries, which before the Second World War were important producers of either manufactured goods or primary products, have suffered a severe deterioration of their production capacity; a few have greatly improved their capacity and are now almost the sole sources of the imports needed for the reconstruction of war-devastated countries.

The producing countries, which include Canada, are unable to meet the requirements of importing countries although their industrial and domestic production is above that of pre-war output, partly because of the magnitude of the demands and partly because of the limited and unevenly distributed supply of hard currencies in which most of these imports have to be paid.

This shift in the distribution of productive facilities has contributed to considerable inflationary pressures in the world and these, in turn, have tended to complicate the problems. While the index of the world trade situation is the level of total net exports for all countries it must be noted that to the extent that net exports from any one country release materials, the short supply of which hampers reconstruction at home, the problem of meeting the international short position is, in the long run, actually delayed.

In Canada, as everywhere, reconversion was checked by shortages arising from labour disputes and the lack of imports, bottle-necks in transport, power and building materials and the unequal incidence of price controls. These, however, were being speedily reduced by 1946 and 1947, when controls on hundreds of commodities, including many essential raw materials, wage restrictions, etc., had been reduced or dropped. The success of these measures was closely linked with similar policies pursued elsewhere, particularly in the United States and the United Kingdom which countries have a very influential bearing on Canadian trade.

The aggregate value of world exports in 1938 was about \$22,600,000,000. In the first half of 1947, world exports, including UNRRA deliveries and certain other exports of a non-commercial nature, were proceeding at an annual rate of some \$22,400,000,000 if computed at 1938 prices and \$45,000,000,000 at current prices. World imports represented somewhat higher figures owing to the inclusion in the values recorded by most countries of transport costs up to the domestic

* Material prepared from the United Nations Economic Report.

frontier. Compared with 1938, however, the discrepancy between recorded world imports and recorded world exports has declined owing to the omission by most countries from their recorded imports of UNRRA deliveries and certain other government purchases. Recorded world imports in the year 1938 amounted to \$25,000,000,000 and in the first and second halves of 1946 and the first half of 1947 to \$14,700,000,000, \$19,300,000,000 and \$22,900,000,000, respectively. While the dollar value thus almost doubled during the period considered, the "quantum" of trade was practically the same as in 1938.

Comparison among national trade values is clouded by the fact that certain countries do not publish up-to-date information concerning their external trade and by the difficulty, under existing conditions of largely inconvertible exchanges, of turning values expressed in different currencies into a common measurement without bias.

II.—VALUE, PRICE AND QUANTUM OF WORLD EXPORTS, 1938-47

Item	1938	1946	1946	1947
	Semi-Annual Average	Semi-Annual Average	Second Half	First Half
	<i>Millions U.S. Dollars</i>			
VALUE OF WORLD EXPORTS OF MERCHANDISE—				
At 1938 prices.....	11,300	8,000	10,000	11,200
At current prices.....	11,300	14,700	18,500	22,500
	(1938=100)			
INDEXES OF WORLD EXPORTS—				
Quantum ¹	100	78	88	99
Dollar price.....	100	167	185	201
Dollar value.....	100	130	164	199

¹ A "quantum" index reflects the changes in the value of the goods actually imported or exported, computed at the prices obtained in the base year 1938.

Only in a few countries have exports risen more than imports. This is true for instance, of the United Kingdom which has been meeting the heavy pressure on its balance of payments by a considerable reduction in imports and a rise in exports to a level exceeding that of 1938. The most striking increase in exports, however, is that recorded by the United States. In 1938, the United States exports already exceeded those of any other country and represented 14 p.c. of the value of all goods entering into world trade; during the first half of 1947, after having risen five times in dollar value, they represented one-third of world exports. United States imports, on the other hand, stood only one-third above their quantum in 1938 which, incidentally, was abnormally low as a result of the heavy impact of the business recession of that year upon the United States.

The effect of the divergent trade movements upon the balance of merchandise trade, computed in dollars at official rates of exchange, is shown in the following Statement for a number of trading countries grouped into "surplus", "devastated", and "under-developed" countries.

To a certain extent, the distribution of the countries considered among these three groups is arbitrary. Thus, several of the "surplus" countries have recently had a deficit in their current foreign transactions. Also, it may be questioned whether Denmark is a "devastated" country. Certain countries are both "devastated" and "under-developed"; this is true of China.

¹ Within each of the three groups shown, the countries are arranged in the order of the total value of their imports and exports in 1938. The comparability of the figures for post-war years is affected by varying national practices in the reporting of UNRRA goods and, in general, government purchases and sales. The balances are computed as the difference between recorded imports and exports. Attention should be paid to the fact that in the case of countries recording imports f.o.b. (the United States, Canada, the Union of South Africa, Venezuela, and Mexico) the balance appears more "favourable" (that is, the export balance is larger, or the import balance smaller) than in the case of countries which record imports on a c.i.f. basis.

² Not available.

³ Excluding trade between Manchuria and the rest of China.

⁴ Average of July and August.

PART I.—THE GOVERNMENT AND FOREIGN TRADE*

Section 1.—Foreign Trade Service and Associated Agencies Concerned with the Development of Foreign Trade

Foreign trade contributes substantially to the welfare and prosperity of Canadians, due largely to the fact that the productive capacity of Canada is greater than the ability of her population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the national economy. It is appreciated, however, that two-way trade should be encouraged, in order that goods and services may be accepted in partial payment

* Sections 1 and 2 of this Part, together with the General Review at pp. 858-863, have been prepared in the several Branches concerned and collated by B. C. Butler, Director, Trade Publicity Division, Department of Trade and Commerce, Ottawa.

for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad, some being required for Canadian industrial processes. Others may be classed as consumer goods, necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of Government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without intervention on the part of government representatives.

Subsection 1.—Foreign Trade Service

The Foreign Trade Service and a number of associated agencies are at the disposal of exporters and importers, engaged directly in the development of Canada's commercial relations with other countries. The Foreign Trade Service consists of six divisions, the directors of which constitute an executive committee, with the Deputy Minister of Trade and Commerce as Chairman. The directors, with the managing directors and general managers of the associated agencies, are also responsible to the Minister of Trade and Commerce.

The six Divisions and their respective functions are described as follows:

Trade Commissioner Service	Import Division
Commercial Relations and Foreign Tariffs Division	Industrial Development Division
Export Division	Trade Publicity Division

Trade Commissioner Service.—The Trade Commissioner Service might be defined as the sales department of the Foreign Trade Service. Consisting of a headquarters at Ottawa and 42 offices in 38 Commonwealth and other countries, the organization seeks to place Canada in as many world markets as possible. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four global areas headed by area chiefs. The area officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Division for the presentation of official information on all trade matters in their respective territories.

Trade Commissioners, representing Canada in the 42 offices abroad, bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products, report on the exact kind of goods required, competitive conditions, trade regulations, tariffs, shipping and packaging regulations. Inquiries for Canadian goods are passed to Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners seek sources of raw materials and other goods wanted in Canada, and give assistance to the foreign exporter who wishes to market his products in Canada.

In countries where Canada maintains a diplomatic mission, as well as a trade office, Trade Commissioners form an integral part of the mission and assume the titles of Commercial Counsellor or Commercial Secretary. In some foreign countries they also act as Consuls or Vice-Consuls, according to their status as Foreign Service Officers. To refresh their knowledge of the Canadian industrial picture as a whole, tours of Canadian industrial centres are arranged from time to time for Trade

Commissioners. Contacts with Canadian exporters and importers are made or re-established, and the Trade Commissioners are given an opportunity to pass on information regarding the trade conditions and potentialities of their territories directly to those most concerned.

Trade Commissioner Offices are located in the following countries: Argentina, Australia (Sydney and Melbourne), Belgian Congo, Belgium, Brazil (Rio de Janeiro and São Paulo), British West Indies (Jamaica and Trinidad), Chile, China, Colombia, Cuba, Egypt, France, Germany, Greece, Guatemala, Hong Kong, India, Ireland, Italy, Mexico, the Netherlands, Newfoundland, New Zealand, Norway, Pakistan, Peru, Portugal, Singapore, South Africa (Johannesburg and Cape Town), Sweden, Switzerland, United Kingdom (London, Liverpool and Glasgow), the United States (Washington, New York and Los Angeles), and Venezuela. Canadian representatives of the Department of Trade and Commerce are attached to the Canadian Military Mission in Germany and the Canadian Mission in Japan. There is also a regional office in Vancouver to assist exporters and importers in Western Canada.

Commercial Relations and Foreign Tariffs Division.—The Commercial Relations and Foreign Tariffs Division collects and makes available to Government agencies and exporters, data on trade agreements and trade relationships with other countries, tariffs, import and exchange regulations, quotas and embargoes. More generally, questions related to trade agreements and commercial policies of other countries are of concern to this Division. This involves minute investigation into all aspects of commercial policy and research into tariff and financial developments, as well as the preparation of data required for preliminary study and preparation of new trade agreements, trade agreement renewals and revisions.

The Foreign Tariffs Section of this Division supplies information to other Government Departments and to Canadian exporters on tariffs, quotas, embargoes, documentation and other technical factors in the import regulations of foreign countries. New foreign trade laws and tariff regulations are perused constantly and a record of up-to-date information is maintained and available upon request.

The Commercial Relations Section collects and records data required for prospective trade negotiations. Problems related to foreign tariffs and other trade obstructions are studied. The value of mutual concessions with trading countries is examined. The Section deals with representations made by Canadian exporters and initiates or advises regarding appropriate action. In carrying out these functions, it is often necessary for this Section to seek the assistance of specialists from other Government Departments in the various phases of export industry such as agriculture, forestry, mining, etc.

Export Division.—The Export Division of the Foreign Trade Service is the link between Canadian exporters and the Trade Commissioner Service in the promotion of export trade. The Division comprises 21 Commodity officers, organized into five major Sections, as follows: (a) Foods—live stock and products, fish and fish products, plants and products, and food allocations; (b) Machinery, Metals and Chemicals—iron and steel products, non-ferrous metals and non-metallic minerals, chemicals and products, machinery and industrial equipment, electrical machinery and equipment, and automotive equipment and vehicles; (c) Textiles, Leather, Rubber—textiles and apparel, leather, rubber, and products; (d) Wood and Paper—wood and products, and paper and products; (e) General Products—durable consumer goods, and miscellaneous products. The Commodity officers

serve in the dual capacity of keeping the Trade Commissioner Service abroad fully informed of supply conditions in Canada, and maintaining close liaison with actual and prospective Canadian exporters. In conjunction with the Trade Commissioner Service, they advise exporters as to trade inquiries, potential markets for their products, the selection of agents, and trade regulations and practices. They furnish the initial contact through the Foreign Trade Service at Ottawa with Canadian markets abroad.

The Export Division maintains a confidential Exporters' Directory, which lists Canadian export firms and details of their products. Copies of this Directory are in every Trade Commissioner's office and are used as a means of keeping foreign buyers in touch with Canadian manufacturers offering desired commodities.

As authorized by the Export and Import Permits Act, 11 Geo. VI, c. 17, Orders in Council made under the Act have retained a number of products under export permit control by reason of supply conditions in Canada and to implement an inter-governmental arrangement.

The commodities under control are subject to constant scrutiny with a view to removal from export control, but there are still a number of products, such as roostuffs, cotton textiles and steel products, which are scarce, the distribution of which requires close surveys, and as to which export control is necessary. While permits are required for these scarce materials, an effort is being made constantly to ease restrictions and give Canadian shippers as much freedom of choice of markets as possible within the limited quantity available for export. Certain commodities are subject to export quotas, which are prepared by the Commodity Officers in conjunction with other interested Departments. The applications for export permits are dealt with through the Export Permit Branch, which comes under the jurisdiction of the Export Division.

The Export Division services the United Kingdom token shipment scheme, under which limited quantities of manufactured articles, at present regarded by the United Kingdom authorities as non-essential, are licensed for import into the United Kingdom.

Import Division.—An Import Division of the Foreign Trade Service was established soon after the end of the Second World War. This accorded with recognition of the primary problem in foreign trade promotion, that exchange be made available to purchase exports, and of the relationship of Canada as a customer to the export sale of Canadian goods.

The Import Division is the link between Canadian importers and the Trade Commissioner Service and corresponds to the Export Division in its particular field. The Division maintains close contact with Canadian importers, and uses facilities of the Trade Commissioner Service to reduce the difficulties experienced by Canadian importers and foreign exporters. It extends to Canadian importers assistance that can be provided in the foreign field through the Trade Commissioner Service.

The Import Division maintains a directory of Canadian importers and foreign exporters, classified according to the field of their activities. This directory assists the Trade Commissioners in their respective territories, serving as a guide. It also maintains a Canadian Trade Services Directory, copies of which are supplied to Trade Commissioners. This contains condensed reference material concerning Canadian requirements on customs, invoicing, packaging, marketing of goods, available freight and forwarding facilities, steamship rates, rail transportation and

relative marketing data. The primary purpose of this service is to obtain recognition abroad for Canada as an organized market, and to provide a reference in dealing with requests for assistance received from importers and their foreign connections.

Commodity specialists in the Division assist importers by providing information concerning new sources of supply of foreign raw materials and food products, and reports on the remaining war-engendered obstacles or restrictions in foreign markets. They also investigate import requirements in general. A manufactured goods section is maintained to assist importers of component parts, industrial equipment and finished goods.

In conjunction with other administrative authorities, the Import Division is concerned with the fair allocation to Canada of products subject to international control and distribution. Through the Trade Commissioner Service, it undertakes negotiations with foreign governments which regulate the sale of their exportable surpluses in world markets, thereby protecting Canadian interests.

Industrial Development Division.—This Division has been established to co-ordinate Federal assistance in the establishment of new industries in Canada, both of domestic and foreign origin. Close liaison is maintained with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, the Canadian Manufacturers' Association and other promotional agencies, and with trade commissioners and other Canadian Government offices abroad. Numerous inquiries from foreign concerns and individuals regarding the manufacture of new products in Canada under licence or royalty, and the placing of inventions are also processed.

Programs for the training of foreign technicians in Canada are instituted and carried out by the Division. Seventy-five Chinese have been trained in Canadian industry during 1947 and 1948, and a similar program for East Indian trainees is in progress.

Working in collaboration with the Area Sections of the Canadian Trade Commissioner Service this Division plans itineraries for visiting delegations and industrial technicians, and on occasion sends an official to conduct the tour. Arrangements are also made for visiting foreign government officials, technicians, lecturers, scientists and students.

Also included in the duties of the Division are, membership in various inter-departmental committees concerned with industrial studies, design and development, the processing of reparation plants and equipment, and the admission of German scientists to Canada for the benefit of Canadian industry. The Division also provides liaison with the War Assets Corporation in the disposal of surplus equipment, particularly for export. Every effort is made to maintain close contact with new industries in the solution of their problems and the development of plans for export.

Trade Publicity Division.—The principal function of the Trade Publicity Division is to furnish the commercial community of Canada with information concerning the assistance obtainable by exporters and importers from the Foreign Trade Service. This Division is also responsible for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in this country.

Its principal educational and informative medium is *Foreign Trade*, the weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character despatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's external trade. The educational and promotional work of this Division is supported with advertising at home and abroad. The daily press, periodicals and trade papers, as well as films and radio, are also employed. Although the Trade Publicity Division is part of the Foreign Trade Service, its functions have been expanded to include assistance to the associated agencies of the Department of Trade and Commerce concerned with the development of foreign trade. For example, it handles publicity connected with the projects undertaken by the Canadian Government Exhibition Commission in this and other countries.

Subsection 2.—Canadian Commercial Corporation

The Canadian Commercial Corporation was established on May 1, 1946, by Act of Parliament to assist in the development of trade between Canada and other nations, and to assist persons in Canada to obtain goods and commodities from outside Canada, and to dispose of goods and commodities that are available for export from Canada.

By the terms of the Act, the Corporation took over the whole of the undertaking of the Canadian Export Board, which was established by Order in Council P.C. 70, of Jan. 31, 1944. This agency was at that time carrying out procurement functions in Canada on behalf of foreign governments, the United Nations Relief and Rehabilitation Administration, and the Canadian Mutual Aid Board. As a result, the Corporation continued without interruption all procurement action being taken on Apr. 30, 1946, by the Canadian Export Board, and has continued to render similar services to a number of foreign governments, particularly those to which Canada has extended loans. In addition, the Corporation has been able to give assistance to Canadians in the procurement of goods from other countries where, by reason of regulations in those countries, it was necessary that transactions should be handled in whole or in part through a Government agency.

By Order in Council P.C. 314, of Feb. 5, 1947, the power, duty and function vested in the Minister of Reconstruction and Supply to purchase or produce munitions of war or supplies, as well as to construct or carry out projects required by the Department of National Defence, was transferred to the Minister of Trade and Commerce. In connection with this transfer, the Minister of Trade and Commerce was authorized to make use of the services of the officers and servants of the Canadian Commercial Corporation. Under this authority, the officers and employees of the Canadian Commercial Corporation have, since Feb. 1, effected all procurement for the Department of National Defence, acting as agents for the Minister of Trade and Commerce.

By an Act to amend the Canadian Commercial Corporation Act, assented to July 17, 1947, the Corporation, as such, was empowered to act as agent, on behalf of the Minister of Trade and Commerce, in carrying out the powers, duties and functions transferred to him under Order in Council P.C. 314.

The Corporation, therefore, has three separate but related functions. It acts as procurement agency in Canada for foreign governments; it is available to assist Canadian importers; and, in effect, it acts as agent for the Minister of Trade and Commerce in procurement for the Department of National Defence.

Subsection 3.—Canadian Government Exhibition Commission

The Canadian Government Exhibition Commission provides the medium for publicizing Canada and selling her products abroad by graphic presentation. Under the terms of reference, the Commission is solely responsible for the construction and administration of all Government exhibits in International Expositions, Trade Fairs and displays outside of Canada, in which the Canadian Government may decide to participate, and of all International Expositions and Trade Fairs sponsored by the Canadian Government, which may be held in Canada. The Commission's first fulfilment of the latter half of this responsibility was the development of the Canadian International Trade Fair, held in Toronto from May 31 to June 12, 1948. Manufacturers and producers in Canada and other countries had an opportunity of displaying their products at this Fair.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays and, on request, is prepared to advise individual Canadian companies in the preparation of their exhibits.

Though not a producer of literature itself, the distribution of large quantities of materials produced by other Canadian Government Departments and agencies is effected by the Commission at its various presentations.

Subsection 4.—Wheat and Grain Division

The problems of Canada's grain trade and milling industry are handled by the Wheat and Grain Division, close liaison being maintained with the various organizations connected with the trade. The Division acts as a procurement agency in securing supplies of cereals and certain cereal products for the Supply Missions of various countries. The Director of the Division serves as the Secretary to the Wheat Committee of the Cabinet and as the departmental liaison officer to the Canadian Wheat Board. In addition, the Director represents Canada on the International Wheat Council.

Subsection 5.—Export Credits

For the general purpose of protecting and expanding Canadian foreign trade interests, the Export Credits Insurance Act was passed in 1944, and amended in December, 1945, and August, 1946. This Act is in two parts, Part I incorporating the Export Credits Insurance Corporation, and Part II providing for loans or guarantees to governments of other countries or their agencies. In May, 1946, Parliament gave its assent in the United Kingdom Financial Agreement Act to a financial agreement between Canada and the United Kingdom making available a large credit to the United Kingdom. (See also page 870.)

Export Credits Insurance Corporation.—Administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, the Export Credits Insurance Corporation insures exporters against credits losses involved in the export or an agreement for the export of goods. Policies are issued on a yearly basis, covering exporters' sales to all countries and protecting them against certain risks of loss involved in foreign trade. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country; and additional transport or insurance charges occasioned by interruption or diversion of voyage outside Canada or continental United States.

The insurance is available under two main classifications: (1) general commodities, (2) capital goods. Coverage for general commodities can be procured by exporters under two types of Policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium, and which covers the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters of such commodities as plant equipment, heavy machinery, etc., which are subject to extended credit for longer periods than is customary for general commodities. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters under all policies up to 85 p.c. of the contract price, or gross invoice value of shipments. This co-insurance plan also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportion of 85 p.c. and 15 p.c., respectively.

Loans to Britain and to Foreign Governments.—The United Kingdom Financial Agreement Act approved the financial agreement signed on Mar. 6, 1946, between the Government of Canada and the Government of the United Kingdom. Under this agreement the Government of Canada extended to the United Kingdom a credit of \$1,250,000,000 to facilitate purchases of goods and services in Canada and to assist the United Kingdom to meet transitional post-war deficits in its current balance of payments, to maintain adequate reserves of gold and dollars; and to assume the obligations of multilateral trade.

Part II of the Export Credits Insurance Act, 1944, as amended, enables the Governor in Council, on the recommendation of the Minister of Finance and the Minister of Trade and Commerce to authorize the Minister of Finance to enter into agreements with foreign governments or their agencies, at their request (a) to provide them with credits to enable them or any person ordinarily resident in such country to pay the cost of Canadian-produced goods or the cost of Canadian services, or (b) to purchase or guarantee securities issued by them for the purpose of making such payments, or (c) to guarantee obligations undertaken or guaranteed by such government or agency under contracts to purchase Canadian goods and services, if such action is deemed advisable for the purpose of facilitating and developing trade or any branch of trade between Canada and any other country.

The total Canadian post-war direct credits to the United Kingdom under the United Kingdom Financial Agreement Act and to other countries under Part II of The Export Credits Insurance Act are shown in Statement I, p. 860.

Subsection 6.—The Easing of Controls on Enemy Trading Regulations

Throughout the war years, this Subsection has dealt with the controls of trading with enemy countries that it was found necessary to impose. At pp. 866-867 of the 1947 Year Book the winding up of many of these controls was dealt with although, at that time, a few were still outstanding or had merely been modified in the light of the international situation then existing.

So far as enemy trading regulations are concerned, at the time of going to press of the current edition of the Year Book, an Order was issued in July, 1947, modifying the Order of June, 1946, regarding trade with Japan. The new Order was made subject to the same conditions as those for Austria, see p. 867 of the 1947 Year Book.

Generally speaking, regulations for trading with enemy countries are now at an end.

Section 2.—The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption of the present form of preferential tariff in 1904.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

Subsection 1.—The Canadian Tariff Structure

The Canadian Tariff consists mainly of three sets of rates, viz., Preferential, Intermediate, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to 33½ p.c. and, after 1904, took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second stage in the tariff edifice is the Intermediate rates. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-British countries, a special concession under the Intermediate rates may be granted and rates lower than the Intermediate apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Intermediate rates.

British Preferential rates apply to all countries within the Empire. They may, however, be modified downward in their application to specific countries when trade agreements are being revised or discussed between Canada and other Dominions. The whole tariff structure is a very complicated piece of administrative machinery. Almost every budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible at this place to attempt a discussion of tariff schedules. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as "home consumption" drawbacks; these apply mainly to imported materials used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus, the Minister of National Revenue or, through him, the customs officials have at times been empowered to establish a "fair market value" as a basis of applying duties to be collected. The term "fair market value" is vague and open to various interpretations and has been frequently criticized, but in exceptional cases, for which they are designed, such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under conditions such as these, to value imports from such countries at a "fair rate of exchange". Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application, and, while the powers of fixing "fair market value" and "fair rate of exchange" have been applied to meet extraordinary conditions in the past, these powers have lately been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board.—The Canadian Tariff Act was written in 1907 and, although there have been many changes and revisions, there has been no complete overhaul since that time. In 1931, a Tariff Board was established to make inquiry into and report on any matter in relation to goods that are subject to or exempt from customs or excise duties or on which the Minister of Finance desires information. The duties of this Board are more specifically described at pp. 965-966 of the 1941 Year Book. The Tariff Board has been inoperative since the beginning of the War in 1939, in view of the turn taken by wartime trade. Its officers and experts worked with various war bureaus and its earlier research is now unrelated to the wide changes that have been brought about in industry and trade as a result of the War. In the post-war formulation of Canadian trade and tariff policies, a change has been introduced by the setting up of a special Interdepartmental Committee. The Canadian Tariff Board has not been abolished. Indeed the Chairman of the Board is also head of the Interdepartmental Committee, but will resume its functions

along with the Committee. The Committee will hear representations from industrialists and businessmen. These arrangements should serve a useful purpose in providing valuable guidance to the Government in the formulation of trade policy.

Subsection 2.—Tariff Relations with Other Countries

The United Nations General Agreement on Tariffs and Trade—Geneva, 1947.*—Two years of preparation and study, including more than a year of international negotiations, culminated in a General Agreement on Tariffs and Trade authenticated at Geneva by 23 countries on Oct. 30, 1947. The complete text of this Agreement has been published by the United Nations.

The General Agreement on Tariffs and Trade, which includes twenty schedules of tariff concessions, was brought into force, provisionally, on Jan. 1, 1948, by the countries which have signed the Protocol of Provisional Application. This Protocol was signed before that date by Australia, Belgium, Canada, Cuba, France, Luxembourg, the Netherlands, United Kingdom and the United States. Czechoslovakia signed on Mar. 20, 1948, followed by China on Apr. 21, South Africa on May 14, India on June 9, Norway on June 10, Southern Rhodesia on June 11, Burma, Ceylon and Lebanon on June 29 and Brazil, New Zealand, Pakistan and Syria on June 30. Chile requested an extension of six months beyond the deadline of June 30, 1948, before bringing the Agreement into force.

The new rates of duty have not yet become effective for several colonial areas. The provisions of the General Agreement, applicable to dependent territories of the United Kingdom, have been suspended pending renegotiation. In addition, the date new rates applicable to the Malayan Union become effective has yet to be announced. The Netherlands Government has brought the new rates applicable to its colonies into force. At the time of going to press Belgium expected the rates applicable to its colonies to be put into effect in the near future. The French Government has not yet announced the date the General Agreement will be applied to its overseas territories, including French Equatorial Africa, French Somaliland, French Oceania, Guadeloupe, French Guiana, Indo-China, Madagascar, Martinique, New Caledonia, Reunion, St. Pierre and Miquelon and Tunisia.

Concurrent with the negotiation of the General Agreement on Tariffs and Trade the Preparatory Committee at Geneva formulated a Draft Charter which was further discussed at the World Trade Conference convened at Havana on Nov. 21, 1947. This Draft Charter formulated a code of international conduct in respect to commercial policy, commodity policy, restrictive business practices, employment, and development. Many of the provisions of the Draft Charter are incorporated in the General Agreement on Tariffs and Trade. The latter includes a provision entitled "Relation of this Agreement to the Charter for an International Trade Organization". Under this provision, the signatories to the General Agreement undertake that, "pending their acceptance of such a Charter in accordance with their constitutional procedures", they will "observe to the fullest extent of their executive authority the general principles of the Draft Charter submitted to the (Havana) Conference by the Preparatory Committee". It is further provided that, at such time when the Charter enters into force, Article I and Part II of the General Agreement shall be superseded by the corresponding provisions of the Charter. At the First Session of the Contracting Parties held at Havana following

* Prepared by A. L. Neal, Commercial Relations and Foreign Tariffs Division, Department of Trade and Commerce.

the World Trade Conference it was agreed to modify and amend certain of the Articles of the General Agreement. These changes were incorporated at that time into the Agreement. Any contracting party may on or after Jan. 1, 1951, withdraw from the General Agreement upon the expiration of six months' prior notification of such intention.

The General Agreement on Tariffs and Trade formulates principles and rules fundamental to the application and enforcement of what is, in effect, an international code. Those provisions, relative to commercial policy in the broadest sense of the phrase, deal with such matters as most-favoured-nation treatment, preferences, customs duties and other duties and charges, national treatment in connection with internal taxation and regulation, freedom of transit, anti-dumping and countervailing duties, valuation for customs purposes, formalities connected with importation and exportation of goods, marks of origin and the publication and administration of trade regulations.

Interlocking closely with the more standard provisions respecting commercial policy above referred to, are those relevant portions of the Draft Charter of the International Trade Organization on quantitative restrictions which have been embodied in the General Agreement. In principle, quantitative restrictions are prohibited. There are, however, certain exceptions to this basic rule which are carefully defined, the most important being those permitted in respect of countries involved in balance of payments difficulties. The provisions regarding non-discriminatory administration of quantitative restrictions and the exceptions to the rule of non-discrimination which are important features of the basic rules regarding the use of quantitative restrictions in any form, are carefully formulated and set forth in the General Agreement.

Other important Articles of the General Agreement relate to exchange arrangements, export subsidies, state-trading enterprises, adjustments in connection with economic development, emergency action on imports of particular products, general and security exceptions, consultation, nullification or impairment, joint action by the contracting parties, entry into force, withholding or withdrawing of concessions, modification of tariff schedules, etc.

Under the terms of the Protocol of Provisional Application, Canada and the other signatories thereto brought into force on Jan. 1, 1948, Parts I and III of the General Agreement—that is (1) those articles thereof which provide for most-favoured-nation treatment in administration of the general articles and the specified tariff concessions; (2) the schedules of tariff concessions and (3) the general articles relative to acceptance, entry into force and withdrawal. Also, on Jan. 1, 1948, the signatory countries brought, provisionally, into force Part II of the General Agreement (i.e.—all other provisions thereof) “to the fullest extent not inconsistent with existing legislation”.

Although more than one hundred separate and distinct agreements respecting tariffs and preferences were worked out at Geneva, the results of all these have been combined in Schedules I to XX, inclusive of the General Agreement. Schedule No. V, allotted to Canada, consolidates the concessions granted by Canada to all countries with which negotiations were concluded; therefore, the rates of customs duty set forth therein are generalized among the participating nations or countries. As was the case with many of the countries, parties to preferential tariff arrangements, the Canadian Schedule (No. V) is in two parts: Part I comprises all items of Canadian tariff negotiated with any or all countries with the rates applicable to

all "members of the club" not entitled to lower or special preferential rates; Part II comprises those tariff items which were the subject of negotiation with Commonwealth countries, and the rates applicable to those areas of the Commonwealth entitled to the benefits of the British Preferential Tariff. All items in Part II, bearing a preferential rate, also appear in Part I, bearing the rate applicable to those other countries which are parties to the Geneva negotiations. The rates of duty specified in Part I are designated as the duties under the "most-favoured-nation tariff" and apply, provisionally, to not only those countries which participated at Geneva but to all countries with which Canada has, in the past, exchanged most-favoured-nation treatment.

The term of the General Agreement is the standard one of three years (i.e.—Jan. 1, 1948, to Jan. 1, 1951) but the Agreement contains the usual provisions for continuance in force thereafter, subject to six months' notice of termination.

Study of the terms of the new Agreement and Schedules thereto, reveals that it is the most far-reaching and comprehensive agreement of its kind in Canadian history. The Canadian portion of the multilateral instrument is a vital part of what is probably the most comprehensive multilateral trade agreement ever attempted.

A revision has been concluded of the Canada-United Kingdom Trade Agreement of 1937. By an exchange of notes each country undertakes, with respect to goods covered by the relevant Schedules of the Multilateral Agreement (Schedules V and XIX), to continue to accord to the products of the other treatment no less favourable in general than was accorded under the Agreement of 1937, and recognizes the right of the other to reduce or eliminate preferences. This exchange of notes reflects the attitude that these preferences, freely given, are not matters of rigid contractual right or obligation.

Canadian Concessions to Other Countries.—The tariff treatment to be accorded by Canada to goods, the produce of the negotiating countries, is set forth in Canadian Schedule V the General Agreement on Tariff and Trade, in the multilateral instrument.

Schedule V (Parts I and II) consists of some 1,050 items or sub-items; of these, 590 provide for reductions in most-favoured-nation tariff below existing rates, and about 460 for the binding or consolidation of most-favoured-nation rates effective at present. The British Preferential rates are reduced directly in respect of some 100 items or sub-items, and indirectly in respect of some 50 items or sub-items (in cases where the new most-favoured-nation rates are lower than existing British Preferential rates). As compared with the tariff structure in force until Dec. 31, 1947, the adoption of the duties specified in the Schedule means, in the case of the Canadian Tariff, the elimination of preferences in 94 items or sub-items.

Schedule V provides for one increase in duty, viz.: in the preferential rate on tin-plate under tariff item 383 (b). This is accompanied by a reduction in the most-favoured-nation rate.

Part II of Schedule V relates solely to the British Preferential rates in the Canadian Tariff and segregates those items in which concessions were made in favour of various Commonwealth countries. Each reduction in the preferential rate necessitated a corresponding or compensatory reduction in the rate applicable to favoured nations since, under the provisions of the Charter and the General Agreement, no existing preferential margin could be increased and no new preference could be created.

Concessions Secured by Canada.—Concessions secured for Canadian products in the various countries with which negotiations were concluded cover an extremely wide range and will be of interest to all parts of the Dominion. The following is a summary of some of the principal export commodities of Canada on which concessions were gained.

Wheat.—Maximum reduction in the United States duty and substantial reductions in the customs duty and/or "monopoly charges" in France, Belgium, Luxembourg, and the Netherlands (Benelux), Cuba, and Norway, with binding of free entry or existing duty in China and Brazil.

Wheat Flour.—Maximum reduction in United States duty and reductions in duty and/or monopoly tax in the Benelux countries and Cuba, as well as reduction in duties in French colonial possessions.

Coarse Grains.—Maximum reductions in the United States duties on oats, barley, rye, bran, shorts, middlings, grain hulls, screenings and scalplings.

Cattle.—Binding of the United States rate of 1½ cts. per lb. on cattle weighing 700 lb. or more, each together with an enlargement of the quota from 225,000 head to 400,000 head; and binding of the rate of 1½ cts. per lb. on calves with an enlargement of the quota from 100,000 head to 200,000 head.

Seed Potatoes.—Continuance in United States of existing quota rate on certified seed potatoes with increase in quota from 1,500,000 bushels to 2,500,000 bushels.

Free entry for seed potatoes bound in Brazil and in Cuba on seasonal basis.

Turnips.—Maximum reduction in United States duty.

Seeds.—Maximum reductions in United States duties on alfalfa, red clover, alsike clover, sweet clover, and timothy, with reductions on other grass and forage seeds. Binding in Benelux of free entry for clover and forage crop seeds; reduction in Czechoslovakia on lucerne and grass seeds; and binding in France of free entry of clover and other forage seeds.

Apples.—Reduction in duties in United States on fresh apples and maximum reduction on dried and canned apples. Reductions by Benelux on fresh and dried apples; by France on fresh and dried apples and apple juice; and by Norway on fresh apples.

Berries.—Reductions in United States duties on blueberries, both frozen and canned, as well as on other frozen berries.

Dairy Products, Eggs, etc.—Maximum reduction in United States duties on live poultry of all kinds; on all dressed poultry other than turkeys; and on baby chicks, canned chicken and dead game birds.

Quota retained on fresh cream but quota rate reduced from 28.3 cts. per gal. to 20 cts. Quota retained on whole milk, but quota rate reduced from 3¼ cts. per gal. to 2 cts. Reductions in rates on skimmed milk and buttermilk, condensed milk (sweetened and unsweetened), whole milk dried, and skim milk and buttermilk, dried.

Cheese.—United States duty reduced on cheddar cheese.

Butter.—United States duty reduced from 14 cts. to 7 cts. per lb. on global quota of 50,000,000 lb.

Reductions in duties in France on concentrated milk, butter and cheese.

General Products.—Reductions in United States duties on maple syrup, maple sugar, honey, hay, straw, millet, dried peas, beef and veal, edible offal, lamb, mutton, wool, dried and frozen eggs, canned fruits, dried potatoes, potato starch, onions, various fresh vegetables, soups, juices and sauces, most vegetable seeds, tobacco, etc.

Spiritous Liquors.—Substantial reduction in United States duties on whisky and gin.

Cod Fillets.—Continuance in the United States of the existing quota and quota rate but with a binding of the ex-quota rate of 2½ cts. per lb. (not bound under the existing Agreement).

Other Fisheries Products.—Maximum reductions in United States duties on fresh or frozen salmon and halibut; reductions in duties on other fresh fish, on smoked or kippered herring, on pickled salmon, and on cod, dry or green salted, pickled, etc.

Binding by Benelux of free entry of fish, fresh or chilled, salted, smoked or dried; reduction by France on canned salmon and canned lobster; reduction by Brazil on dry salted codfish and by Cuba on dried codfish; reductions by Czechoslovakia on salted herrings and preserved salmon; by India on canned fish; and by Norway on canned lobster, canned salmon and salted salmon.

Lumber.—Maximum reductions in United States duty, as well as in Internal Revenue tax, on sawn and dressed boards, planks, etc., of fir, hemlock, spruce, pine and larch. Maximum reductions also in duties on red cedar plywood, veneers (other than of birch or maple, which are bound at 10 p.c.), and binding of free entry for wood-pulp, poles, ties, staves, etc.

Binding by Benelux of free entry for logs, pulpwood and wood-pulp and of low rates on veneer sheets and tongued and grooved wood; reductions in French duties on logs, pulpwood, veneer leaves, tongued and grooved wood, and wood-pulp; and by India on Douglas fir timber.

Base Metals.—Reduction by one-third of United States duty on aluminum metal and by 50 p.c. of the duties on aluminum plates, sheet, scrap, etc. Maximum reduction on magnesium, tantalum, cadmium, nickel in all forms except tubes and tubing, and zinc sheets, scrap and dross, together with binding of free entry and maximum reduction in Internal Revenue tax on all copper.

Binding by Benelux of free entry for lead and zinc ores; copper in pigs, ingots, etc.; nickel in ingots, plates, etc.; aluminum in ingots, plates, etc.; and zinc ingots.

Binding by France of free entry for important ores and reductions in duty on various forms of copper, nickel, aluminum and zinc and free entry for lead ingots.

Binding by Czechoslovakia and Norway of free entry for certain forms of copper, nickel, aluminum, and cadmium.

Non-Metallic Minerals.—Numerous reductions in various countries in duties on mica, talc, and corundum, with continuance of free entry of asbestos in United States, Benelux, and Czechoslovakia, and of free entry in United States of coal and coke, artificial abrasives (crude), calcium cyanide, gypsum, stone, and sand (including nepheline syenite).

Chemicals.—Maximum reductions in United States duties on acetic anhydride, vinyl acetate and synthetic resins, selenium dioxide and tellurium compounds, aluminum hydroxide, ammonium nitrate, calcium carbide, acetylene and other blacks, and salt, with reductions in duties on acetic acid and crude barytes.

Manufactured Goods.—Reductions in United States duties on electric stoves and many other appliances employing an electric element; aircraft and parts, pleasure craft, reciprocating locomotives, many articles and wares of metal, paint-brush handles, baby carriages, canoes and paddles, mop handles, skis, hockey sticks, toboggans, and equipment for exercise or play; pipe organs and parts, rubber substitutes and synthetic rubber. Continuance of free entry for agricultural implements.

Reductions or binding of free entry or low rates in one or several of Benelux, France, India, Norway, Brazil, Chile, China, Cuba, and Czechoslovakia on such goods as soaps, synthetic rubber, rubber belting, agricultural implements, lamps and lanterns, heating and cooking apparatus, insulators, ice skates, aircraft and parts, domestic refrigerators, rubber tires, sewing machines, electrodes and batteries, knitting-machine needles, bronze powder, and skis.

As regards the United States, it should be stated in general that the new Agreement preserves and continues for Canada practically all the advantages obtained in former trade agreements (including the binding of free entry of goods of the kinds which represented approximately two-thirds of all Canadian exports to the United States during 1939) and embodies new and often maximum concessions on a large proportion of the remainder.

Other Tariff Relations.—Apart from the trade agreements concluded at Geneva, Canada has numerous reciprocal tariff arrangements with both Commonwealth and foreign countries. These consist of: (1) application to Canada of some old commercial treaties of the United Kingdom; (2) participation in commercial treaties of the United Kingdom by Canadian Acts of Parliament or Orders in Council; (3) Canadian Conventions of Commerce or Trade Agreements; (4) Exchanges of Notes respecting reciprocal tariff concessions. Power also exists under the Canadian Tariff Act to extend, by Order in Council, British preferential rates, intermediate rates or other reduced duties as compensation for concessions received.

Commonwealth Countries.—Either by means of direct trade agreements with Commonwealth countries or by the powers conferred by the Canadian Tariff Act, Canada now accords the Preferential tariff, or lower rates, to almost the whole of

the Commonwealth. Amongst the Commonwealth countries, Canada has trade agreements with the United Kingdom, 1937, which also provides for the extension of the preferential system between Canada and British Colonies, Eire (1932), Australia (1931), New Zealand (1932), the Union of South Africa (1932) and British West Indies (1925). The agreement concluded between Canada and Southern Rhodesia in 1932 was terminated in 1938, but each country continues to grant tariff preferences to the other.

Many Canadian products are given tariff preferences when entering the United Kingdom, Australia, New Zealand, the British West Indies, Bermuda, British Guiana, British Honduras, Fiji, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, the Seychelles, British Somaliland, St. Helena, Western Samoa, the British Protectorate of Tonga, the British Solomon Islands, the Gilbert and Ellice Islands, Cyprus, the Channel Islands, the Isle of Man, Southern Rhodesia, Mauritius, Ceylon, and Malta. Preferences are granted to a considerable extent to Canadian goods in Eire and the Union of South Africa; also, on some goods, in the Malayan Union, British North Borneo, Sarawak, Brunei, and the Cayman Islands. Canadian motor-cars, together with those from other Commonwealth countries, enjoy preference in Hong Kong and the Straits Settlements; spirits, wines, malt liquors, and tobaccos in Gibraltar; and wines in the Falkland Islands. The preferential system within the British Commonwealth was modified to some extent in the General Agreement on Tariffs and Trade, some preferences being retained, some reduced, and some eliminated.

Foreign Countries.—Most of the trade agreements between Canada and foreign countries are on the basis of reciprocal exchange of most-favoured-nation treatment. Usually this means that Canada and the other contracting State agree to accord each other the benefit of the lowest duties applied to similar goods of any other foreign origin. There may be reservations such as concessions which one State may grant to another on historical, political, or geographical grounds, or some other special relationship.

The concessions arising out of most-favoured-nation treatment under the Canadian tariff consist of the rates of the intermediate tariff and lower rates on some goods provided in trade agreements with France, the United States and Poland and in Schedule V of the General Agreement on Tariffs and Trade.

The benefit to Canadian exports of most-favoured-nation treatment in any country depends on the customs and treaty system of the particular importing country concerned. Several foreign nations have maximum and minimum schedules, involving two scales of duties for practically all goods imported. There may be also an intermediate scale of duties. In some countries the minimum rates involve reduced duties only on specified items of their tariffs, which they have conceded in one or more commercial treaties. Some countries adhere strictly to a single-column tariff. Even when they make concessions in a commercial treaty they may incorporate these in the normal tariff, thus avoiding discrimination in favour of or against any country. The number of countries maintaining single-column tariffs, however, is becoming smaller from year to year.

Trade Agreements at Present in Force.—At the present time (May 1, 1948), Canada's tariff relations with other countries are affected by trade agreements, conventions of commerce or similar arrangements made directly between Canada and the country concerned or by participating in treaties made by the United Kingdom with foreign powers, listed as follows:—

Commonwealth Countries

Country	Treaty or Convention	Terms
UNITED KINGDOM....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an Exchange of Letters, Nov. 16, 1938 resulting from United Kingdom—United States Trade Agreement of Nov. 17, 1938. Further modified by General Agreement on Tariffs and Trade and Exchange of Notes, Oct. 30, 1947.	Various concessions by both countries, including exchange of lowest tariff rates (some reservations by Canada) and binding against increase of scheduled preferential duties. Extends also to Colonial Empire. Exchange of Notes, 1947, continues in force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
EIRE.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada concedes British Preferential Tariff in return for British Preferential treatment in Eire. Made for five years and thereafter until terminated on six months' notice.
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. Modified by General Agreement on Tariffs and Trade.	Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months' notice. Preferences modified by G.A.T.T.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. Modified by General Agreement on Tariffs and Trade.	Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated on six months' notice. Preferences modified by G.A.T.T., in force until Jan. 1, 1951, and thereafter until terminated on three months' notice.
UNION OF SOUTH AFRICA.	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Modified by General Agreement on Tariffs and Trade.	Agreement extends list of preferences formerly exchanged in absence of formal agreement. Made for five years and thereafter until terminated on six months' notice. Preferences modified by G.A.T.T., in force until Jan. 1, 1951, and thereafter until terminated on three months' notice.
BRITISH WEST INDIES..	Trade Agreement signed July 6, 1925; in force Apr. 30, 1927.	Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one year's notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months' notice.

Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
SOUTHERN RHODESIA..	General Agreement on Tariffs and Trade.	Without formal agreement Canada extends British Preferential rates to Southern Rhodesia and receives Dominion's Preferential rates of that country. Both countries are participants in G.A.T.T.
INDIA.....	General Agreement on Tariffs and Trade.	Canada extends British Preferential rates to India. Both countries are participants in G.A.T.T.
PAKISTAN.....	General Agreement on Tariffs and Trade.	Canada extends British Preferential rates to Pakistan. Both countries are participants in G.A.T.T.
CEYLON.....	General Agreement on Tariffs and Trade.	Canada extends British Preferential rates to Ceylon and receives preferential rates of Ceylon. Both countries are participants in G.A.T.T.

Non-Commonwealth Countries

Country	Treaty or Convention	Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most - favoured - nation treatment. Provisional application may be terminated on three months' notice. To come into force definitively thirty days after exchange of ratifications for two years and thereafter until terminated on six months' notice.
BENELUX (BELGIUM, NETHERLANDS AND LUXEMBOURG) BELGIAN COLONIES, SURINAM AND CURACAO.	General Agreement on Tariffs and Trade, protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into effect Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions. In force until Jan. 1, 1951 and thereafter until terminated on six months' notice. Colonies still applying most - favoured - nation rates per agreement of 1924 but have expressed intention to make G.A.T.T. schedules effective in 1948.
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most - favoured - nation treatment. May be terminated on one year's notice.

Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. General Agreement on Tariffs and Trade, protocol of Provisional Application signed June 30, 1948.	Exchange of most-favoured-nation treatment. Made for two years from Apr. 16, 1943, and thereafter for one year periods until terminated on six months' notice. Under G.A.T.T. exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
BURMA.....	General Agreement on Tariffs and Trade, protocol of Provisional Application signed June 29, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
CHILE.....	Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15, 1941, and definitively on Oct. 29, 1943.	Exchange of most-favoured-nation treatment. Made for two years from Oct. 29, 1943, and thereafter until terminated on six months' notice.
CHINA.....	Modus vivendi signed Sept. 26, 1946, in effect Sept. 28, 1946.	Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on three months' notice.
	General Agreement on Tariffs and Trade.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada.	Exchange of most-favoured-nation treatment. Protocol of Aug. 20, 1912, provides means for separate termination by Dominions on one year's notice. Exchange of Notes Dec. 30, 1938, continued Treaty in force until Sept. 30, 1939, and thereafter until terminated on three months' notice.
	To be replaced by Trade Agreement signed Feb. 20, 1946.	Exchange of most-favoured-nation treatment. To come into force definitively thirty days after exchange of ratifications for two years and thereafter until terminated on six months' notice.
COSTA RICA.....	Exchange of Notes with United Kingdom of Mar. 1-2, 1933, and Canadian Order in Council of July 20, 1935.	Exchange of most-favoured-nation treatment.

Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
CUBA.....	General Agreement on Tariffs and Trade, protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into force Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
CZECHOSLOVAKIA.....	General Agreement on Tariffs and Trade, protocol of Provisional Application signed Mar. 20, 1948, by Czechoslovakia.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
DENMARK.....	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660-61 and July 11, 1670, apply to Canada.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912, provides means for separate termination by Dominions on one year's notice.
DOMINICAN REPUBLIC	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941.	Exchange of most-favoured-nation treatment. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months' notice.
ECUADOR.....	Modus vivendi by Exchange of Notes of Aug. 26, 1941; in force Oct. 1, 1941.	Exchange of most-favoured-nation treatment. Made for an indefinite period subject to termination on three months' notice.
FRANCE AND FRENCH COLONIES	General Agreement on Tariffs and Trade, protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into force Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice. Colonies still applying rates as per agreement of 1933 and subsequent revisions but intention expressed to make G.A.T.T. schedules effective in 1948.
GREECE.....	Modus vivendi by Exchange of Notes of July 28, 1947; effective Aug. 28, 1947.	Exchange of most-favoured-nation treatment. Made for a period of one year and thereafter unless terminated on three months' notice.
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939.	Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on six months' notice.

Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
ITALY.....	Italian Peace Treaty, Feb. 10, 1947. Canadian Order in Council, Feb. 24, 1948; effective Feb. 20, 1948. Modus vivendi signed Apr. 28, 1948.	For a period of eighteen months following the signing of the Italian Peace Treaty on Feb. 10, 1947, Italy is obligated to grant most-favoured-nation rates to Canada on a reciprocal basis. The modus vivendi provides for exchange of most-favoured-nation treatment for one year and thereafter unless terminated on three months' notice.
LEBANON.....	Special Arrangement by Order in Council of Nov. 19, 1946. General Agreement on Tariffs and Trade.	Exchange of most-favoured-nation treatment. Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947.	Exchange of most-favoured-nation treatment. Entered into force definitively thirty days after exchange of ratifications for two years and thereafter until termination on six months' notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946, in force provisionally same date.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months' notice. To come into force definitively thirty days after exchange of ratifications for one year and thereafter until terminated on six months' notice.
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1928, applies to Canada. General Agreement on Tariffs and Trade.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913, provides means for separate termination by Dominions on one year's notice. Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom - Panama Treaty of Commerce of Sept. 25, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one year's notice.
PARAGUAY.....	Exchange of Notes of May 21, 1940; in force June 21, 1940.	Canadian Intermediate Tariff exchanged for most-favoured-nation treatment in Paraguay. In force until terminated on three months' notice.

Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
POLAND.....	Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment and special reductions for limited lists of goods. Made for one year and thereafter until terminated on three months' notice.
PORTUGAL, INCLUDING MADEIRA, PORTO SANTO, AND AZORES.	Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom - Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one year's notice.
SALVADOR.....	Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on four months' notice.
SPAIN.....	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom - Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on six months' notice.
SWEDEN.....	United Kingdom - Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada.	Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one year's notice.
SWITZERLAND.....	United Kingdom - Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. By exchange of notes Liechtenstein included under terms of this Agreement, effective Aug. 21, 1947.	Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. Convention of Mar. 30, 1914, provides means for separate termination by Dominions on one year's notice.
SYRIA.....	Special Arrangement by Order in Council of Nov. 19, 1946.	Exchange of most-favoured-nation treatment.
	General Agreement on Tariffs and Trade.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice.
TURKEY.....	Exchange of Notes signed Mar. 1, 1948.	Exchange of most-favoured-nation treatment. In effect for one year and thereafter until terminated on three months' notice.
UNITED STATES.....	The General Agreement on Tariffs and Trade, the protocol of Provisional Application signed Oct. 30, 1947; entered into force provisionally Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. In force until Jan. 1, 1951, and thereafter until terminated on six months' notice. If at any time G.A.T.T. is set aside, the Trade Agreement signed Nov. 17, 1938, is to be revived.

Non-Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940.	Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice.
VENEZUELA.....	Modus vivendi signed Mar. 26, 1941; in force Apr. 9, 1941.	Exchange of most-favoured-nation treatment. Made for one year subject to renewal or termination on three months' notice; renewed annually by Exchange of Notes, subject to termination on three months' notice.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927, in force Aug. 9, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one year's notice.

PART II.—ANALYSES OF FOREIGN COMMODITY TRADE***Section 1.—Explanations *re* Canadian Trade Statistics**

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind.

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

* This Part of the Chapter is based on statistics taken from reports prepared under the direction of L. A. Kane, Chief, External Trade Section, International Trade Division, Dominion Bureau of Statistics, Ottawa.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited.

Exports are credited to the country to which they are consigned.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:—

1. Differences in the system of valuation used by Canada and the systems used by other countries.
2. The element of time lag is of considerable importance where Canadian exports are concerned, particularly with bulk goods shipped to other continents. There are always quantities of goods in movement at the beginning or end of any trading period, and these affect the comparability between the two countries for the same period of time.
3. Canada's system of geographical classification, according to country of consignment, which may not be the ultimate destination of the goods.

Imports from the United Kingdom.—Published statistics of Canadian imports entered for consumption have always included several items that may be considered of a non-commercial character. These items were never very large in pre-war years, but since 1939 their inclusion in the total value of imports, from the United Kingdom in particular, has tended to distort published data. The distinction between commercial and non-commercial imports is not always easy to establish, but three items have been segregated, as follows:—

- (a) "Articles for the use of the Imperial Army, Navy and Air Force". These imports consisted almost entirely of war equipment of various kinds for experimental purposes, training and use in Canada by the United Kingdom Government. The values applied to the articles imported under this classification were nominal and no duty was paid.
- (b) "Canadian goods returned". Before the War, this item amounted in value to several hundred thousand dollars annually. Late in 1945, however, the Canadian Government began the repatriation of large stocks of war equipment, the bulk of which was shipped from the United Kingdom. On entering Canada, they were classified under "Canadian goods returned" in the trade returns. They are not shown in the United Kingdom trade returns.
- (c) Settlers' effects, the property of immigrants.

The statement below shows the relation of these non-commercial items to the total.

I.—COMMERCIAL AND NON-COMMERCIAL IMPORTS FROM THE UNITED KINGDOM,
1939-47

Year	Articles for Imperial Forces	Canadian Goods Returned	Settlers' Effects	Non- Commercial Imports	Commercial Imports	Total Recorded Imports
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
1939.....	0.8	0.4	0.6	1.8	112.2	114.0
1940.....	23.5	0.3	0.6	24.4	136.8	161.2
1941.....	81.2	0.1	0.1	81.4	138.0	219.4
1942.....	42.5	0.4	0.1	43.0	118.1	161.1
1943.....	34.3	0.1	1	34.4	100.6	135.0
1944.....	16.2	0.3	0.1	16.6	94.0	110.6
1945.....	21.2	18.8	0.2	40.2	100.3	140.5
1946.....	2.3	60.1	1.4	63.8	137.6	201.4
1947.....	1.5	0.8	3.4	5.7	183.7	189.4

¹ Less than \$50,000.

During the last few months of 1946, the proportion of non-commercial imports declined considerably and dropped to negligible proportions in 1947. When comparing 1946 figures with those of the war years, a more correct picture is presented by the use of commercial import figures as a basis for comparison.

Treatment of Gold in Trade Statistics.—The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

Since 1939, the statistics of movement of coin and bullion have been compiled by the Bank of Canada and the basis has been considerably changed from that previously shown in the Canada Year Book (see p. 528 of the 1940 edition). The following statement of net exports of non-monetary gold for the years 1940-47 on a monthly basis is obtained from the Bank of Canada and these are the only data given publicity.

Statistics showing the *net* exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.

II.—NET EXPORTS OF NON-MONETARY GOLD, 1940-47

Month	1940	1941	1942	1943	1944	1945	1946	1947
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
January.....	21.6	19.2	15.1	13.9	9.4	8.7	9.3	9.0

TOTALS.....	203.0	203.7	184.4	142.0	109.7	96.0	95.8	99.3

Section 2.—Distribution and Composition of Canadian Foreign Trade

Subsection 1.—Historical Development of Canadian Trade

Since 1867 when the provinces of Canada were federated, two countries, the United States and the United Kingdom, have played a dominant role in Canadian trade. The United Kingdom supplied the original Canadian provinces with the bulk of their requirements and British goods held first place in the markets of the new Dominion for some years. Throughout the period the reverse flow of Canadian exports to the United Kingdom consisted mainly of lumber, cattle, cheese, furs and fish with the volume of trade showing a slow but gradual increase over the period 1868-90.

Radical changes began to appear in the direction and composition of Canadian trade from 1890-1900. In 1883, the rapidly expanding republic to the south replaced the United Kingdom as the principal source of Canadian imports, and by 1896 over one-half of Canadian imports were of United States origin. Since that time United States dominance in the Canadian market has been maintained.

The importance of these two countries in Canadian trade is indicated in Table 6 at p. 902, which provides data of imports and exports for representative years from 1886 to the present time.

Commodity Trade.—Before the First World War, Canadian export trade consisted almost entirely of lumber, fish, furs and agricultural and mineral products. The growth of the wheat industry at the beginning of this century was the greatest single dynamic during that period. Between 1896 and 1914, total Canadian exports jumped from \$110,000,000 to over \$431,000,000, with the value of 1914 wheat and flour exports in the neighbourhood of \$140,000,000.

In the decade immediately preceding the First World War, the requirements of a growing industrial organization and the rapid settlement of the West led to large increases in the imports of iron and steel products, machinery and coal, in addition to the consumer goods requirements of an expanding and relatively prosperous economy. The rapid increase in import volume was complemented by an inflow of capital, principally from the United Kingdom.

The First World War spurred the rapidly growing manufacturing industries; iron and steel products and other types of manufactured goods began to appear in volume in the list of exports. These manufactured goods consisted principally of ammunition and similar less complex types of war materials. Following the War, however, the proportion of manufactured goods subsided slightly and in 1920 the eight leading exports, with their aggregate value exceeding 50 p.c. of total exports were the products of primary industry—wheat, meat, flour, planks and boards, newsprint, cattle, wood-pulp and fish. There was, during the period 1920-40, a definite trend towards an increased manufacturing content in the commodities exported, but manufacturing generally took the form of the further processing of raw materials, rather than a gradual development of a separate and integrated manufacturing industry. One of the best examples is the pulp and paper industry, where the chief product can be exported in three forms: pulpwood, the basic raw material; wood-pulp, an intermediate stage; and newsprint, the finished product (although wood-pulp and pulpwood may have other uses). In 1910, the relative proportions of these three stages of the product were 44, 37 and 19, respectively. In 1920 the proportions had changed to 8, 40 and 52 and in 1930 to 7, 21 and 72. By 1939, newsprint formed 73 p.c. of the combined total.

Reference should also be made to the growth of the Canadian mining industry in the years immediately after the First World War. The fall in prices materially reduced the cost of operating gold mines and this industry expanded rapidly. By 1941, gold production exceeded \$200,000,000 in value, although it declined subsequently by nearly 50 p.c. due to the impact of the Second World War. (Gold has been excluded from trade figures because of the difficulty of distinguishing between exports of new gold and exports of monetary gold used in settling international capital obligations.) The production of base metals—nickel, copper, zinc and lead—showed a similar rapid growth, and exports of these products in 1946 exceeded in total the value of gold production.

The following statement shows the relative proportions of exports in each of the stages of manufacture for representative years. The distinction between the three stages is somewhat arbitrary, and in assessing the change it is well to keep in mind that the fully manufactured group, at least before 1939, consisted in large part of processed raw materials such as flour, canned meat and newsprint.

III.—PERCENTAGES OF RAW, PARTIALLY AND FULLY MANUFACTURED GOODS EXPORTED FROM CANADA, SIGNIFICANT YEARS, 1910-47

Year	Raw Materials	Partially Manufactured	Fully Manufactured	Year	Raw Materials	Partially Manufactured	Fully Manufactured
	p.c.	p.c.	p.c.		p.c.	p.c.	p.c.
1910.....	51.2	16.1	32.7	1937.....	38.2	22.5	39.3
1914.....	63.2	10.1	26.7	1939.....	27.8	26.6	45.6
1926.....	46.1	14.7	39.2	1945.....	26.7	16.6	56.7
1929.....	48.0	14.5	37.5	1946.....	26.1	22.1	51.8
1933.....	42.7	14.2	43.1	1947.....	23.2	26.0	50.8

The structure of Canadian import trade according to the stage of production has remained surprisingly stable since the beginning of this century. Fully manufactured goods formed between 60 and 70 p.c. of total imports, with raw materials approximately 25 p.c. The type of commodities imported showed a similar stability. Coal, farm and other machinery and heavy iron and steel products, and consumer goods in partly finished or fully manufactured form such as alcoholic beverages, raw cotton and textiles, wool and fabrics, sugar, rubber, vegetable oils, tea and coffee formed the principal items. One new factor that did exert a significant influence on the commodity structure was the development of the automobile; by 1930 automobiles and parts, and crude and refined petroleum made up 11 p.c. of total imports.

With the great dependence of Canada upon exports as a market for surplus domestic production, and upon imports as a source of many essential commodities, it was not surprising to find the internal level of prosperity in Canada during 1919-39, reacting to fluctuations in economic conditions in other countries. The close relationship between foreign trade and domestic prosperity was demonstrated in the great depression of the early 1930's. The deficit on commodity account in 1929 was caused by a decline in exports and a prosperity-generated increase in the volume of imports. The catastrophic nature of the drop can be seen from the following figures:—

Year	Imports	Domestic Exports	Year	Imports	Domestic Exports
	\$'000,000	\$'000,000		\$'000,000	\$'000,000
1927.....	1,087	1,211	1931.....	628	588
1928.....	1,222	1,339	1932.....	453	490
1929.....	1,299	1,152	1933.....	401	529
1930.....	1,008	864	1934.....	513	649

These figures show how rapidly the disease of world depression can be transmitted to a country greatly dependent on export trade and, in turn, spread from that country through a falling-off in the effective demand for imports.

Trade during the later 1930's improved gradually but not until the Second World War did it approach the level of the boom years 1928 and 1929.

Price-level changes affect the picture to a degree. Prices declined from Confederation to the 1890's, but from then on rose gradually, although the level in 1914 was lower than in 1868. Between 1914 and 1920 the price level rose by 150 p.c., suggesting that the increase in trade volume was not nearly so great as indicated by the value figures. Wartime price changes must be used with caution, however, as some of the chief components of shipments overseas were goods neither produced nor exported prior to the War. After 1920 prices declined steadily until 1928, when the level was approximately 50 p.c. higher than 1913. The depression precipitated a rapid decline until, by 1933, prices were back at the 1913 level. Prices rose again following the depression, and in 1938 stood about 25 p.c. higher than in 1913. During the Second World War price increases were held back, and by 1944 stood only about one-third above the level in 1938.

Impact of the Second World War.—The Second World War provided a stimulus to Canadian exports similar to that experienced in the First World War. With Canadian farms and factories working at maximum capacity to supply the demands of Allied Nations, the value of exports by 1944 was nearly four times as great as in 1938. Imports more than doubled in the same period. Table 10 at p. 905 gives the leading imports into Canada for the years 1939, and 1946-1947. The commodities are arranged by order of importance in 1947 and the table shows the changing significance of these major imports during the period.

The most significant difference in the impact of the two World Wars on trade was the condition of Canadian industrial development at the beginning of each. In 1914, the iron and steel and manufacturing industries in Canada were still in an embryonic state and the Canadian contribution to the Allied effort consisted mainly of food, forest and mineral products. By 1939, heavy industry had become well established and the transition to war production was accomplished with less difficulty. Although primary products still dominated the list of exports, munitions and war supplies formed a significant portion of the total. The following statement lists the important groups over the wartime period.

IV.—EXPORTS BY IMPORTANT WARTIME GROUPS, 1940-46

Item	1940	1941	1942	1943	1944	1945	1946
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000

Munitions and war supplies ¹ ...	84.2	182.5	804.8	1,115.7	1,158.4	753.7	99.9
TOTALS, DOMESTIC EXPORTS ² ..	1,179.0	1,621.0	2,363.8	2,971.5	3,440.0	3,218.3	2,312.2

¹ Includes motor-vehicles and parts, military wheeled vehicles, tanks, guns, aircraft, cartridges, shells, explosives and Canadian Navy, Army and Air Force stores.

² Includes other items not specified.

One of the most interesting features of the growth in wartime exports was that it was accomplished with relatively little fall, if any, in the domestic standard of living.

Table 11 at p. 905 gives the value of leading exports for the years 1939 and 1946-1947. The commodities are arranged by order of importance in 1947 and the table shows the changing significance of these major exports during the period.

Subsection 2.—Recent Developments in Canadian Trade

Throughout the War an increasingly larger proportion of Canadian imports came from the United States, see Table 2, p. 896. Imports of iron and steel machinery, heavy capital equipment, producers materials for war equipment, coal and petroleum reached unprecedented levels. Rising incomes in Canada showed gains in consumer goods imports. Allowance should be made for the fact that some goods from other foreign countries were routed through United States ports to avoid the dangers of the longer sea route to Canada, and thus were attributed to the United States in the trade figures.

By 1947, post-war trends in Canadian trade had begun to emerge. Canadian products continued high in world demand to meet with food products the urgent needs of devastated areas. Exports of forest products, at 32 p.c. of the total value and base metals, at 11 p.c., illustrate the continued importance of primary products in Canadian export trade.

The two countries which have dominated Canadian trade since exports and imports for the Dominion were first recorded maintained that position in 1947. Thirty-seven per cent of the value of exports went to the United States, 27 p.c. to the United Kingdom. Nearly 60 p.c. of purchases by the United States were forest products, with one item, newsprint, making up over 28 p.c. of the total value of exports to that country. Over 60 p.c. of United Kingdom purchases were foodstuffs.

Countries whose imports from Canada were financed chiefly by loans or donations received a wide variety of Canadian goods, although the emphasis was on food products and on vehicles and ships for the rehabilitation of destroyed transport systems. The principal countries in this group are shown below, with the main items exported to each in 1947.

<u>Country</u>	<u>Value</u>	<u>Item</u>
	\$'000,000	
France.....	81.1	Trucks and parts, ships, rye, wheat and flour, rubber, copper, lead, nickel, zinc, railway locomotives.
Netherlands.....	55.9	Trucks, woollen clothing, wheat, planks and boards, copper, fertilizers, ships.
Belgium.....	52.7	Wheat, canned fish, canned meats, aluminum.
Italy.....	35.7	Flour, rye, rubber, aluminum.
China.....	35.0	Flour, ships, railroad ties, newsprint paper, machinery, copper, fertilizers.
Norway.....	20.3	Wheat, flour, nickel, copper, rye.
Poland.....	15.4	Canned meats, donations, fish, rye, aluminum.

Canadian exports to the British Commonwealth, other than the United Kingdom, exceeded \$417,000,000 in 1947. Wheat, railway locomotives and cars, automobiles and parts, and lumber predominated, although the list of exports to

these countries showed wide diversification. Principal exports to leading countries in 1947 were as follows:—

<u>Country</u>	<u>Value</u>	<u>Item</u>
	\$'000,000	
British West Indies.....	81·7	Flour, miscellaneous food, clothing and manufactured goods.
Union of South Africa.....	66·7	Planks and boards, canned fish, automobiles and parts, paper, textiles.
Australia.....	60·3	Automobiles and parts, newsprint, planks and boards, cotton fabrics, artificial silk fabrics, aluminum.
Newfoundland.....	55·1	Flour, coal, gasoline, clothing, boots and shoes, machinery.
India.....	42·9	Flour, automobiles and parts, paper, aluminum, copper.

A very large increase in the value of exports to Latin America is indicated by the 1947 export figures. Exports to the twenty countries in this group comprised both primary and manufactured goods. The four leading countries, with principal commodities exported, were as follows:—

<u>Country</u>	<u>Value</u>	<u>Item</u>
	\$'000,000	
Argentina.....	31·7	Newsprint, crude rubber, planks and boards, sewing machines, agricultural machinery, potatoes, automobiles, aircraft, aluminum.
Brazil.....	31·7	Flour, newsprint, sewing machines, ships, lead, aluminum.
Venezuela.....	13·0	Flour, newsprint, automobiles, machinery.
Mexico.....	11·7	Newsprint, machinery, leather, agricultural machinery, railway cars.

The volume of Canadian imports has always been closely related to the level of national income and domestic prosperity. In 1947, with national income close to the wartime peak of 1944 and with the enforced restraints of wartime largely eliminated, consumer spending reached a record high. The accumulated demand was reflected in the import figures, particularly in the field of consumer goods. The increased domestic sales of goods produced in Canada resulted in increased requirements for fuels, producers' materials and capital equipment. Prosperity in the agricultural sector, in part due to the subsidizing of exports, increased the demand for imported farm machinery. The level of imports was apparently affected little by the price rise occurring throughout the year, with availability the prime consideration.

The total value of imports in 1947 approximated \$2,600,000,000, with three-quarters of the total coming from the United States. In spite of the increased production for export in other countries, the United States appears to have a firmer grip on the Canadian market than it had before the War. The Canadian demand for United States goods is the result of a combination of factors. From the 1920's, the Canadian preference for United States manufactured consumer goods, or for domestic goods on the United States pattern, has been steadily growing. This

growing preference is not unnatural, in view of the increasing growth of United States branch plants in Canada; the exposure of Canadians to United States radio, magazines and national advertising campaigns; proximity of United States industries to Canadian consumers; a minimum of foreign exchange problems between the two countries, and the use of the same language and similar methods of business. The return of the Canadian dollar to parity with the United States dollar early in July, 1946, from a 10 p.c. discount position, served partially to offset the price increases and improved the relative position of United States goods on the Canadian market. The trend in 1947 was particularly pronounced, as the value of imports from the United States in that year was over 40 p.c. greater than in 1946. Exports to the United States have not kept pace and the commodity deficit on current account amounted, in 1947, to over \$900,000,000.

Apart from the United States, the sources of Canadian imports may be divided into three principal geographic groups. The first of these is the United Kingdom, commercial imports from which were valued at \$183,700,000 in 1947, an increase of 34 p.c. over 1946 and 49 p.c. over the 1935-39 average. Principal imports from the United Kingdom were woollen fabrics and yarns, cotton fabrics, tin and tableware.

The group second in importance comprised other countries of the Commonwealth; total imports from this source were valued at \$165,024,000 or 19 p.c. higher than in 1946. The principal countries, with the chief items of imports from each, are listed below:—

<u>Country</u>	<u>Value</u>	<u>Item</u>
	\$'000,000	
India.....	42.2	Jute fabrics, tea, rugs.
British Malaya.....	16.9	Rubber, tin.
Australia.....	14.2	Wool, raisins, rabbit skins, wines.
British Guiana.....	12.4	Bauxite ore, sugar.
Ceylon.....	11.7	Tea, rubber, cocoanuts.
New Zealand.....	10.8	Wool, sausage casings, hides.

Imports from Latin America, at \$159,100,000, were the third group in importance. The 1947 total was 27 p.c. higher than the corresponding figure for 1946 and more than eight times as great as the average for 1935-39. Principal countries, with commodities, were as follows:—

<u>Country</u>	<u>Value</u>	<u>Item</u>
	\$'000,000	
Venezuela.....	46.7	Crude petroleum.
Cuba.....	23.7	Sugar, pineapples, tobacco, industrial alcohol.
Argentina.....	18.0	Vegetable oils, dyes, wines.
Mexico.....	17.0	Raw cotton, vegetable fibres, tomatoes.
Brazil.....	13.9	Coffee, raw cotton, wax, cocoa beans.
Guatemala.....	9.5	Bananas, coffee.
Colombia.....	9.2	Coffee, crude petroleum.

Section 3.—Statistics of Foreign Trade

In considering the figures in the following tables, reference should be made to the explanatory notes on trade statistics at pp. 885-887. It must be emphasized that gold imports and exports are excluded from all tables. Imports from the United Kingdom from 1939 to 1946 are distorted by the inclusion of large amounts of non-commercial items in the trade returns (see p. 886). United Kingdom figures can be viewed in a proper perspective only if these non-commercial items are excluded from the recorded import statistics.

Subsection 1.—Trade by Geographic Areas

The tables in this Subsection provide information about Canada's foreign trade in total, by continents, and by countries with special reference in Tables 4 to 7 to the division between Empire and foreign countries.

1.—Trade of Canada (Excluding Gold) with All Countries, 1919-47

NOTE.—These figures are available on a calendar-year basis only since 1919; for figures for the fiscal years 1868-1919, see the Canada Year Book 1940, p. 526.

Year	Imports			Exports			Balance of Trade: Excess of Exports (+) Imports (—)

¹ See p. 886 *re* Canadian military equipment returned. The percentages are considerably distorted by this factor in 1945 and 1946. With the military equipment excluded, the percentages become: 1945, 7.8, 76.7, 8.4, 7.1; 1946, 7.6, 75.3, 7.4, 9.7.

At p. 890 of the 1947 edition of the Year Book it was pointed out that statistics of dutiable and free imports from British Empire and foreign countries together with ad valorem rates of duty collected were not then available but would be given in this edition.

Tables 7 and 8 show such dutiable and free imports for 1946-47 with the proportions and ad valorem rates from 1939-47.

Table 12 provides an excellent survey of the changing nature and value of Canadian commodity trade during the last sixty years. The series ends with 1939 since, after this date, trade was seriously affected by the abnormal influence of the Second World War. Statistics of trade during the period 1944-47 are dealt with on pp. 912-923.

Imported woollen and cotton goods, coal, rolling-mill products and sugar were among the six leaders until 1930 when cotton and woollen goods and sugar were replaced by machinery, petroleum and alcoholic beverages. This is an indication of the changes wrought by time in the Canadian economy; home manufactures by 1930 were replacing more of the fully manufactured goods formerly imported, especially textiles, machinery and rolling-mill products. This trend is also shown by the increase in coal imports from a value of \$8,013,156 in 1890 to \$56,812,418 in 1930 or 609 p.c.

Agricultural and forestry production have taken a leading part in export trade since 1890. At that time, planks and boards, cheese, fish, cattle, barley and furs were the six main exports. In 1900, wheat and gold replaced the barley and cattle exports of 1890. Wheat, since that time, has held first place in export trade until 1939 when it was replaced by newsprint which during the three decades, 1910 to 1930, has increased in value from \$2,612,243 to \$145,610,519 or 457 p.c. In 1939 export of this commodity had dropped by about 26 p.c.

12.—Canada's Leading Imports and Domestic Exports, for Decades Ended Mar. 31, 1890-1930 and 1939

NOTE.—Commodities arranged in order of importance, 1939.

1 Not given in 1944.

Subsection 3.—Imports and Exports by Degree of Manufacture, Origin and Purpose

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary, a picture with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Tables 15 and 16 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 17, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the industrial expansion for the purposes of War must be borne in mind in using the figures for the past six years.

¹ In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

PART III.—SUMMARY OF EXTERNAL TRANSACTIONS

Section 1.—Canadian Balance of International Payments*

Although Canada continued to have a small current surplus of exports of goods and services over imports in 1947, acute balance of payments problems developed during the year with the rapid decline in official reserves of gold and United States dollars. The principal factor contributing to the loss of reserves was the great expansion in the current trade deficit with the United States at a time when a large part of the current surplus of exports to other countries was financed by loans and export credits from the Federal Government and, consequently, did not yield convertible exchange.

The surplus of credits on current account with all countries was \$47,000,000, excluding contributions for official relief of \$38,000,000. No convertible exchange was received from exports to overseas countries which were financed by export credits of \$563,000,000. In addition, there were net outflows of capital of \$154,000,000, mainly for the redemption of Canadian securities owned abroad which also led to withdrawals from Canada's official reserves, as well as the gold subscription of \$74,000,000, by Canada to the International Monetary Fund. These combined factors led to a loss of official reserves of \$743,000,000 during 1947.

Wide gaps in Canada's current accounts with overseas countries and the United States are not a new feature of Canada's balance of payments. In pre-war years, current surpluses with overseas countries normally produced convertible exchange which was available for meeting current deficits in the United States. But the size of the deficit with the United States in 1947 was unprecedented and the current surpluses with the United Kingdom and other overseas countries were larger than

* Prepared by C. D. Blyth, Chief, Balance of Payments Section, International Trade Statistics Division, Dominion Bureau of Statistics, Ottawa.

in any previous peacetime year. The record size of these opposite types of disequilibrium together with the international financial difficulties of many of Canada's overseas customers produced a combination of conditions which led to heavy drains on Canada's official reserves even though there was still a surplus on current account with all countries.

The principal changes which took place in 1947, in comparison with 1946 when there was a much smaller loss of official reserves, were the reductions in the current account surplus to \$47,000,000 from the surplus of \$357,000,000 in 1946 and the widening of the gaps in both the accounts with the United States and with overseas countries. Canada's current deficit with the United States increased from \$613,000,000 in 1946 to \$1,138,000,000 in 1947. At the same time the current surplus with overseas countries increased from \$970,000,000 to \$1,185,000,000 of which export credits and loans by the Canadian Government financed \$563,000,000. The corresponding financial aid from Canada, in 1946, was \$750,000,000. Finally, other capital movements were outward in 1947 in contrast to inward movements in 1946.

Because of the loss of official reserves remedial measures referred to on p. 935 were introduced in November, 1947, by the Federal Government. These were to have far-reaching effects upon the Canadian balance of payments, being designed both to conserve the expenditure of United States dollars and to provide for increased receipts of dollars. At the same time, arrangements for a credit to the Federal Government of \$300,000,000 from the Export-Import Bank of Washington, to be available during 1948, were announced as a source of United States dollars to supplement the remaining official reserves.

Transactions with the Sterling Area.—The current surplus from net exports of goods and services to the countries of the Sterling Area rose from \$669,000,000 in 1946 to \$872,000,000 in 1947, the highest point reached in any peacetime year. Transactions with the United Kingdom accounted for \$632,000,000 and transactions with other Sterling Area countries amounted to \$240,000,000. Record peacetime levels of exports to both the United Kingdom and other Sterling Area countries were the principal factors contributing to the increased current surplus. British purchases of food and raw materials, much of which was covered by official contracts, made up most of the exports of \$750,000,000 to the United Kingdom. There was a general expansion in exports to other countries of the Sterling Area to a total of \$366,000,000 as supplies of Canadian commodities increased. The expansion was also affected by the general removal of import restrictions in these countries in 1946. Although many of these restrictions abroad were reimposed late in 1947 their restrictive effects on Canadian exports were not notable during the year. Increases in exports to Australia, Eire, New Zealand, the British West Indies and other Colonial areas were particularly notable with resulting substantial export balances. Exports to British South Africa and India were slightly less than in 1946, although in the former case the export balance was higher and continued to be the largest single source of net credits with other Sterling Area countries.

Other factors contributing to the credit balance with the Sterling Area are freight and shipping transactions. Besides the earnings of Canadian transportation companies on inland freight there were substantial earnings of Canadian shipping companies from carrying exports to the United Kingdom and other Empire countries. In addition, the expenditures of British ships in Canadian ports are large. Miscellaneous current transactions including unilateral items like transfers of immigrant funds and inheritances also contributed to the credit balance with the Sterling Area.

Imports from the United Kingdom and from other countries of the Sterling Area were appreciably higher in 1947 than in 1946 due, notably, to important gains in imports of British textiles. Total current payments, however, to the United Kingdom by Canada were slightly less in 1947 because of the decline in overseas expenditures by the Federal Government, which amounted to \$73,000,000 in 1946. Payments of interest and dividends by Canada to the United Kingdom declined as compared with 1946, due mainly to a decrease in interest payable arising from the continued repatriation of bonds. At the same time, Canadian travel expenditures in the United Kingdom increased sharply following the return of some passenger liner services and the expansion of transatlantic air travel.

The principal methods of financing the British current account deficiency in Canada were by drawings on the Canadian loan and sales of convertible exchange. Drawings of \$423,000,000 on the \$1,250,000,000 Canadian loan covered about one-half of the current account balance with the Sterling Area in comparison with \$540,000,000 in 1946. Receipts of convertible exchange from the United Kingdom totalled \$505,000,000 during 1947. These negotiated receipts of convertible exchange in 1947 should be related to the total British drawings on the Canadian loan of \$963,000,000 to the end of 1947, as no convertible exchange had been received from the United Kingdom in 1946 following the receipt of gold in March of that year in connection with the settlement of war claims. While the United Kingdom at the beginning of 1947 introduced arrangements for the convertibility of sterling with respect to transactions with Canada and a number of other countries, it should be noted that these arrangements during the period up to August in which they were in effect, had only minor effects upon the way in which transactions were carried out between Canada and other countries. Other capital movements between Canada and the Sterling Area, in 1947, included outflows for the redemption of Canadian securities of approximately \$41,000,000 and repurchases of about \$9,000,000 of outstanding Canadian securities from the United Kingdom. In an opposite direction was the repayment by the United Kingdom of \$104,000,000 on the 1942 loan from the Federal Government.

Current Deficit with the United States.—A very large increase occurred in current expenditures by Canada in the United States in 1947. This led to an expansion in the current deficit with the United States which rose from \$613,000,000 in 1946 to \$1,138,000,000 in 1947.

The great rise in expenditures in the United States was affected by unprecedented demands, improving supplies of commodities in the United States at a time when supplies elsewhere were subnormal, and by the increase in the level of prices in that country. At the same time Canadian exports of many staple commodities to the United States were prevented from rising by available productive capacity in Canada which was fully utilized. Contributing to the unprecedented Canadian demands for United States goods was the exceptional volume of investment in Canada. Demands from these expenditures were superimposed upon existing heavy Canadian demands arising from the high levels of Canadian consumption stimulated by continued high incomes from exports as well as by exceptional investment activity. The accumulation of savings and deferred demands of the wartime period contributed further to the level of Canadian imports.

Of paramount importance as a factor in increasing imports in 1947 was the volume of domestic investment. Gross domestic investment in plants, equipment and housing increased by more than one-half in 1947 compared with 1946. The

exceptional strength of these demands is also indicated by the ratio of gross home investment to gross national expenditure which was over 21 p.c. in 1947 compared with about 15 p.c. in 1946 and about 11 p.c. immediately before the Second World War. Investments in industrial plants and equipment have a particularly high United States dollar content giving rise to imports of machinery and industrial equipment and steel and other materials purchased in the United States. The general rise in Canadian inventories also had a substantial United States dollar content. The combined effect of these exceptionally heavy demands was to increase the ratio which Canadian imports of merchandise represent of the gross national product of Canada to a new high of 19.4 p.c. in 1947 compared with 15.6 p.c. in 1946.

Canadian imports from the United States rose from close to \$1,400,000,000 in 1946 to just under \$2,000,000,000 in 1947. The increase was distributed among all the principal groups of commodities. Approximately one-half of the increase in value occurred in imports of metal products which made up 43 p.c. of the total imports from the United States. Many of the direct demands arising from Canadian investment activities are reflected in this group of imports which includes machinery of all kinds and industrial materials such as steel. Other important gains in imports of fuels such as coal and petroleum also arose from the exceptional level of economic activity in Canada. The principal gain in imports of consumer goods was in textiles, particularly in cotton products. Other types of commodities imported from the United States also increased appreciably but gains were not as marked as in the case of the groups already noted.

Although the largest single contributor to the increased current deficit with the United States was the rise in the merchandise deficit there were also other important contributory factors. Larger outlays on both income and transportation account were outstanding among the changes in non-commodity transactions. The increase in payments on income account was due mainly to the great increase in dividends paid by Canadian subsidiaries to United States parent companies, reflecting larger earnings as well as some withdrawals of income accumulation in earlier years. Increases in dividend payments were only slightly offset by the decline in payments of interest on Canadian bonds and debentures held in the United States. The increased deficit on transportation account was a result of the greater volume of Canadian imports from the United States combined with higher freight rates in the United States. In addition to these increased payments there was a decline in non-recurring receipts of dollars through War Supplies Limited, although some substantial refunds by the United States of war expenditures, in 1947, tended to offset part of this decline in receipts. At the same time receipts from gold production remained relatively stable and the balance of receipts from the tourist trade was less than in 1946 because of the large rise in Canadian travel expenditures in the United States which was even greater than the appreciable increase in United States travel expenditures.

Capital Movements with the United States Dollar Area and Changes in Official Reserves.—The current deficit with the United States of \$1,138,000,000 exceeded receipts of convertible exchange from other countries by \$500,000,000.

Convertible exchange from the United Kingdom and from other overseas countries of \$638,000,000 was received in the financing of part of the credit balance on current account with overseas countries of \$1,185,000,000. In addition, there were net capital outflows of \$163,000,000 to the United States dollar area and Canada's gold subscription to the International Monetary Fund of \$74,000,000 which also contributed to the reduction in official liquid reserves during 1947 of \$743,000,000. These reserves amounted to \$502,000,000 at the end of 1947 compared with \$1,245,000,000 at the end of 1946.

The general effect of these changes on capital account with the United States dollar area was to increase the balance of Canadian indebtedness to the United States dollar area by close to one-half billion dollars when account is taken of the decline in official reserves. Capital movements within the United States dollar area, apart from the reduction in the official reserves, had the effect of reducing Canadian indebtedness to the United States as there were predominant outflows of capital from the redemption of securities which were only partly offset by inflows for direct investment in Canada and other purposes.

Security transactions made up the largest part of the capital movements as in recent years but the principal group of transactions in 1947 was the redemption of issues held in the United States and other foreign countries which amounted to \$223,000,000 during the year. Besides normal maturities there were some substantial issues called in advance of maturity. Other transactions in Canadian securities were largely offsetting in contrast to the predominant capital inflows from the sale of outstanding securities characteristic of early years. Capital movements which were not in connection with security transactions resulted in net inflows of capital to Canada both through liquidations of Canadian assets abroad and increases in Canadian liabilities to the United States, including inflows of capital for direct investment in Canada.

In addition to the gold subscription to the International Monetary Fund there was the subscription made in Canadian currency, \$194,000,000 in the form of non-interest bearing demand notes and about \$31,000,000 in the form of a cash balance. Canada's subscription made to the International Bank for Reconstruction and Development in 1947 was in the form of non-interest bearing demand notes totalling \$32,500,000.

Transactions with Other Foreign Countries.—Net exports of goods and services to other foreign countries amounted to \$351,000,000 in 1947 but a major part of this current surplus did not yield convertible exchange as a large volume of exports was financed by export credits or other Government assistance. Official contributions of relief made up \$38,000,000 of the above current account balance leaving \$313,000,000 to be financed by capital outflows or receipts of convertible exchange. Net export credits from the Federal Government financed \$140,000,000, of this current balance compared with \$209,700,000 in 1946 and \$104,600,000 in 1945. Net receipts of convertible exchange from foreign countries overseas as a group are estimated at \$133,000,000 in 1947. Most of these net receipts originated in trade with Europe.

Section 2.—The Tourist Trade*

The tourist trade ranks among the important invisible items in Canada's balance of international payments. This is shown by the tables at pp. 943-944. Expenditures in Canada of travellers from other countries are comparable in their effect as a source of foreign exchange, to exports of commodities in the balance of payments and, similarly, the expenditures of Canadian travellers in other countries are comparable to imports of goods. Hence there is special significance in the balance of revenue remaining after total disbursements by Canadian travellers abroad have been deducted from total receipts left in Canada by departing non-residents.

Normally, disbursements or debits on account of tourists range between 45 and 55 p.c. of receipts or credits. Wartime restrictions on export of travel funds resulted in exceptionally low debits in the years 1941 to 1943, but modification of the restrictions since then brought back the debit position in 1945 and 1946. In fact Canadian travel abroad accompanied by retarded development of United States travel in Canada raised debits, in 1947, to the unprecedented level of 68 p.c. of credits. Actually, receipts from foreign travellers in that year were higher than in any other year since 1941, but due to abnormally high disbursements abroad, net credits were lower than in 1946.

The flow of travel across the International Boundary is unmatched at any other frontier, and the Canadian participation in this flow when considered in relation to the population of Canada is much greater than the United States participation

* Prepared under the direction of C. D. Blyth, Chief, Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics, Ottawa.

in proportion to the population of the United States. In 1947, Canadian travel expenditures in the United States were about \$12 per capita of the population of Canada, whereas American expenditures in Canada were not much more than \$1.50 per capita of the population of the United States. On the other hand, average expenditures per traveller do not vary much as between Canadians and United States citizens when considered in the aggregate.

To conserve the supply of United States dollars, acute shortage of which was experienced by Canada, along with many other countries, in 1947, remedial measures were introduced by the Canadian Government in November of that year. Among other things restrictions were placed upon pleasure travel involving the expenditure of United States dollars. The new regulations limited the amount of United States dollars a Canadian resident was permitted to use for pleasure travel to \$150 during the period of 12 months ended Nov. 15, 1948. Expenditures of reasonable amounts of United States dollars for business and other necessary reasons were, however, still permitted along with reasonable amounts to cover travel to countries of the Sterling Area. Purchases of foreign merchandise declared to the Canadian Customs by returning Canadians were drastically reduced by import prohibitions.

In spite of these restrictive measures, Canadians remain the most persistent border-crossing nationals in the world.

As a Canadian source of United States dollars the tourist industry ranks second after the export of newsprint. The employment created by the primary and secondary effects of the inflow of tourist funds is widely distributed throughout Canada. Although the whole Canadian economy benefits as a result, the benefit is of particular significance to otherwise unproductive parts of the country which are favoured with tourist attractions. The tourist trade has raised the standard of living in such areas. Good roads, better shops, improved quality and variety of merchandise, better hotels, better steamship and railway services and many other improvements have resulted.

The current trend towards increased social benefits in Canada and the United States has had considerable influence on the international tourist trade. Holidays with pay are now a common experience with a large number of industrial workers and, together with the almost universal advances in standard wage rates, have added considerably to the ability of workers in both the United States and Canada to enjoy extended vacations.

United States Travel Expenditures in Canada.—Expenditures in Canada in the year 1947 by tourists and other travellers from the United States totalled \$235,000,000 an increase of 9 p.c. over the previous high mark established in 1946. The most encouraging feature of the 1947 season was the strong showing made by the automobile traffic which before the War formed the backbone of the tourist industry in Canada. United States dollars brought into Canada by motorists in 1947 almost equalled the aggregate amount brought in by persons crossing the International Boundary by all other means, and were more than six and one-half times more than in 1943 when automobile travel was severely curtailed by gasoline rationing, tire rationing, and other wartime restrictions.

Receipts from travellers arriving by train reached a peak of \$67,000,000 in 1944, a condition resulting directly from restricted automobile traffic. The high level achieved in that year was reduced in successive years until by 1947 it was \$56,000,000; however, even this amount is well above pre-war levels. Travel from the United States by water has made a continuous recovery from the low mark of 1942 when vessels of all kinds were either directly or indirectly involved in the war effort. In 1942, receipts from arrivals by boat were only \$4,000,000. Five years later, in 1947, receipts were \$22,000,000. On the eastern seaboard the resumption in the summer of 1947 of the popular steamship service between Boston and Yarmouth was an important contributing factor.

The growth in tourist traffic by air during the past decade has been spectacular. In 1939, receipts from aeroplane passengers amounted to approximately \$1,000,000 annually; by 1947 they had reached \$13,000,000 annually and showed a more rapid rate of increase than any other means of travel.

Receipts from passengers entering Canada by bus increased in 1947 but at a slower rate of increase than was shown by most other means of travel.

Canadian Travel Expenditures in the United States.—Expenditures of Canadian travellers in the United States during 1947 are estimated at \$152,000,000, or \$22,000,000 more than the previous record established in 1946. (For purposes of comparison it may be pointed out that, for the period of ten years immediately preceding the war, such expenditures were \$52,000,000, and the pre-war high in 1929, was \$81,000,000.) The increase in Canadian expenditures in the United States can be attributed not only to increased volume of traffic but to a rise in the average expenditure per person for almost all types of travel. Higher prices for practically all goods and services paid for by the travellers have contributed to the rise in expenditures.

As a means of conveying Canadian travellers across the International Boundary the automobile has always played a less important role than it has in bringing United States travellers to Canada. In 1947, automobile travel ranked third, after train and bus, when considered in relation to expenditures of Canadian travellers in the United States. However, automobile traffic is increasing more rapidly than bus traffic and as production is increased may bring a reversal of the relative positions of these two means of conveyance.

Expenditures of Canadians returning from the United States by rail in 1947 showed an increase of 5 p.c. over those of 1946. This increase was due entirely to higher average spending per passenger, as the number of travellers by rail showed a slight decline. Expenditures of Canadians returning by boat, plane and other miscellaneous means of conveyance in 1947, were only 22 p.c. of the total, a slight increase over 1946.

Travel Between Canada and Overseas Countries.—Tourist travel involving ocean voyages virtually ceased under wartime conditions, and expenditures of travellers from overseas countries were mainly by persons travelling on official or

other business. Canada's overseas travel account, which has shown a credit of \$17,000,000 and debit of \$22,000,000 in a year such as 1937, shrank to a credit of \$3,000,000 and a debit of \$2,000,000 in 1945. In the following year credits and debits had both recovered to \$6,000,000 and in 1947 they stood at \$10,000,000 and \$15,000,000 respectively.

Shipping losses incurred during the War and priority for returning Service personnel and their families held overseas travel to a minimum until 1947. In that year many reconverted transports were back in passenger service carrying travellers to and from Canada directly and by way of New York and other United States seaports. A rapidly growing transatlantic air service also helped to bring the overseas tourist trade close to pre-war levels in spite of restrictions on export of Sterling and other currencies for pleasure travel.

ACTIVITIES OF THE WARTIME PRICES AND TRADE BOARD, 1947-48†

The activities of the Wartime Prices and Trade Board up to the end of 1946 in controlling prices and promoting an adequate supply and orderly distribution of essential goods and services, and later in the program of readjustment and decontrol, are described in previous issues of the Canada Year Book. This article deals with developments in 1947 and the first six months of 1948. Developments in controls over the distribution of goods in short supply are described in the Chapter on Domestic Trade (pp. 837-841).

Price Decontrol.—Though substantial progress had been made in the program of orderly decontrol and readjustment, ceiling prices still applied to practically all essential items or staple articles of food, fuel, clothing and shelter at the beginning of 1947. A considerable variety of such articles were being subsidized and certain important supply and distribution controls remained in effect.

Beginning in January, 1947, there were five major decontrol steps taken during the year, of which the most important was that of September, and by the end of October the greater part of the structure of the wartime stabilization program had been dismantled.

Decontrol was undertaken with the realization that it involved difficult adjustments. The general policy was to withdraw each control at the period of the year when supplies were at their seasonal peak in order to minimize immediate price adjustments and in order to allow the primary producer to share in such benefits as might accrue from a free market. It was not possible because of the complex nature of price relationships to adopt this approach with respect to each individual commodity but it was applied to broad groups of commodities. Thus, eggs and poultry were decontrolled in the early spring, butter and other dairy products in the early summer, canned goods in the middle and late summer, cotton textiles, meat, feed grains and farm machinery in the early autumn.

The first decontrol step of the year became effective on Jan. 13, 1947, at which time the list of items under the price ceiling was substantially reduced, one of the more important deletions being fresh fruits and vegetables with the exception of apples. A further major measure of decontrol followed on Apr. 2, 1947. In announcing this step in the House of Commons, the Minister of Finance stated

* Except as otherwise credited, this Chapter has been revised under the direction of H. F. Greenway, Director, Labour and Prices Division, Dominion Bureau of Statistics, by F. H. Leacy, Acting Chief, Prices Section.

† Prepared by the Wartime Prices and Trade Board.

with reference to the general principles underlying decontrol "... our plan is to remove end products or fabricated commodities from the ceiling as their production reaches the point where a major shortage does not exist. But to ensure stability until markets find their level after some five and a half years control, we think it wise to continue for a further period many of the basic materials". A few of the important items decontrolled at this time were wool and wool products, footwear, fuels, motor-vehicles, certain durable goods, and plumbing and sanitary ware.

Two months later on June 9, 1947, ceiling prices were lifted on additional items including dairy products, copper, lead, zinc, and hardwood lumber. A few items were released from price control at the beginning of July and others followed later in the summer. Finally a very extensive measure of decontrol became effective Sept. 15, 1947, with the lifting of price ceilings on the majority of goods and services still remaining under control. Some of the important items released from the price ceiling at this time were flour and bread, cotton, jute and sisal fibres and yarns, and all remaining articles of clothing (mostly cotton), cotton household furnishings, hides, skins and leather, softwood lumber, farm machinery and equipment. The decontrol of meats was delayed until Oct. 22, because of industrial disputes in packing plants and on that date feed grains were also decontrolled. By the end of October, 1947, the list of articles still under the price ceiling had been reduced to a very small number of items. The principal commodities included sugar, molasses, dried raisins, currants and prunes (these dried fruits were decontrolled on Dec. 31, 1947), wheat, the principal oil-bearing materials, (flaxseed, sunflower seed and rapeseed), the more important oils and fats, soaps, primary iron and steel products, tin and alloys containing more than 95 p.c. tin.

Reimposed and Continuing Controls.—Events in late 1947 and early 1948 led to a return to price control on some items. The prohibition of, or the imposition of quota restrictions on, the importation of fruits and vegetables on Nov. 18, 1947, was followed by a sharp price fluctuation and led to the imposition of ceilings on the more important canned fruits and vegetables as well as on fresh cabbages and carrots and to mark-up control on canned citrus fruit juices, citrus fruits and grapes. Butter was brought back under the ceiling on Jan. 19, 1948, while action was taken to reduce certain fertilizer prices in February.

In March, 1948, Parliament, by an amendment to the Continuation of Transitional Measures Act, extended authority to continue price control until Mar. 31, 1949. As of Apr. 1, 1948, the following goods were subject either to price ceilings or to mark-up controls under the Wartime Prices and Trade Board: sugar, molasses, the more important canned fruits and vegetables, canned citrus juices, citrus fruits, grapes, cabbage, carrots, butter, wheat, the principal oil-bearing materials (flaxseed, sunflower seed and rapeseed), the more important oils and fats, soaps, primary iron and steel, and tin and alloys containing more than 95 p.c. tin.

Changes in price controls since Apr. 1, 1948, include the decontrol of tin in May, the decontrol of all oils and fats, soaps and oil-bearing materials in August, and the reintroduction of bread and flour ceilings in August.

Subsidies.—The withdrawal of subsidies was a necessary part of the decontrol policy. In line with this policy,* a considerable reduction in the scope of subsidy payments had already been accomplished and by the beginning of 1947 only a few

* See Canada Year Book 1947, p. 920.

major subsidies were still in effect. During 1947 the removal of subsidies was accelerated to keep pace with decontrol and at the end of the year the only remaining items eligible for subsidy were oils and fats. In addition, there were in effect certain subsidies on steel paid by the Department of Reconstruction and Supply and the feed-grain freight assistance policy of the Department of Agriculture.

In January, 1947, the last of the petroleum subsidies was cancelled with the withdrawal of that on crude oil imported into the Prairie Provinces. All remaining subsidies on wool and woollens were withdrawn in January and rayon subsidies were eliminated in February. Subsidies on coal were terminated in April and at the end of that month payments on butterfat for creamery butter and on milk for cheddar cheese were discontinued. Hides and leather subsidies and those on cottons were reduced in several steps—in February, in June and finally eliminated in September. Several other important subsidies were removed in the decontrol step of Sept. 15, 1947. In October the subsidy payments on feed grains were withdrawn concurrently with the lifting of ceiling prices. Trading losses on commodities which were bulk-purchased such as cocoa, dried fruits, pepper, tin and antimony were also eliminated in 1947 by raising prices to the trade to approximate cost levels and all bulk-purchasing operations (excepting oils and fats) had ceased by the end of the year. The withdrawal of subsidy was normally accompanied by compensatory price increases either in the form of authorized increases in ceiling prices or through adjustments by the trade in cases where subsidy removal and decontrol coincided.

The combined effect on the cost of living of the removal of subsidies was necessarily substantial. A major subsidy withdrawn on Sept. 15 was the drawback payment on wheat for milling which since 1942 had been paid to millers on the basis of the difference between the current domestic price of wheat and the basic period price of 77½ cents per bu. (basis, No. 1 Northern in store at Fort William). At the time of decontrol the current domestic price was \$1.58½ per bu. On Aug. 1, 1948, the United Kingdom contract price for wheat advanced to \$2.05 per bu. In order to give the producer this price on domestically produced wheat and at the same time avoid further increases in flour and bread prices, the Government undertook to refund to flour millers the difference between the new and the former price on all wheat moving into domestic human consumption.

The subsidies on textiles were also discontinued. Those remaining on imported wool tops, yarns and fabrics were withdrawn in January, 1947. In the following month all subsidies were terminated on domestic rayon yarns and on imported rayon fibres, yarns and fabrics. The removal of cotton subsidies was a more difficult problem and a more important one from the point of view of its effect upon the textile price structure. At the beginning of 1947, the cost of raw cotton to the primary mills was being subsidized down to a level of 15.4 cents per lb. as compared with a New York market price of about double this amount. It appeared quite certain that United States cotton prices would remain considerably above the domestic subsidy base price for some time to come and consequently the Canadian cotton price structure had to face substantial readjustment.

During 1947 several steps were taken to reduce subsidy payments and bring Canadian cotton textile prices into more realistic relationships with actual costs. On Feb. 1, the subsidy base price of raw cotton was raised 9 cents per lb. In

adjusting mill prices, an additional allowance of 3.4 cents per lb. was granted the primary and knitting mills on the grounds of financial need occasioned by cost increases other than in raw material. Price adjustments on finished goods were delayed to allow for disposal of inventories subsidized on the previous basis. On June 2, the base price of raw cotton for subsidy purposes was again raised by 2.8 cents per lb., with compensatory adjustments on yarns and fabrics. At the same time the opportunity was taken to revise the domestic price structure to correct anomalies that had developed in the course of the controlled years. Other textile subsidy commitments were cut during the year by raising ceiling prices on imported cotton fabrics and by removing some types from the list of items eligible for subsidy. Finally on Sept. 15, 1947, all cotton items were removed from the list of goods eligible for import subsidy. Though ceiling prices on all remaining textile items were removed at the same time, arrangements were made to forgo the recovery of subsidy on inventories in return for an undertaking from the trade that prices would not be increased until the subsidized inventories were exhausted.

The basic imported fats and oils used in soap and shortening industries continued under subsidy though several steps toward reduction had been taken. A program was initiated early in 1947 whereby domestic subsidies on oils and fats were partially eliminated, and subsidies on imported oils and fats reduced. The first step occurred in February, 1947, and further reduction in subsidies was effected in June, 1947. Finally on Aug. 1, 1948, all subsidies and price ceilings on oils and fats were withdrawn.

Rentals and Shelter.—Rent and eviction controls underwent important changes. In the field of commercial accommodation the area of control was substantially whittled down in the early part of 1947 and all remaining regulations were removed on Mar. 8, 1948. In the case of housing accommodation, a number of important steps were made in the direction of modifying or removing controls but the process of decontrol is still in an early stage. In 1947 for the first time since rent control was imposed, general increases were authorized in the maximum rentals of both housing accommodation and commercial accommodation in return for a concession from the landlord in the form of an extension of the lease.

Housing Accommodation.—There were a number of important changes in the regulations affecting rentals of housing accommodation. In April, 1947, a measure of relief was extended to landlords of housing accommodation by authorizing a 10 p.c. increase in rentals provided the landlord was willing to give the tenant a two-year extension of the lease. The new higher rental could not become effective until the expiration of the existing lease and if a two-year extension of the lease was arranged, the landlord remained bound for the full term but the tenant could terminate the lease upon thirty days' notice. In the event that the tenant did not accept the proffered lease, the existing lease could be terminated under provincial law. In such circumstances, the accommodation still remained under rent control and the maximum rental to the succeeding tenant would be the previous maximum rental plus 10 p.c.

A further rental adjustment was allowed on special grounds. A landlord was given leave to apply to the Rentals Appraiser for a 10 p.c. increase if the tenant was sub-letting three or more rooms under more than one sub-lease, provided that the maximum rental of the accommodation had not previously been adjusted for increased wear and tear on the part of the tenant or under the previous and more circumscribed provisions for rent adjustments on sub-letting by the tenant.

The basis for the adjustment of anomalously low rentals was broadened and liberalized in April, 1947. A landlord was now permitted to apply for an increased rental on the grounds that the existing rental was lower than that generally prevailing on Oct. 11, 1941, for similar accommodation in the vicinity or in a similar residential district of the same municipality. Previously such an application would only be entertained on the grounds that the rental was lower than that prevailing for similar units of housing in the same building.

The 10 p.c. rental increase authorized in April, 1947, was not applicable to housing accommodation newly built or reconverted since Jan. 1, 1944, since maximum rentals on new buildings have been fixed on a basis which takes into account the increase in construction costs. Moreover, specific provision was made in the relevant order at this time that rentals of such accommodation completed by original construction or by structural alteration on or after Jan. 1, 1944, should be fixed at an amount which would yield a fair return based on prevailing costs of land, labour and materials. At the same time provision was made to permit a landlord who had obtained a rent fixation before Mar. 31, 1947, on such accommodation to apply to the Court of Rental Appeals for an increased rental if he felt that the established rental was not adequate on this basis.

There was a limited amount of decontrol in the rentals of housing accommodation. On June 19, 1947, both rental and eviction controls were lifted on all new houses, apartments, duplexes and other self-contained buildings completed on or after Jan. 1, 1947. Then, on Oct. 24, price control was lifted on the supplying, for a combined charge, of room and board except when less than two meals daily are served. Accommodation in holiday-resort boarding houses and hotels had been decontrolled on Mar. 1, 1947.* On Feb. 23, 1948, all rent and eviction controls were lifted on summer cottages, tourist cabins, winter chalets, ski or hunting lodges which were untenanted on that date or later became untenanted.

Provisions were made for the relief of certain landlords of housing accommodation who had incurred hardship as a result of the freezing of leases on such accommodation in July, 1945. The regulations in question had suspended the right which a landlord of housing accommodation had previously had to give the tenant notice to vacate on the grounds that he, the landlord, required the accommodation as a residence for himself or for certain members of his immediate family. In March, 1947, provision had been made to permit landlords of housing accommodation purchased between Nov. 1, 1944, and July 25, 1945, to apply for permission to recover such accommodation.† An extension of this step occurred in August, 1947. At that time provision was made for petitions from certain landlords who had purchased housing accommodation after the freezing of leases. Because of the unknown magnitude of the task and the undesirability of a sudden and disturbing flood of evictions, applications were at this time limited to persons who became owners of housing before Jan. 1, 1947. Under local commissioners, appointed at numerous centres throughout the country, many cases were heard under this procedure. In making decisions it was borne in mind that nothing would be gained by relieving the hardship of the landlord at the expense of resultant greater hardship to the tenant. In cases where the landlord's application was granted, a special order was issued by the Board requiring the landlord to refrain from selling or renting the accommodation for a period of one year.

* See Canada Year Book 1947, p. 924.

† See Canada Year Book 1947, p. 923.

Commercial Accommodation.—The decontrol of commercial accommodation was completed on Mar. 8, 1948, when all remaining regulations in this field were withdrawn.

In the early months of 1947 a number of important changes were made in the rental and eviction regulations affecting commercial accommodation including the authorization of a 25 p.c. rental increase in return for a two-year extension of the lease.* Further decontrol became effective June 19, 1947, when rent and eviction controls were lifted on several types of commercial accommodation including gasoline service stations let by refiners or distributors, automobile parking or sales lots, meeting halls and motion picture theatres. At the same time the Minister of Finance announced the eventual complete decontrol of commercial accommodation which became effective on Mar. 8, 1948. By this time freedom of bargaining already prevailed with respect to a substantial proportion of commercial accommodation, while much more was held under leases which would not expire until 1949 or even later. Rent control on all hotel accommodation was terminated on Apr. 7, 1947.

Section 1.—Wholesale and Retail Prices

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers, factory and jobbers quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and are frequently very sensitive and responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices may be strongly influenced by local conditions and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

Subsection 1.—Wholesale Prices

Historical Record of Prices.—Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval, followed by a gradual advance for a period of 16 years prior to the outbreak of war in 1914; from an average of 43·6 in 1897, the general wholesale index (1926=100) advanced without appreciable interruption to 64·4 in July, 1914. By the end of the War in November, 1918, this index had reached 132·8, and it continued upward to a post-war inflationary peak of 164·3 in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained in comparative stability. Annual averages in this interval held between a high of 102·6 for 1925 and 95·6 for 1929. For the four years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63·5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 87·6 in July, 1937, was substantially below the 1926 average. The collapse of the wheat market

* See Canada Year Book 1947, p. 923.

in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 11 points above the 1913 level. The August, 1939, index of 72.3 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the Second World War was quite different, therefore, from that which preceded the First World War. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December, 1941, followed a year in which wholesale prices had advanced 11.0 p.c. as compared with 3.1 p.c. in 1940. The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only 3.7 and 5.7 for the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure. The December, 1945, index of 103.9 was 11.1 p.c. above that for December, 1941, when price control became generally effective.

Post-War Price Movements.—The precipitous advance in United States general wholesale prices was of great concern to Canadian price-control authorities. This advance had been anticipated in July, 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. But this provided a buffer of 10 p.c. only

and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. The general wholesale price index rose from 103·6 to 112·0, an increase of 8·4 p.c. in the nineteen months between V-E Day in May, 1945, and December, 1946.

The Canadian rise accelerated in 1947 as internal controls continued to be relaxed. Towards the close of the year, however, it was necessary to tighten up import controls because of the rapidly increasing import balance requiring settlement in United States dollars. The monthly general wholesale price index advanced without interruption from 112·0 for December, 1946, to 147·3 for February, 1948. The sharp February, 1948, break in United States basic commodity markets was followed in Canada by a minor decline in the March, 1948, general wholesale index to 146·9 but following this setback prices again moved up to reach a level of 157·8 by August. The exceptionally sharp increase in the wholesale index between July and August reflected mainly the increase in the price of wheat from \$1.585 to \$2.05 per bu. (No. 1 Manitoba Northern, basis in store, Fort William/Port Arthur or Vancouver).

² Subject to revision.

Subsection 2.—Cost-of-Living Index

Purpose and Interpretation.—The Dominion Bureau of Statistics cost-of-living index measures the influence of changes in retail prices of goods and services upon the cost of a representative urban wage-earner family budget.

It should be clearly understood that the index is a measurement of price change. Many people use the term "living costs" to indicate the total cost of things they buy. Used in this sense, living costs may include different things from year to year as well as different quantities of the same things. A cost-of-living index based upon this idea would reflect the value of total purchases made by everyone. It could be measured by the total consumer expenditure item as published in the Bureau's national income and expenditure estimates.* The cost-of-living index is based upon a quite different idea. It measures changes in the cost of a family budget which includes the same amounts of the same commodities and services for considerable periods of time. It is essentially an index that measures changes in prices. Minor adjustments are necessary to take account of quality changes and to enter new specifications or new items from time to time, as is explained below. At longer intervals a completely new survey of family budgets is undertaken. A new survey was begun in October, 1948. It will provide the basis for a new cost-of-living index, which will be tied-in with the one covering the earlier period.

Each monthly figure is a percentage which compares the present dollar cost of the index budget with the cost of the same budget in a reference period. The Bureau's reference period now is the five-year interval 1935 to 1939, and the average cost of the index budget for this period is represented by 100. The comparable cost at Aug. 2, 1948, was 157·5 of its base-period cost. This figure of 157·5 becomes the cost-of-living index for Aug. 2, 1948.

Cost-of-Living Index in 1947.—An advance of 18·9 points in the official cost-of-living index during 1947 was reminiscent of price behaviour in the years 1919 and 1920. The only important wartime consumer control remaining at the end of 1947 was that on residential rents and an increase of 10 p.c. in this field had been authorized during the year. Although food prices showed the sharpest increases, clothing and home furnishings also advanced substantially, and all group indexes contributed in some measure to the change recorded. Changes in the different budget groups during 1947 were as follows:—

<i>Item</i>	<i>December, 1946</i>	<i>December, 1947</i>	<i>Point Change</i>
Food.....	146·4	178·7	+32·3
Fuel.....	109·2	120·3	+11·1
Rent.....	113·4	119·9	+ 6·5
Clothing.....	131·2	159·3	+28·1
Home furnishings.....	129·4	154·9	+25·5
Miscellaneous.....	114·1	119·8	+ 5·7
TOTAL INDEX.....	127·1	146·0	+18·9

* See National Accounts and Related Economic Statistics, Chapter XXVI.

* The vertical measurement of each bar represents the weighting of the respective component in the total cost-of-living index.

Regional Changes in Living Costs.—In 1941, the Bureau established cost-of-living indexes for eight regional cities covering the period since August, 1939. These indexes, for the cities shown in Table 3, are patterned after the official cost-of-living series for Canada and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed for each city from expenditure records of wage-earner families in the year ended Sept. 30, 1938. For the city records, August, 1939=100 is the base used instead of the five-year period 1935-39.

Regional movements in living costs since the outbreak of the Second World War have been closely comparable to movements in the Dominion index, which advanced 44.8 p.c. between August, 1939, and December, 1947. During this period increases in the eight city indexes ranged from 39.9 to 48.6 p.c.

Prices of Services.—Service costs comprise approximately 19 p.c. of the family expenditure budget used in compiling the Dominion Bureau of Statistics cost-of-living index numbers. Trends in rates for some of the more important of these services since 1941 are shown in Table 4.

4.—Index Numbers of Domestic Service Rates, 1941-47

(1935-39=100)

Item	1941	1942	1943	1944	1945	1946	1947

Hospital-room rates.....	104.3	106.0	111.0	116.0	124.1	133.2	146.7

Section 2.—Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the First and Second World Wars.

Investors Price Index Numbers of Common Stocks, 1947.—After the sharp decline in common-stock prices during the second half of 1946, markets were comparatively steady throughout 1947. A secondary decline in the spring and early summer months failed to develop to serious proportions and market averages later regained positions occupied early in the year. The behaviour of different market groups during 1947 is outlined in Table 5.

Preferred Stocks, 1947.—Although preferred stock prices showed greater resistance to depressing influences in 1946 than did common stock prices, their performance in 1947 was less satisfactory. An irregular decline dating from February carried this series down about 10 points to 148.1 for December, 1947. This compared with a 21-year peak of 161.6 in June, 1946.

Mining Stocks, 1947.—There was little net change in mining stock prices in 1947, following the sharp decline in 1946. The composite index for 27 representative issues closed the year at 86.6 which compared with a monthly peak of 89.9 reached in November and a closing 1946 level of 83.7. The gold series which stood at 74.8 for December, 1947, compared with the year's high of 80.1 for September and 70.9 for December, 1946. A corresponding index for four base metal issues was 108.5 in December, 1947, against 113.3 in February and 107.6 for December, 1946.

Section 3.—Index Numbers of Bond Yields

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond yield index constructed by the Bureau of Statistics. The relatively long period for which the record has been preserved makes this series of considerable value.

Since the First World War, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 8. This series (1935-39=100) has been computed from January, 1937, on the basis of yields computed from a 15-year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

PART I.—DOMINION, PROVINCIAL AND MUNICIPAL FINANCE

Section 1.—Combined Statistics of Public Finance for all Governments*

The purpose of this Section is to present combined statistics of public finance for all governments of Canada—Dominion, Provincial and Municipal.

Combined Debt.—The statistics of provincial and municipal debt appear in greater detail in Tables 31 and 40, respectively. The rapid growth of the combined debt during the war period 1942-45 as shown in Table 2, has been due to the fact that large increases in the Dominion debt have overshadowed considerable reductions in provincial and municipal debt. However, it should be noted that the Dominion was able to finance the War without recourse to the issue of foreign pay bonds, and that the large increase in bonds outstanding represents additions to internal rather than external debt.

* Revised under the direction of J. H. Lowther, Director, Public Finance Division, Dominion Bureau of Statistics.

1.—Composition of Total Debt of All Governments, 1945, with Totals for 1944

Combined Revenues and Expenditures.—Tables 3 and 4 present an overall picture of Dominion, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure—ordinary or capital—is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures presented in these tables are on a “net” basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings. Certain inter-governmental transfers such as the payments of the Dominion to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. These are set out separately in Tables 3 and 4 so as to show grand totals of revenue and expenditure for each level of government as well as totals excluding inter-governmental transfers.

Discrepancies between the amounts shown in Tables 3 and 4 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

3.—Combined Revenues of All Governments, 1945

NOTE.—Figures as at governmental fiscal year ends nearest Dec. 31, 1945. See text above *re* inter-governmental transfers.

Section 2.—Dominion Public Finance*

A sketch of public finance, from the French regime to the outbreak of the War of 1914-18, appears at pp. 742-743 of the 1941 Year Book, while detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book. Tax changes included in the 1945-46 and 1946-47 Budgets are given at pp. 883-884 of the 1946 edition and those included in the 1947-48 Budget at pp. 952-953 of the 1947 edition.

The 1948-49 Budget.—The Budget for the fiscal year ended Mar. 31, 1949† was presented to Parliament on May 18, 1948. The preliminary accounts for the fiscal year 1947-48 showed revenues of \$2,869,409,000 and expenditures totalling \$2,199,451,000, leaving a surplus for the year of \$669,958,000.

After taking account of the effect of proposed tax changes, a surplus of \$489,000,000 was forecast for the fiscal year 1948-49.

The principal features of the tax changes made were:—

Personal Income Tax.—An additional exemption of \$500 was granted to taxpayers of 65 years of age or over.

Corporation Tax.—The allowances and tax credits granted mining, oil and gas companies in respect of exploration and off-property drilling expenses were continued for another year.

Subsection 1.—Balance Sheets of the Government of Canada

Table 5 gives the Balance Sheets of the Government of Canada for 1943-48. On the asset side, accounts classified as *active* assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the Balance Sheets, but are set out in a special schedule. (See p. 990.)

The excess of liabilities over active assets, designated the *net debt*, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Deficit Account.

* Revised, except as otherwise indicated, under the direction of Dr. W. C. Clark, C.M.G., Deputy Minister, Department of Finance, Ottawa.

† Copies of the 1948-49 Budget may be obtained on application from the Department of Finance, Ottawa.

5.—Balance Sheets of the Government of Canada, as at Mar. 31, 1943-48

¹ Direct liabilities only. Indirect liabilities or guarantees given by the Government of Canada are dealt with in Table 26, p. 990.

Subsection 2.—Revenues and Expenditures

In the fiscal year ended Mar. 31, 1948, revenues declined by \$136,130,203 from the previous year, while expenditures fell by \$438,600,958. The surplus of revenues over expenditures for the fiscal year 1947-48 amounted to \$676,119,656.

Total revenues aggregated \$2,871,746,110, compared with \$3,007,876,313 in 1946-47. Tax revenues were \$24,414,082 higher than in the previous year, and non-tax revenues increased by \$16,901,008, but special receipts and other credits declined by \$177,445,293, due largely to smaller receipts from sales of surplus war assets.

Total expenditures were \$2,195,626,454, compared with \$2,634,227,412 in the previous year. Demobilization and reconversion expenditures continued to fall, \$634,421,026 being disbursed for this purpose in 1947-48, compared with \$1,314,798,107 in 1946-47. Ordinary expenditures increased to \$1,380,002,023 in 1947-48, and accounted for 62.9 p.e. of total expenditures during the year.

Capital expenditures and special expenditures were both higher in 1947-48 than in the previous year, with the former totalling \$15,655,975, and the latter \$63,140,746.

The increase in the Canadian National Railways deficit was chiefly responsible for the increase in expenditure on account of Government-owned enterprises, which totalled \$18,695,247 in 1947-48 compared with \$10,681,863 in 1946-47. Other charges also increased during the year largely due to a \$50,000,000 increase in the provision for losses on realization of assets.

¹ Includes a write-down of assets amounting to \$62,933,239.
on wheat marketing guarantees applicable to the fiscal year 1933-39.² Reserve against estimated losses
³ Reserve against estimated losses on wheat marketing guarantees applicable to the fiscal year 1939-40 to the extent of \$27,000,000.⁴ Includes \$25,000,000 as reserve against possible losses on assets.⁵ Includes \$13,963,218 subsidy payments on oats and barley used as feed for live stock.⁶ Includes \$75,000,000 as reserve for possible losses on assets.

11.—Per Capita Revenues and Expenditures, Years Ended Mar. 31, 1930-48

NOTE.—The years marked with an asterisk (*) are Census years; per capita figures for intercensal years are based on estimated populations, see p. 139. See Tables 6-10 for the figures of revenues and expenditures on which this table is based. Figures for the years 1868-1912, inclusive, will be found at p. 349 of the 1938 Year Book; those for 1913-29 at p. 932 of the 1945 edition.

Subsection 3.—Analysis of Revenues from Taxation

Table 13 gives a picture of the proportions of total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1936. Prior to the Second World War, and as Canada was pulling away from the depression of the early 1930's, the record showed a substantial improvement and in 1938, 96.7 p.c. of all expenditures was being met from all revenue and almost 84 p.c. from taxation revenue. Subsequently, as was to be expected, the reverse was the case. For 1948, however, revenues from taxation alone exceeded total expenditures by a substantial amount due to the maintenance of high taxation levels. This accounts for the situation shown by the figures of Table 13, where percentages of total expenditures provided from taxation and from all revenues are given as 111.68 and 130.79, respectively, for that year.

13.—Total Expenditures and the Percentages Thereof Raised by Taxation and All Revenue, Years Ended Mar. 31, 1936-48

Year	Total Expenditures	Taxation Revenue	Total Revenue	Percentages of Total Expenditures Provided from—	
				Taxation	All Revenue

¹ See text at foot of p. 975 for explanation.

As shown in Table 8, the revenues from customs and excise duties, the two most important sources prior to the First World War, amounted in 1948 to only 20 p.c. of the revenue derived from taxation and revenue from income tax formed 43 p.c. of the tax revenue.

The following analyses of taxation revenues are confined to excise duties, excise taxes and income tax revenue; customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here.

Excise Duties*

Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as existing at Oct. 1, 1948:—

1. Spirits distilled in Canada, per proof gal. \$11.00	3. Beer or Malt Liquor:—
Canadian brandy, per proof gal. \$ 9.00	Brewed in whole or part from any substance other than malt, per gal. \$ 0.45
Except Spirits as follows:—	
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal. \$ 1.50	4. Malt:—
(b) Used in a bonded manufactory for perfumes, per proof gal. \$ 1.50	(a) Produced in Canada and screened, per lb. \$ 0.16
(c) Used for chemical compositions approved by Governor in Council, per proof gal. \$ 0.15	(b) Imported, per lb. \$ 0.16
(d) Sold to licensed druggists for pharmaceutical preparations, per proof gal. \$ 1.50	5. Tobacco, Cigars and Cigarettes:—
(e) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. \$ 1.50	(a) Manufactured tobacco, per lb. \$ 0.35
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. \$ 0.30	(b) Cigarettes weighing not more than 2½ lb. per M, per M. \$ 6.00
	(c) Cigarettes, weighing more than 2½ lb. per M, per M. \$ 11.00
	(d) Canadian raw leaf tobacco, when sold for consumption, per lb. \$ 0.20

* Revised by Customs and Excise Division, Department of National Revenue.

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

Revenues from Excise Duties.—In the year ended Mar. 31, 1948, tobacco, including cigarettes, supplied about 48 p.c. of the revenue from excise duties.

14.—Gross Excise Duties Collected, Years Ended Mar. 31, 1942-48

(As shown in the Report of the Commissioner of Excise)

Item	1942	1943	1944	1945	1946	1947	1948

Totals ¹	113,258,214	143,140,155	146,966,395	157,857,270	195,281,547	205,691,375	213,798,162

¹ These totals do not agree with net excise duties as shown in Table 6, due to refunds, drawbacks and, in the case of spirits, a transfer tax being included here.

Statistics of Licences and Distillation.—As a by-product of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.

15.—Statistics of Licences and Distillation, Years Ended Mar. 31, 1942-48

¹ Classification of this figure not available.

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 35,555,059 proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.—Record amounts of spirits, malt liquor, malt and cigarettes were taken out of bond for consumption in 1948. For details see Table 16, p. 812, Chapter XX.

Excise Taxes

The statistics given in Table 17 represent gross collections by the Excise Division of the Department of National Revenue; they differ from the figures shown in Table 8 (in the column "Sales and Other Excise Taxes"), which represent net revenues received, by the amounts of the refunds shown in footnote 3 to Table 17.

17.—Excise War Taxes Collected, by Commodities and Provinces, Years Ended Mar. 31, 1942-48

(Accrued Revenue)

NOTE.—Dashes in this table indicate that there was no tax imposed on the corresponding item in the years so indicated.

¹ Includes refunds of \$10,369,721 in 1942, \$17,549,001 in 1943, \$34,342,147 in 1944, \$194,718,627 in 1945, \$114,005,355 in 1946, \$29,845,228 in 1947 and \$10,683,238 in 1948.

Income Tax

The income tax revenue shown in Table 18 represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927). The Act covers more than income tax proper, as corporation taxes are coming to be regarded in a different light from those on the income of individuals. Income tax on individuals and on corporations is treated separately in Part II of this Chapter, at pp. 1008-1014.

The tax on dividends and interest (Sect. 9B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds, and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada, and on interest received from or credited by Canadian debtors to non-residents, except in the case of Dominion or Dominion-guaranteed bonds,

and also on interest received by a non-resident parent company from a Canadian subsidiary, except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over.

18.—Collections Under the Income War Tax Act, Years Ended Mar. 31, 1934-48

(Tax and Applicable Section of the Act)

NOTE.—Figures for the years 1919-33 will be found at p. 966 of the 1947 year Book.

⁵ Includes 1942 deferred tax amounting to \$3,326,161. ⁶ Includes 1942 deferred tax amounting to \$1,308,982. ⁷ Includes 1942 deferred tax amounting to \$1,002,027 and tax on private companies amounting to \$41,972,700. ⁸ Includes 1942 deferred tax amounting to \$685,967 and tax on private companies amounting to \$12,596,108.

Subsection 4.—Subsidies and Loans to Provinces

Subsidies.—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the provinces: these are summarized as follows.

Interest on Debt Allowances.—By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the

provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces, in respect of interest on debt allowances is \$1,609,386.

Allowances for Governments and Legislatures.—Under the terms of the union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale, approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, " " 400,000.....	180,000
400,000, " " 800,000.....	190,000
800,000, " " 1,500,000.....	220,000
Over 1,500,000.....	240,000

Aggregate annual allowances presently paid under this head amount to \$1,750,000.

Allowances per Head of Population.—Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the year ended Mar. 31, 1946, amounted to \$8,779,089.

Special Grants.—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the year ended Mar. 31, 1946, amounted in the aggregate to \$2,280,880 as set forth below:—

Prince Edward Island.—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

New Brunswick.—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

Manitoba.—A special grant on the basis of population amounting at present to \$562,500 per annum.

Saskatchewan and Alberta.—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$562,500 for Alberta.

British Columbia.—A special grant amounting at present to \$100,000 per annum.

¹ See text at p. 981.
Grants" (see text following).

² Allowances in lieu of debt.

³ Does not include "Additional Special

Additional Special Grants.—Special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941.

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements. Rent will be paid in 1947 and later years in the case of the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act, 1942.

Dominion-Provincial Taxation Agreements.—The Dominion-Provincial Tax Rental Agreements Act, 1947, authorized the Federal Government to enter into Agreements with the provinces by which, in return for compensation, the Provincial Governments would agree to refrain from levying certain direct taxes for a period of five years. These Agreements are successors to the Wartime Agreements which have lapsed (see pp. 900-901 of the 1946 Year Book). By October, 1948, seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta, and British Columbia—had made new Agreements with the Dominion. The Yukon Territory had made an Agreement similar to those made by the provinces.

The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenues of the provinces, and to enable the Federal Government, along with the Provincial Governments, to carry out national policies intended to maintain high levels of employment and production.

The Agreements continue the basic provisions of the Wartime Taxation Agreements, under which the provinces and their municipalities withdrew their income taxes, corporation income taxes and corporation taxes in return for compensation from the Federal Government (pp. 900-901 of the 1946 Year Book). There are, however, some additional provisions in the new Agreements which have resulted from the negotiations carried on between the governments in 1945 and 1946 at the Dominion-Provincial Conference meetings and since the Budget offer of June, 1946. The main features of this offer which have been embodied in the Agreements are outlined at pp. 883-884 of the 1946 Year Book.

The provinces are required, under the Agreements, to refrain from levying certain direct taxes, with the exception that they are permitted to impose a corporation income tax of 5 p.c. on the income of corporations attributable to

their operations in the particular province. The revenue from this tax is to go to the individual province with a corresponding reduction in the amount of compensation paid to that province. The purpose of this provision is to assure as nearly as possible a uniform level of corporation income tax throughout Canada as between the agreeing and non-agreeing provinces. Under the Agreements it is provided, however, that a deduction will be made from the payment to the province corresponding to the amount of revenue that such a tax would have yielded even if the province does not impose the tax. The Agreements contain a set of rules by which the income of corporations is allocated to the various provinces in which they carry on business and further provide that this tax must be imposed under the same general provisions as are in the Income War Tax Act, and that it will be administered on behalf of the provinces by the Federal Government and at the expense of the Federal Government.

Another provision concerns succession duties, a field not included in the War-time Taxation Agreements. The provinces are now given the alternative of withdrawing from this field or remaining in it. If they withdraw, they receive the full amount of compensation otherwise payable under the Agreements (in the determination of which succession duties revenue was taken into account) but, if they remain, their payment is reduced by the amount of revenue loss which the Federal Government suffers, through the credit allowed against the Federal Government duty for provincial duties on the same succession. All seven of the provinces which have negotiated Agreements with the Federal Government have taken the first alternative and withdrawn from the succession duties field.*

The Agreements do not prevent the imposition of royalties and rentals on natural resources by a province since such royalties and rentals are not regarded as taxes when they are of a nature conforming with the definitions set forth in the Agreements. The imposition of taxes on income derived from logging and mining operations, as defined in the Agreements, is allowed without any deduction from the payment to the province.

The significant differences between the 1946 Budget offer and the present Agreements are as follows:—

- (1) the provinces may choose between two methods of determining the amount of their guaranteed minimum annual payments (see below);
- (2) the total guaranteed minimum annual payments to the provinces under these new methods are increased by \$25,100,000 to \$206,500,000;
- (3) these new guaranteed minimum annual payments are used as the bases for calculating the annual payments which are adjusted for increases in provincial population and gross national production per capita;
- (4) in the year following the termination of the Agreements, provincial taxpayers are to be allowed by the Federal Government tax credits of a maximum of 5 p.c. of the Federal income tax, 50 p.c. of Federal succession duties, and one-seventh of Federal corporation income tax for taxes imposed by their Provincial Governments.

The guaranteed minimum annual payments are now computed in one of two ways. Under the first option a province may elect as a base \$12.75 per capita of its 1942 population, plus 50 p.c. of its income tax and corporation tax revenue in 1940, plus statutory subsidies payable in 1947; under the second it may choose \$15 per capita of its 1942 population plus statutory subsidies payable in 1947. A special arrangement was made for Prince Edward Island which is to receive a guaranteed minimum payment of \$2,100,000. This is slightly in excess of the amount determined by either of the two formulas. The guaranteed minimum

* See Succession Duties, pp. 1015-1022.

annual payments to the provinces under the most favourable option and the estimated 1948 payments are shown in Table 21. The guaranteed minimum annual payment to the Yukon is \$89,365 and the estimated 1948 payment is \$133,161.

The actual amount payable in any one year is calculated according to the following method. The minimum payment is adjusted for changes in provincial population and gross national product per capita, as compared with the base year 1942, for each of the three calendar years immediately preceding the fiscal year of payment. These three amounts are then averaged, and the resultant is the amount payable. If, in any of the three calendar years concerned, the amount calculated is less than the amount of the minimum payment, then the amount of the minimum payment is substituted. This method of computing the annual payments ensures that the revenues of the province will increase as the provincial population and gross national product per capita increase, and at the same time guarantees that the province will, at no time in the period covered by the Agreement, receive less than the stated minimum.

21.—Guaranteed Minimum Annual Payments to Provinces¹ under Most Favourable Option and Preliminary Estimated 1948 Payments

Province and Option	Guaranteed Minimum Annual Payments	Estimated 1948 Payments
	\$'000	\$'000
Prince Edward Island.....	2,100	1,755
Nova Scotia (Second).....	10,870	10,584
New Brunswick (First).....	8,773	8,418
Manitoba (First).....	13,540	13,352
Saskatchewan (Second).....	15,291	14,062
Alberta (First).....	14,228	13,972
British Columbia (First).....	18,120	22,062
Totals.....	82,922	84,205

¹ The Governments of Quebec and Ontario have not made agreements with the Federal Government. The payments for these Provinces under the first option would be: Quebec, \$56,382,000 and \$64,112,000; Ontario, \$67,153,000 and \$75,363,000.

Under an offer ancillary to the Agreements, but which applies to all provinces, whether agreeing or not, the Federal Government will pay to the province one-half of the Federal corporation income tax on income of corporations derived from generating and/or distributing to the public, electric energy, gas or steam where this is the main business of the corporation.

Loans to Provinces.—During the fiscal years 1931-32 to 1940-41 certain loans were made by the Government of Canada to the governments of the western provinces for direct relief, agricultural relief, capital and ordinary governmental purposes. These loans were secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936.

Under the provisions of the Western Provinces Treasury Bills and Natural Resources Settlement Act, 1947, the treasury bill indebtedness of the western provinces was adjusted and refunded as at July 1, 1947. This adjustment took into account the sum of \$8,031,250 due by the Government to each of the Provinces of Alberta and Saskatchewan in respect of the full and final settlement of all or

any claims against or liabilities of the Government of Canada in respect of the administration and control by the Government of the natural resources in those Provinces before the transfer thereof to the said two Provinces. Loans for capital and ordinary governmental purposes were refunded over a period of thirty years with interest payable annually at a rate of 2½ p.c. Such loans, by provinces as at Mar. 31, 1948, were: Alberta, \$7,585,750; British Columbia, \$17,346,838; Manitoba, \$13,855,101; Saskatchewan, \$5,383,191. Loans for direct and agricultural relief under the terms of the settlement were reduced by one-half and the remaining indebtedness was to be refunded by the provinces without interest over a period of thirty years, as follows: Alberta, \$5,297,500; British Columbia, \$8,342,191; Manitoba, \$5,439,675; Saskatchewan, \$30,610,614.

As at Mar. 31, 1948, the total treasury bill indebtedness was: Alberta, \$12,883,250; British Columbia, \$25,689,029; Manitoba, \$19,294,776; Saskatchewan, \$35,993,805. An additional indebtedness as at Mar. 31, 1948, by Saskatchewan of \$8,707,469, representing outstanding loans in respect of 1938 seed grain loans guarantees, was not included in the 1947 settlement.

Subsection 5.—National Debt

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369 as against assets of \$208,394,519, leaving a net debt of \$335,996,850. This was a comparatively small debt; it was incurred almost altogether for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expanded by the subsidizing of enterprises which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, the debt was incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Federal Government funded debt payable in London, England, being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

From 1914 to 1920, the gross debt increased by almost \$2,500,000,000 to a total of \$3,042,000,000 due to heavy war and post-war expenditures, and while there was a slight reduction to a low point of \$2,544,586,411 at Mar. 31, 1930, additional expenditures during the depression years resulted in a gross debt of \$3,710,610,593 by Mar. 31, 1939.

From 1939 to 1946 there was an increase of \$15,249,235,590, incurred mainly for war purposes, bringing the total gross debt to \$18,959,846,183 at the end of March, 1946. After deduction of active assets held by the Government, the net debt showed an increase of \$10,268,846,095 during this period, amounting to \$13,421,405,409 at the end of March, 1946. At the end of March, 1948, total gross debt had been reduced to \$17,197,348,981 and net debt to \$12,371,636,893.

The portion of the funded debt payable in foreign currencies decreased steadily and sharply during the war years, as was inevitable under conditions where almost the entire amount of Canada's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1948, amounting to \$15,957,382,593, less than 1.0 p.c. was payable outside of Canada: \$9,324,772 payable in London and \$198,000,000 in New York.

22.—Summary of the Public Debt of Canada and Interest Payments Thereon, Years Ended Mar. 31, 1934-48

NOTE.—Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13, at p. 944 of the 1945 edition; and those for 1914-33 at p. 972 of the 1947 edition.

¹ Based on the official estimates of population given at p. 139.

² This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

Funded Debt Operations.—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1936 to 1946 in the respective Year Books for those years.

Treasury Bills.—During the past decade a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years ended 1934-46 appear in the respective Year Books beginning with the 1937 edition. Details of the treasury bills issued in 1945-47 are given at the end of Table 23. Details of the issues in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.

23.—Funded Debt and Treasury Bills of Canada, as at Mar. 31, 1947

NOTE.—Certain qualifications as to redemption prior to maturity govern most of these issues; they are explained fully in the "Public Accounts".

¹ Issue dated Mar. 31, 1946, sold to Bank of Canada on Apr. 15, 1946, at par and accrued interest.
² Yield at price to public 2.75 p.c.
³ In addition to the interest charge, the loan from the Export-Import Bank carries a commitment charge of ½ p.c. on the unutilized portion.
⁴ Payable in United States dollars.

Interest-Bearing Debt.—The interest-bearing debt of Canada has shown a sharp increase since 1939, amounting to \$16,632,000,000 at Mar. 31, 1948, as compared with \$3,658,000,000 on the same date of 1939. The average rate of interest on this debt continued downward during the war years, reaching the low point at Mar. 31, 1945 of 2.547 p.c. Slight increases in 1946, 1947 and 1948 were recorded, and the rate stood at 2.710 p.c. at Mar. 31, 1948. This is in contrast with the experience of the First World War, when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of 5.164 p.c. at Mar. 31, 1922.

During the fiscal year ended Mar. 31, 1939, interest on the public debt absorbed about 26 p.c. of total Government receipts. Interest on the debt now absorbs a smaller portion of revenues, amounting to 20.7 p.c. in the year ended Mar. 31, 1948.

25.—Interest-Bearing Debt, Annual Interest Charges Thereon and Average Rates of Interest, as at Mar. 31, 1934-48

NOTE.—Statistics for the years 1913-33 are given at p. 977 of the 1947 Year Book.

¹ Includes bonds purchased and held by the Treasury for sinking funds.

² Includes refundable portion of income tax and excess profits tax.

Guaranteed Debt.—Besides the direct debt of the Federal Government, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other small indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions, issued in the main for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1948, see Schedule "V" to the "Public Accounts" for 1948.

26.—Guaranteed Debt of the Federal Government (Amounts Held by the Public), as at Mar. 31, 1934-48

NOTE.—Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book; those for the years 1924-33 at p. 978 of the 1947 Year Book.

¹ Unstated advances *re* wheat marketing are not included.

² First year data recorded.

* The main item in this category is the guarantee of bank advances to the Canadian Wheat Board. Does not include indeterminate amounts and amounts not yet determined.

Section 3.—Provincial Public Finance*

In preparing this Section it has been possible to obtain from the provincial public accounts, statistics of provincial debt for 1946 as shown in Tables 31 to 34. However, since not all provinces have supplied information necessary to complete the revenue and expenditure tables for 1946, these data are available only up to 1945 as shown in Tables 27 to 30. Also the detailed classification of revenues and expenditures for 1946 differs from that followed in previous years. Statistics on the new basis will be published in the 1950 Year Book. In the meantime reference should be made to reports published by the Public Finance Division of the Dominion Bureau of Statistics.

Subsection 1.—Revenues and Expenditures of Provincial Governments

Tables 27, 28 and 29 present an over-all picture of Provincial Government finance by combining ordinary and capital account revenues and expenditures. These tables provide a more valid basis for comparison than those based on ordinary account alone because they eliminate interprovincial and inter-year incomparabilities that arise through variations from province to province, and from year to year, in the type of expenditure capitalized. Since all expenditures, ordinary or capital, are included in the combined picture, amounts provided through ordinary account for debt retirement have been excluded to avoid duplication. Sinking fund

* Revised under the direction of J. H. Lowther, Director, Public Finance Division, Dominion Bureau of Statistics. Years referred to throughout this Section are fiscal years ended nearest Dec. 31 of year stated.

earnings are not included as revenue. The tables present the *net* cost of services to the provinces after the following revenues have been offset against the corresponding expenditures: shared cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings.

During the years 1940-45 Provincial Government revenues and expenditures reached very high levels. The combined net ordinary and capital revenues in 1945 totalled \$427,000,000 as compared with the 1944 total of \$374,000,000, an increase of 14.4 p.c. The combined net ordinary and capital expenditures amounted to \$383,000,000 as compared with \$350,000,000 in 1944, an increase of 9.4 p.c. With the exception of Prince Edward Island and New Brunswick, surpluses were recorded by all provinces for 1945 and the total surplus amounted to over \$44,000,000 (\$56,000,000 in 1943 and \$24,000,000 in 1944). Included in the total expenditures were capital account expenditures of more than \$30,000,000, an increase of about 16 p.c. over such expenditures in 1944.

An examination of the details relating to both combined net ordinary and capital revenues and expenditures gives some insight into the factors contributing to the high levels reached in 1945. Liquor revenues increased over 1944 by 41.5 p.c., and gasoline tax revenues by 23.3 p.c. Increases in expenditures were chiefly accounted for by the following: highways, bridges and ferries, 22.4 p.c.; education, 13.6 p.c.; and public welfare, 12.5 p.c. It is interesting to note that debt charges, exclusive of debt retirement, decreased by 3.0 p.c.

There was only a slight change from the year 1944 in the relative importance of revenue sources. While in both years, 30 p.c. of the total net revenue was derived from taxes, 25 p.c. was from other governments (29 p.c. in 1944), and 23 p.c. from liquor control (19 p.c. in 1944).

Expenditures on specific items were also made in just about the same ratios as in 1944. Expenditures on public welfare represented 22 p.c. of the total (22 p.c. in 1944); on highways, bridges and ferries, 20 p.c. (18 p.c. in 1944); on education, 19 p.c. (18 p.c. in 1944); and on debt charges, exclusive of debt retirement, 15 p.c. (17 p.c. in 1944).

Total net combined ordinary and capital revenues in 1945 amounted to \$35.30 per capita. Chief sources of revenue were: taxes, \$10.64; other governments, \$8.83; and liquor control, \$8.23. Total net combined ordinary and capital expenditures, per capita, were \$31.62. At the same time, the more important expenditure functions in per capita terms were: public welfare, \$7.01; highways, bridges and ferries, \$6.47; education, \$5.95; and debt charges, exclusive of debt retirement, \$4.71.

It should be noted that Tables 27, 28, 29 and 30 exclude cash collected and payments and expenditures made *re* the Debt Reorganization Program of the Government of the Province of Alberta.

Further statistical details are given in the report *Financial Statistics of Provincial Governments in Canada*, published by the Dominion Bureau of Statistics.

¹ Includes expenditure on capital account, which is not separable.

² Nine months.

³ Fourteen months.

⁴ To facilitate interprovincial comparisons, the ordinary revenues and expenditures as shown in the various Public Accounts have been placed on a gross basis and certain adjustments made. For reconciliation with various Public Accounts see *Financial Statistics of Provincial Governments in Canada for 1940* and subsequent years. Statistics for the years shown below rule are for fiscal years ended nearest Dec. 31 of year stated.

⁵ Fifteen months.

⁶ Exclusive of interest paid by

Hydro and other commissions.

⁷ Five months.

⁸ Excludes \$7,136,000 in 1941, \$1,510,000 in 1943, \$16,878,000 in 1944 and \$8,000 in 1945 implementing guarantees *re* Municipalities Seed Grain and Supply Act, 1937.

⁹ Six months.

¹⁰ Excludes cash collected and payments and expenditures *re* Debt Reorganization Program.

Subsection 2.—Debt of Provincial Governments

Total direct debt of all Provincial Governments amounted to \$1,812,000,000 in 1946 which was an increase over 1945 of \$8,000,000. This increase was fairly general among the provinces, only Quebec, Manitoba and Alberta showing a decrease. Total direct and indirect debt increased moderately.

Gross bonded debt, which amounted to \$1,671,598,000 in 1946, represented an increase of \$29,935,000 over the corresponding total for 1945. This is the first year since 1940 that provincial bonded debt has increased over the previous year's total.

Provincial Government bonds sold during 1946 were, in nearly all instances, payable in Canada only. This is indicative of a trend in currency of payment that has been increasingly apparent throughout and since the war years.

31.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, 1942-46

NOTE.—Figures are as at provincial fiscal year ends nearest Dec. 31 of the years stated. Figures for 1916-30 are given at p. 887 of the 1938 Year Book; for the years 1931-40 at p. 787 of the 1942 edition; for the year 1941 at p. 984 of the 1947 Year Book.

Section 4.—Municipal Finance*

Subsection 1.—The Organization and Growth of the Municipalities in Canada

Under the provisions of the British North America Act, the several provinces have jurisdiction and control over their respective organizations of municipal government. While the main types of municipalities are common to most provinces there is little or no similarity from the standpoint of prerequisites to incorporation, either as to area or population. In fact, some provinces have no specified requirements in this regard. There are, nevertheless, two main divisions into which incorporated municipalities may be grouped—urban and rural—each of which displays more or less distinct characteristics. The former comprises the cities, towns and villages. The official designation of the municipalities in the rural group, however, varies widely as between provinces: Townships in Ontario; Districts in British Columbia; Municipal Districts in Alberta; Counties in New Brunswick; Municipalities in Nova Scotia; Parishes and Townships in Quebec; and Rural Municipalities in Manitoba and Saskatchewan.

* Revised under the direction of J. H. Lowther, Director, Public Finance Division, Dominion Bureau of Statistics.

In 1946 there were 3,970 incorporated municipalities in Canada, as compared with 3,962 in 1945. The number of each different class or type of municipality, by provinces, for 1946 is shown in Table 35.

It should be noted that the counties in Ontario and Quebec, which are incorporated municipalities, are comprised of local towns or villages and rural municipalities, situated therein, which provide the necessary funds for the service falling within the scope of county administration. There are also counties in the Provinces of Nova Scotia and New Brunswick, but these are basically the same as rural municipalities in the other provinces. In Saskatchewan and Alberta, there are areas very similar to rural municipalities except that they enjoy a lesser degree of local services and are not self-governing. These are called Improvement Districts. The Provincial Governments administer the services provided in these areas and also levy and collect the necessary taxes. A 1943 amendment to the Ontario Municipal Act provides for the erection of Improvement Districts governed by a board of trustees appointed by the Lieutenant-Governor in Council. The Local Government Districts Act, 1944, of Manitoba, authorizes the Lieutenant-Governor in Council to incorporate unorganized or disorganized territory and appoint administrators and a general supervisor.

35.—Municipalities, Classified by Provinces, 1946, with Totals for 1943-45

¹ Includes five self-governing units known as "suburban municipalities".

On the basis of the 1941 Census, over 10,689,000 persons or 93 p.c. of the population of the nine provinces, were in incorporated municipalities. Table 36, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded from the population in incorporated municipalities on this basis are comprised of those on Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt necessary or desirable.

Subsection 2.—Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only provinces at the present time in which municipalities assess and tax personal property. In Alberta in 1946 there was an increase in the use of this basis for tax revenue by villages while in Manitoba it is used generally by all classes of municipalities, except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 37. It will also be noted that income assessment, which formerly was employed in Nova Scotia and New Brunswick only, disappeared in 1943. This is a result of the operation of the Dominion-Provincial Tax Agreements whereby the provinces and municipalities abandoned the income-tax field for the duration of the War and a limited period thereafter, so as to leave it open to the Federal Treasury.

It should be noted that the figures in Table 37 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar, either in application or in effect. For instance, in British Columbia cities and municipal districts, improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or in excess of 50 p.c. of taxable values in villages; the values actually taxed in 1946 ranged from nil to 75 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented approximately 47.7 p.c. of total taxable values. It should also be noted that Table 37 does not include assessed valuations in Improvement Districts for either Saskatchewan

or Alberta. In Saskatchewan these amounted to \$29,998,740, \$28,598,170, \$27,327,995, and \$26,874,190, and in Alberta to \$69,222,473, \$61,016,330, \$63,171,742, and \$62,753,779 in 1943, 1944, 1945 and 1946, respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan, the results of which are referred to in the text following Table 37.

¹ Includes the following: N.S.—Household Tax; Que.—Miscellaneous Stock-in-Trade, Tenants Tax, *et al.*, not specified; Ont.—Income of Corporations derived from interest earnings on investments discontinued in 1944; Sask.—Special franchise; Alta.—Franchise and Other Special.

² Includes estimated values for some municipalities, also total exemptions incomplete.

³ Includes some other types of valuations not specified.

⁴ Not available from published reports.

⁵ Detail not available.

⁶ Includes temporary exemptions: \$76,494,294 (1943); \$61,283,443 (1944) and \$43,932,563 (1945).

⁷ At time of publication 1946 figures for Quebec were not available.

⁸ Does not cross-add to total; complete information for some municipalities not available.

⁹ Cities only; exemptions for other municipalities not published.

¹⁰ Cities, with exception of Drumheller; exemptions for other municipalities not published.

¹¹ Includes \$184,383,801 (1943), \$192,542,560 (1944), \$201,269,083 (1945) and \$223,651,933 (1946) valuation of improvements, the total value of which was \$412,707,744 (1943), \$435,017,282 (1944), \$433,581,311 (1945) and \$468,844,049 (1946), and the maximum value at which they could be taxed was \$257,964,422 (1943), \$274,063,507 (1944), \$271,071,473 (1945) and \$292,353,568 (1946).

¹² Consists of \$185,280,087 (1943), \$185,522,072 (1944), \$182,248,385 (1945) and \$188,328,203 (1946) valuation of exempted properties, and \$228,323,943 (1943) \$242,474,722 (1944) \$232,312,228 (1945) and \$245,192,116 (1946) exemptions of taxable improvements as referred to in footnote 11.

¹³ See footnotes 4, 6, 9, 10 and 12.

While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, showed a reduction in total valuations up to 1945. This was the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs and is "the first occasion in Canada where an assessment system of such extensive proportions has ever been undertaken".*

Subsection 3.—Municipal Taxation

Table 38 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1943, 1944, 1945 and 1946, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are not included in the municipal levies. In Prince Edward Island, two only of the eight incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Nova Scotia prior to 1943, and in New Brunswick prior to 1944, cities, towns and villages only levied and

* Annual report of the Department of Municipal Affairs of the Province of Saskatchewan for the fiscal year ended Apr. 30, 1941.

collected the school taxes. Hence the figures shown for these provinces are, generally speaking, exclusive of rural school taxes, particulars of which are not available from published reports. Commencing with 1943, however, under a program for establishing larger school units in Nova Scotia, some municipalities have been levying and collecting the school taxes for and on behalf of the rural school boards situated therein. A similar program has also been inaugurated in New Brunswick, so that more complete figures are now available as the larger school units are gradually established. Prior to 1943, the figures for Alberta were incomplete because municipal taxes did not include certain school and hospital levies, which were not collected by the municipal unit or were regarded as "trust" taxes. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will therefore be apparent from the foregoing that the figures in Table 38, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

38.—Municipal Taxation, by Provinces, 1943-46

¹ Includes estimates in some instances as actual figures are not available.

² Not reported separately. ³ Excludes \$1,266,087 in 1943, \$1,328,914 in 1944, \$1,363,007 in 1945 and \$1,366,821 in 1946 compensation through Provincial Government for loss of income tax (see pp. 1008).

⁴ Cities and towns only. ⁵ Excludes cities and towns. ⁶ At time of publication figures for Quebec were not available.

⁷ Reduction from 1943 accounted for by write-off of tax titles for city of Winnipeg. ⁸ Includes certain provincial and other special taxes (see text following this table), but excludes taxes in Improvement Districts. ⁹ See notes applying to the provinces.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using these figures as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes included in the municipal levies in these two provinces, are as follows:—

Item	1943	1944	1945	1946
	\$	\$	\$	\$
Saskatchewan—				
Public Revenue Taxes (Provincial)....	1,718,209	1,650,131	1,621,273	1,661,667
Telephone and Hail Taxes.....	1,652,003	2,208,942	2,366,483	2,106,250
Totals, Saskatchewan.....	3,370,212	3,859,073	3,987,756	3,767,917
Alberta—				
Social Services, Educational and Wild Lands Taxes (Provincial).....	983,286	1,010,475	1,033,456	1,009,951

There has been only a slow steady rise in the trend of municipal tax levies in Canada in the years 1943-46. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, due to the establishment of larger school units previously referred to in this Section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. Tax collections continued high in relation to total levies; this, in recent years, has resulted in substantial reductions in the amount of unpaid taxes outstanding although these are still relatively high in most provinces. The situation for different classes of municipalities will, of course, vary considerably. Reference has heretofore been made to the Improvement Districts in Saskatchewan and Alberta which, although not incorporated municipalities, are nevertheless maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these Districts are excluded from Table 38 but by reason of the special significance attached to them in relation to municipal organization in these provinces, and the fact that they may become incorporated, or part of existing municipalities at some future date, the corresponding information with regard to them is shown in Table 39.

³ Includes Social Services, Educational and Wild Lands Taxes (Provincial) of \$184,336.

⁴ Not reported separately.

Subsection 4.—Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. Since 1933, however, the trend has been downward.

Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; subsequently, after the outbreak of the War in 1939, the policy of deferment was continued, if not extended, to free the financial market to the needs of the Federal Government in meeting its war financing requirements. Municipalities having been denied, either voluntarily or otherwise, improvement programs for so long, will show a natural tendency to get these under way as soon as possible in correlation with master post-war plans of the Federal and Provincial Governments. Table 40 shows figures of municipal indebtedness for 1946 and includes temporary loans and other liabilities in addition to debenture debt. Table 41 shows comparative figures for 1943, 1944 and 1945. The 1942 Year Book contains at pp. 792-793, a detailed description of the basis on which the information has been compiled. Reference should be made to this, as well as to the footnotes to Table 40 in interpreting the information. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

¹ At time of publication, figures for Quebec were not available.

Available information indicates that the direct and indirect debt of municipalities continued during 1945 the decline which had been evident since 1940. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although there have also been substantial reductions in unfunded liabilities. The decreases in debenture debt are due to the factors mentioned elsewhere in this Section while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out however that debenture debt figures are intended to represent only principal unmatured. Principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. It is impossible to ascertain if this is a true statement of fact in all cases as some reports do not indicate the exact situation. The more significant items available are given in Table 42.

PART II.—DEVELOPMENTS IN THE TAXATION FIELD

Prior to the First World War, the Federal Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue but these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Federal Government. To-day, direct taxation accounts for about 46 p.c. of Federal revenue.

The unprecedented financial demands of the First World War began to be felt by 1915 and between 1915 and 1917 the Federal Government entered the direct-taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and continued to be an important source of revenue in the period between the two wars. The outbreak of war in 1939 and the resulting rapid expansion of expenditures by the Government led to a very substantial increase in individual and corporation income tax rates, the tax on excess profits was revived and made much more severe and the Federal Government entered the fields of succession duties and gasoline taxes (the latter are semi-direct) which had hitherto been imposed exclusively by the provinces.

The first reductions to be made in direct tax rates, which were at such high levels during the war years, were presented in the 1945-46 Budget and included: a reduction of 4 p.c. in individual income tax for 1945 and of 16 p.c. for 1946; reduction of the 100 p.c. rates of excess profits tax to 60 p.c. from Jan. 1, 1946; and an increase in the minimum standard profit under excess profits tax from \$5,000 to \$15,000 from Jan. 1, 1946.

The 1946-47 Budget introduced a new tax structure for individual taxpayers effective on Jan. 1, 1947. The tax rates were lowered and the exemption levels were raised to \$750 for single persons and \$1,500 for married persons. The excess

profits tax on individuals in business was eliminated and corporation tax rates were revised in such a way that the minimum Federal tax was reduced from 40 p.c. to 30 p.c. and the maximum from 60 p.c. to 45 p.c. A provincial corporation tax of 5 p.c. became collectable by the Federal Government in those provinces that entered into Dominion-Provincial Tax Agreements.

The 1947-48 Budget included further tax reductions in both the individual and corporation fields. Effective July 1, 1947, the rates of individual income tax were lowered for all ranges of income; the reduction amounted to 54 p.c. in the lowest levels of income and tapered down to 6 p.c. or 7 p.c. at the highest levels. Over a wide range of the so-called middle income brackets, the reduction was, on the average, 29 p.c. In the corporate field, the excess profits tax was eliminated as of Jan. 1, 1948.

In the 1948-49 Budget there were only minor changes in the individual and corporation tax provisions and no changes in basic rates. However, the exemption for Federal succession duties was raised from \$5,000 to \$50,000.

The place that direct taxation has assumed in the general taxation picture and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear. (See Table 6, p. 967.)

In order to present a clearer picture of the main elements of direct or semi-direct taxation, Part II has been divided into three Sections, dealing with income tax, gasoline taxes and succession duties, respectively.

Section 1.—Income Tax*

The income tax was instituted in 1917, as a part of what was known as war-tax revenue. Before the outbreak of the Second World War it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation: in theory its incidence is admittedly fair and just, and the experience and machinery for the collection of this tax has been built up over a long period of years. The War, with its increased burden of taxation which, in turn, has made necessary the prepayment of taxes on a "pay-as-you-go" basis, has necessitated changes in the presentation of the statistics. Previously, comparisons for individuals between income assessed and tax paid were subject to the important qualification that, while the *income assessed* related to the net income upon which assessments had been approved for the year designated although the income itself was earned two years previously, the figures of *tax paid* included arrears of taxes that were assessed in previous years

* Revised by M. F. Sprott, Chief Statistician, Taxation Division. More detailed information is given in the annual report "Taxation Statistics" published by the Taxation Division, Department of National Revenue, Ottawa.

and even prepayments of taxes not due in the year under review. Under the present system, large sums of money are being collected month by month from individuals or their employers during the taxation year to which they apply. Analyses of *taxes paid* have not the same significance now as formerly except as indicating the trend of general collections: analyses of taxes *assessed for the taxation year* have now more significance. On the new basis the statistics are related to the year in which the income is earned by the taxpayer and all incomes earned in a particular year will be combined to form the taxation-year statistics for that year regardless of when the assessments are made by the Department.

Subsection 1.—Collection Statistics

Collections on a Fiscal-Year Basis.—Collection statistics are gathered by the accounting section at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the “pay-as-you-go” system which results in collecting tax substantially during the year in which the income is earned and, on the average, about ten months prior to the actual filing of an income tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income tax return which is filed by the taxpayer many months after the payment of his tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 1 represent annual collections on a Government fiscal-year basis.

1.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1934-48

NOTE.—Figures for the years 1917-33 will be found at pp. 999-1000 of the 1947 Year Book.

¹ Including refundable portion and therefore does not agree with Table 8, p. 971.

Collections on a Taxation-Year Basis.—Table 1 reflects the total taxes collected during a Government fiscal year without regard to which particular taxation years the revenues applied. In Table 2 the collection of the more important taxes are rearranged in order to reveal the revenues received for the account of each succeeding taxation year.

A taxation year is a period of time during which income is received and becomes subject to tax at rates laid down in the Act. In the case of an individual, the taxation year is almost always the calendar year. In the case of a corporation the taxation year is the calendar year in which the company's fiscal period ends. Under the present system of collection, a substantial portion of the taxes is collected during the year in which the income is earned, that is to say, during the taxation year, and the balance is collected almost entirely in the two following years.

The general Head Office account for a taxation year is held open for statistical purposes for a period of three years. Thereafter, any taxes collected for a "closed" year are credited to a "Combined Years Account". As of Mar. 31, 1948, general Head Office accounts were open for the taxation years 1948, 1947 and 1946 and the Combined Account was known as 1917-45. All collections in the Combined Account are, in Table 2, credited to the last year in the Combined Account which in this case is 1945. The collections received in the Combined Account are relatively small and as each taxation year eventually receives the "combined" revenues for a twelve-month period it is not believed that this procedure materially affects the comparative table and it has the advantage of permanently closing off a taxation year for general statistical purposes. It is not to be understood from the foregoing description that the account of an individual taxpayer is closed off for any taxation year until full payment is received.

Table 2 distributes the collections from individual and corporation income and excess profits tax on a taxation-year basis.

2.—Individual and Corporation Income and Excess Profits Tax Collections by Taxation Years, 1934-48

NOTE.—Figures for the years 1917-33 will be found at p. 1001 of the 1947 Year Book.

Taxation Year	Income Tax		Excess Profits Tax		Total
	Individuals	Corporations	Individuals	Corporations

1948 ¹	70,003,930	24,324,064	—	6,237,256	100,565,250

¹ The accounts for these taxation years are not yet closed and the figures are therefore not complete; there will be a small change in the 1946 account and substantial additions to the 1947 and 1948 accounts.

Subsection 2.—Individual Income Tax Statistics

As stated on p. 1010, individual income tax statistics are henceforth to be presented on a taxation-year or calendar-year basis. Individual statistics for the 1946 taxation year are summarized in Table 4. These figures are taken from tax returns as declared by the taxpayer prior to any changes that may later be made after scrutiny by the assessing branch.

3.—Taxpayers and Assessments by Occupational Classes and Provinces, Taxation Year 1946

NOTE.—The income used in this table is "taxable income" arrived at after deducting charitable donations but before deduction of specific exemptions for single or married status or for dependents.

Grand Totals	2,353,122	4,810,396	647,711	275

Subsection 3.—Corporation Income Tax Statistics

In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data has been extracted and compiled from the returns shortly after they have been filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec, which is caused by the fact that many large companies which operate across Canada file their returns in one or other of these two provinces.

5.—Summary Statistics for Corporations Reporting a Profit, Taxation Year 1946

Section 2.—Gasoline Taxes

The provincial gasoline taxes can be termed "direct taxes" only because the consumer knows exactly the amount of tax he is paying when purchasing gasoline. These taxes have been brought together in this Section on account of the large number of Canadian motorists who are directly affected, while the non-motoring portion of the population is affected by the effect of higher gasoline taxes on delivery costs and bus transportation.

The Federal Government, in the Third War Budget of Apr. 29, 1941, imposed a tax of 3 cents per gallon on gasoline. Proceeds from this tax are given in Table 6, p. 967. The Federal gasoline tax was repealed as of Apr. 1, 1947.

The present provincial rates of gasoline tax, per gallon, are: Prince Edward Island, 13 cents; Nova Scotia, 13 cents; New Brunswick, 13 cents; Quebec, 11 cents; Ontario, 11 cents; Manitoba, 9 cents; Saskatchewan, 10 cents; Alberta, 9 cents; British Columbia, 10 cents; Yukon, 3 cents.

There are certain refunds and exemptions allowed by the various taxing authorities and these are set out in the Bureau's publication "The Motor Vehicle in Canada".*

7.—Federal and Provincial Government Receipts from Gasoline Taxes, Nearest Fiscal Years 1940-46¹

NOTE.—For statistics of gallonage on which these taxes are levied, see p. 714. For periods covered by fiscal years, see headnote to Table 8, p. 1017. Figures for 1923-34 are given at p. 978 of the 1945 Year Book, for 1935-39 at p. 1006 of the 1947 edition.

Section 3.—Succession Duties†

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces on the following dates: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 8 shows the receipts from this source from 1921.

* Obtainable from the Dominion Statistician, Ottawa, Ont., price 25 cents.

† Revised under the direction of Dr. A. K. Eaton, Assistant Deputy Minister, Department of Finance, Ottawa.

In 1947 seven provinces withdrew from the succession duties field as part of general agreements for the removal of duplication of direct taxation, negotiated with the Federal Government. These agreements succeeded the expiring Wartime Tax Agreements, and followed the general terms of the offer set out in the Budget Speech of June 27, 1946. This offer was drawn up in such terms that any province could elect either to enter or not to enter into an agreement with the Federal Government and, in respect of succession duties, provided that even a province that did enter into an agreement could, if it wished, retain its own levies. As previously mentioned, seven of the nine provinces, namely, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia, accepted this offer and elected to repeal their own succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. For this period, therefore, provincial succession duties will be limited to those provinces which have not accepted the Federal Government offer before the period expires.

The Federal Government provided in the 1946 Budget that, as from Jan. 1, 1947, the rates of Federal duty would be doubled, and that where a provincial levy was continued a credit would be allowed against one-half of the Federal duty for duty paid to a province. The existing situation, therefore, is that in provinces that have withdrawn their duties the previous combination of Federal and provincial rates has been supplemented by a single Federal duty at double the previous Federal level, which in most cases results in the continuation of a total duty approximately the same as previously levied under the two duties combined. On the other hand, in the provinces that have not withdrawn their duties, the doubled rates of Federal duty apply but may be reduced up to one-half by a credit for the duty paid to the province.

The Dominion Succession Duty Act was enacted as c. 14 of the session of 1940-41. Certain amendments were made to the Act by c. 25 of 1942; c. 37 of 1944; c. 18 of 1945; and the doubling of rates and provision of the tax credit mentioned above by c. 46 of the Statutes of 1946. Two important amendments were made to the Act in 1948. The former provision by which bequests to non-profit charitable organizations in Canada were exempt only up to 50 p.c. of the aggregate net value of the estate, was changed to remove this limit entirely. A second change exempted from duty all successions derived from an estate of an aggregate net value not exceeding \$50,000: formerly this exemption had applied only up to an aggregate net value of \$5,000. While estates in excess of \$50,000 remain dutiable in full; it was provided at the same time that in no case would the duty reduce the value of the estate below \$50,000.

Revenue from the Federal duty is given in Table 8.

A common feature of both Federal and Provincial duties is the variation of rates by the degree of relationship of the beneficiary to the deceased. The four classes of beneficiaries that are established under Federal law (see p. 1018) have, for example, specific rates that change with each classification, while in Ontario there are three classes of beneficiary with different rates of duty attached to each class. It is also a common feature of both Federal and Provincial Acts for an initial rate of duty to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Federal Government, a person who receives a bequest of \$50,000, say, out of an estate of \$500,000 is charged the rate for a \$500,000 estate plus an additional rate for \$50,000, and the total rate is then applied in calculating the tax on his bequest of \$50,000.

Double taxation of estates resulting from taxation of the same property by more than one province has been common in the past, but the withdrawal of seven of the provinces from the field will considerably reduce this problem. In the international field, dual taxation has been dealt with by way of tax conventions. Such a tax convention between Canada and the United States was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada or of the provinces or territories of Canada shall be deemed to be property situated within Canada.

An agreement respecting succession duties between Canada and the United Kingdom was also signed June 5, 1946.

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of Federal and provincial duties is realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general knowledge of the incidence of succession duties in Canada under conditions existing at present.

8.—Federal and Provincial Net Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-47

NOTE.—The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31 to 1942 and thereafter Mar. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 thereafter; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Man. Mar. 31 after 1946; Alta. and B.C., Mar. 31.

¹¹ Fifteen months.

¹² Eleven months.

Federal Duty.—Beneficiaries are divided into four classes, as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$50,000, or on bequests up to \$1,000 to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war services nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside of Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to \$20,000, dependent children to \$5,000 each and, in cases where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to the number of them and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime are exempt if the transfer was carried out more than three years prior to the death of the deceased and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income War Tax Act has been paid in connection with the transfer made by a deceased person during his life-time then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 9.

9. — The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates

Class	Aggregate Net Value	Dutiable Value	Rate	Duty

	1,000,000	1,000,000	44.70	447,000

The Incidence of Combined Federal and Provincial Succession Duties.—

Under the new tax agreements outlined at p. 1016, only the Provinces of Quebec and Ontario, which have not entered the agreement, have retained their own succession duties. As mentioned above, the other seven provinces elected to repeal their succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. As a consequence, the tables showing combined rates of Federal and provincial duty for each province, which appeared at pp. 942-950 of the 1946 Year Book, have been dropped with the exception of those for the two above-mentioned provinces. The new condition of doubled Federal duties and a tax credit up to 50 p.c. for the provincial duty has been taken into account in Tables 10 and 11. The rates under the heading "Dominion Duty" shown in the 1946 Year Book have been doubled and under "Combined Duty" the greater of (1) the amount of the Federal duty (doubled rates), or (2) the provincial duty plus one-half the Federal duty, is given.

In these two tables, the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only, since it would be impossible to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the respective provinces. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

Quebec.—The current legislation under which succession duties are collected is c. 18 of 1943. As stated at p. 1017, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other Provinces. Full details regarding other cases may be obtained from the Act quoted or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:—

- (1) Those in direct ascending or descending line between consort, between father- or mother-in-law, and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000. This sum is increased by \$1,000 for each child who has survived or has left surviving descendants. No duty is payable on bequests up to \$1,000 to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. No duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the Province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws.

10.—The Incidence of Federal and Quebec Succession Duties on Typical Estates

Class	Aggregate Net Value	Federal Duty ¹			Provincial Duty			Combined Duties ¹

¹ The rates of Federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the provinces, see p. 1016. ² Includes a surtax of 15 p.c. ³ Includes surtax on provincial duty. ⁴ Includes a surtax of 20 p.c. ⁵ Includes a surtax of 25 p.c.

Ontario.—The current legislation on succession duties is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$25,000 devised to persons in Class (1), nor on those not exceeding \$10,000 devised to persons in Class (2). Where the aggregate value of an estate does not exceed \$25,000 the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in Class (2) where the aggregate value does not exceed \$10,000. Where the aggregate value does not exceed \$5,000, the estate will be exempt from duty regardless of what class or classes of persons inherit.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty shall be payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits however, while exempt, are nevertheless taken in as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious, charitable or educational purposes to any religious charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate which are not exempt. The same rule applies to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

PART I.—CURRENCY AND BANKING

Section 1.—Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

(1) *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

(2) *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

(3) *The Central Gold Reserves*, established by the Bank Act of 1913.

(4) *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

Section 2.—The Bank of Canada

Subsection 1.—The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of $4\frac{1}{2}$ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity; short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Federal or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 1028.

The Bank of Canada Act (c. 43, Statutes of 1934 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended; this suspension was continued under the Foreign Exchange Control Act, 1946. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of \$27,734,444 to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with, and notes of, the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. In 1948 there were eleven directors. In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

Subsection 3.—Bank of Canada Operations

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets since April, 1938, have

been (a) the rise in investments, partly to replace the gold and foreign-exchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and (b) the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

¹ The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

Subsection 4.—The Industrial Development Bank

The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors and Assistant Deputy Governor of the Bank of Canada. The \$25,000,000 capital stock of the Bank, now completely paid up, was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Authorized and outstanding loans of the Industrial Development Bank as of Mar. 31, 1948, are classified by provinces, size of loans and industries in Table 2. The monthly statement of assets and liabilities of the Bank for June 30, 1948, showed outstanding loans and investments at that date of \$15,985,285.

Section 3.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue any notes after Jan. 1, 1945, and after Jan. 1, 1950, the chartered banks' liability for such of their notes which then remain outstanding will be transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

As a result of the changes indicated above, current data on bank-note circulation are not comparable with those of earlier years though statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion or Bank of Canada notes, exclusive of those held by the banks as reserves.

Since 1935 there has been little change in the circulation of denominations under \$5. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. This is apparent from a study of the accompanying tables.

3.—Denominations of Bank of Canada, Dominion and Other Notes in Circulation for Certain Years, 1926-47

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

⁵ Gross note circulation only; notes of other chartered banks not available.

Coinage.*—The present monetary standard of Canada is gold of 900 millesimal fineness (23.22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and half-sovereign, and United States eagle, half-eagle and double eagle are legal tender. Subsidiary coin consists of \$1, and 50-, 25- and 10-cent silver pieces,† 5-cent nickel and 1-cent bronze pieces. Subsidiary silver coin is legal tender to the

* Revised by the Royal Canadian Mint, Ottawa.

† The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece. In 1942 a new 5-cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5-cent coin composed of mild steel with a chromium finish. The current coin is pure nickel.

amount of ten dollars. The 5-cent piece is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

5.—Circulation of Canadian Coin as at Dec. 31, 1938-47

NOTE.—The figures are of net issues of coin. Figures for the years 1901-25 are given at p. 858 of the 1927-28 Year Book and for 1926-37 at p. 956 of the 1946 edition. Per capita figures are based on estimates of population as given at p. 139.

The Royal Canadian Mint.—The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, Ltd., England. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914, small quantities of gold bullion were refined, but during the War of 1914-18 the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 fine oz. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

Subsection 2.—Money Supply

During 1947 the Bank of Canada developed a presentation of statistics concerning money supply and related bank assets which differs in several important respects from the table presented in previous issues of the Canada Year Book. It is believed that the new series provides a better approach to the problem of measuring changes in the volume of money under present-day conditions though, unfortunately, the Bank of Canada series has been carried back to 1938 only, whereas the former Dominion Bureau of Statistics series was available from 1919 (see pp. 1022-1023 of the 1947 Year Book).

In measuring the volume of money it is necessary to decide which categories of bank deposits should be classed as "money" and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings such as Government bonds. Generally, it has been satisfactory to classify bank deposits as money if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this has always posed an awkward problem when trying to assemble volume of money statistics. To omit all savings deposits of chartered banks would ignore the obvious fact that for many people a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits at the present time.

It is therefore felt that a more realistic picture of monetary developments in Canada—and one more comparable with the usual presentation of similar statistics in other countries—is obtained by omitting the minimum quarterly balances in

personal savings deposits and non-personal notice deposits, from volume-of-money statistics. It has seemed preferable to exclude these deposits from the volume of money on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in "float" there is therefore duplication in the figures of bank deposits. In Table 7 "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics is concerned. In most cases the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Federal Government deposits from the Canadian money supply figures.

¹ Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks.

² Demand and notice deposits; deposits of Provincial Governments, United Kingdom and foreign banks; less float deposits, that is, cheques on banks as shown in month-end returns.

³ Excludes Federal Government, chartered bank and foreign deposits.

Section 4.—Monetary Reserves

Subsection 1.—Bank of Canada Reserves

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the current market price of gold. The new data are to be found under the item "Reserves" in the "Assets" section of Table 1, p. 1026. As explained in the footnote to that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

Subsection 2.—Chartered Bank Canadian Cash Reserves

Before the Establishment of the Bank of Canada.—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes; partly of gold coin and bullion, and subsidiary coin, including these forms of cash

held by the banks themselves, and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

Since the Establishment of the Bank of Canada.—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank, except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1, p. 1033.

8.—Annual Averages of Cash Reserves of the Chartered Banks, 1938-47

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves include notes and deposits with the Bank of Canada. Figures for the years 1926-37 are given at p. 960 of the 1946 Year Book.

Section 5.—Commercial Banking

Subsection 1.—Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies from Confederation; the last insolvency occurred in 1923.

A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given at pp. 961-962 of the 1946 Year Book.

Subsection 2.—Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, "other assets" being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve

funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The chart below showing the division of ownership of assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Federal and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

PERCENTAGE DISTRIBUTION OF LIABILITIES TO ASSETS

9.—Development of Chartered Banking Business in Canada, 1933-47

NOTE.—These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for the years 1867-1880 will be found at pp. 918-919 of the 1938 Year Book; for the years 1881-1915 at pp. 815-816 of the 1941 edition; for the years 1916-26 at pp. 963-964 of the 1946 edition; for the years 1927-32 at pp. 1025-1026 of the 1947 edition.

¹ Since 1946 the end of the accounting year has been Sept. 30.

Cheque Payments.—The great bulk of monetary transfers in Canada is made through the banks, payments in notes and coin being of relatively minor importance. It is estimated that about 80 p.c. of all business transactions are financed by cheque and the amount of the cheques paid through the banks and charged to deposit accounts is thus a fairly accurate measurement of the volume of business transacted in a given period.

Reflecting more prosperous conditions in 1947, the amount of business transacted in the form of cheques cashed rose considerably over the preceding year. The increase was relatively greater than that of 1946 when the temporary reaction in productive activity had a limiting effect on the advance. The gain of 7.6 p.c. in 1947 compared with 1946 established a new high position; wholesale prices as well as the higher level of industrial production accounted for the increase, which was general in the five economic areas. The greatest relative increase was achieved in British Columbia where business activity expanded rapidly after the end of the War. Ontario and the Prairie Provinces showed gains in 1947 following recessions in the previous year, and Quebec and the Maritimes showed a continuance of the steady advances recorded in those areas since 1940.

The post-depression advance in bank debits reached its peak in 1936, followed by a reaction in 1937 and 1938. The increase in cheques cashed during the war and post-war years was extraordinary, nine consecutive advances being recorded between 1939 and 1947 for a cumulative advance which amounted to almost 141 p.c.

Subsection 3.—Statistics of Individual Chartered Banks

Assets and Liabilities.—Cash reserves against deposits as shown in Table 16 for the years 1944-47 comprise the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. Before the establishment of the Bank of Canada in 1935, the figures comprised the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserve not required against their note issues.

16.—Principal and Total Assets of Individual Chartered Banks, 1944-47

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year. Figures for earlier years will be found in the corresponding table in previous Year Books.

Earnings of Chartered Banks.—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

Branches of Chartered Banks.—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1933, and in Table 19, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing of some unprofitable branches, and also from contractions brought about by war-time conditions. By Dec. 31, 1947, the total had increased to 3,323 (excluding 136 branches and four sub-agencies outside Canada).

Section 6.—Government and Other Savings Banks

There are three distinct types of savings bank in Canada in addition to the savings departments of the chartered banks and of trust and loan companies. First there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Federal Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Economie de Québec, established under Federal legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Federal Government Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years, the amalgamation being completed in March, 1929.

22.—Financial Business of the Post Office Savings Bank, as at Mar. 31, 1942-47

NOTE.—Figures of total deposits for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book and for 1918-41 at p. 978 of the 1946 edition.

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta. A similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and in March, 1922, the first branches were opened. Interest at the rate of 1 and $1\frac{1}{2}$ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Mar. 31, 1948, were \$63,489,000, and the number of depositors at that date was approximately 100,000. Twenty-two branches are in operation throughout the Province.

Alberta.—In Alberta, the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at $1\frac{1}{2}$ p.c., or term certificates for one, two, three, four or five years, in denominations of \$25 and upwards, bearing

interest at 2 p.c. for one or two years, $2\frac{1}{2}$ p.c. for three or four years and $2\frac{1}{2}$ p.c. for five years. The total amount in savings certificates on Dec. 31, 1947, was \$1,029,477 made up of \$204,137 in demand certificates and \$825,340 in term certificates.

In addition, savings deposits are accepted at 44 Provincial Treasury Branches throughout the Province. The total of these deposits at Dec. 31, 1947, was \$12,044,252 made up of \$8,036,003 bearing interest at $\frac{1}{2}$ of 1 p.c. to $1\frac{1}{2}$ p.c. and payable on demand, and \$4,008,249 bearing interest at 1 p.c. to 2 p.c. and payable one year after deposit.

Penny Banks.—Provision was made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. The only bank established under this statute was the Penny Bank of Ontario but its operations were suspended in February, 1943, in order that the school children might concentrate on the purchase of War Savings Stamps and Certificates. At the end of April, 1948, a measure was introduced in the Federal Legislature to provide for the winding-up of the Bank and the repeal of the Penny Bank Act.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1948, a paid-up capital and reserve of \$6,000,000, savings deposits of \$147,837,937, and total liabilities of \$155,013,575. Total assets amounted to \$154,955,395, including about \$125,000,000 of Federal, provincial and municipal securities. La Banque d'Economie de Québec, founded in 1848 (as La Caisse d'Economie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Mar. 31, 1948, savings deposits of \$22,265,849, a paid-up capital and reserve of \$3,000,000, and total assets of \$26,856,548.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Economie de Québec for the years ended Mar. 31, 1934-48.

23.—Deposits in the Montreal City and District Savings Bank and La Banque d'Economie de Québec, Years Ended Mar. 31, 1934-48

NOTE.—Figures for the years 1868-1926 appear at pp. 833-834 of the 1926 Year Book; for the years 1927-33 at p. 980 of the 1946 edition.

Credit Unions.*—The idea of co-operative credit was introduced in North America in 1900 when Alphonse Desjardins established the first "People's Bank" or "Caisse Populaire" at Lévis in the Province of Quebec. In this Province the credit union movement is strongest and in 1947 there were 1,030 such groups operating. Some credit unions were organized in Ontario shortly after the first Quebec groups were organized, but not until 1922 was there any legislation in

* Prepared by J. E. O'Meara, Economics Division, Department of Agriculture, Ottawa.

Ontario providing for their incorporation. Credit unions were unknown in other provinces until they were organized and sanctioned by legislation in Nova Scotia in 1935. From that year on the idea spread quite rapidly to all the provinces, and by 1939 all Provincial Governments had enacted legislation providing for the incorporation or registration of credit unions.

Since 1940 the number of credit unions in Canada has increased by 1,379. Membership has increased by over 500,000 and total assets by almost \$200,000,000. As yet there is little indication of any falling off in the rate of increase in members and assets although in most provinces the number of new credit unions seems to be slowing down. The particularly rapid increase in assets has resulted in an advance in the average share investment and average equity in assets per member. Strengthening of the financial and membership figures seems to be continuing in every province.

Total deposits at the end of 1947 were about \$175,000,000 compared with \$151,000,000 in 1946. Total assets in 1947 were about \$220,500,000 which is an increase of approximately \$33,000,000 over 1946. Membership also continued to increase until in 1947 there were over 775,100 members in Canada compared with 688,600 reported in 1946.

In 1946 Prince Edward Island reported having lent nearly \$1,500,000 in the ten years since the first credit union was organized. Uncollectable loans charged off amounted to \$1,041, a loss of one-fourteenth of one per cent. Ontario experienced a sharp rise in the amount of bad loans written off, but this was attributed to a

closing out of long-standing uncollectable loans. New Brunswick reported loans written off since inception of \$2,116, or one-fortieth of one per cent of a total of over \$8,000,000. Manitoba credit unions wrote off \$1,143 in uncollectable loans, a sharp increase over 1945. British Columbia reported 17 loans written off to the amount of \$426. Other provinces report small losses over the years.

Leagues and Federations.—In every province of Canada, credit unions are organized into groups known as federations or leagues. Quebec has two federations and one league. In 1946 there was incorporated in Ontario a regional league known as La Fédération des Caisses Populaires Ottawa et Districts, Limitée, and in 1947 another regional league located in the north-eastern part of the Province was incorporated. These organizations are in addition to the already established Ontario Credit Union League, Limited.

During 1946 the legislature of New Brunswick passed an Act respecting the incorporation of credit union federations which is to be known as the Credit Union Federations Act.

Mainly, the objects of these leagues and federations are to encourage and assist in educational and advisory work regarding credit unions, to assist in management, bookkeeping and accounting and to arrange for group bonding and the purchase of supplies. In some provinces magazines or newspapers have been established to assist in carrying out these objectives. Among these are the *Revue Desjardins* in Quebec, *The Ontario Credit Union News* in Ontario, *The Credit Union Way* in Saskatchewan and the *B.C. Credit Unionist* in the coast province. Bookkeeping manuals have been prepared and published in some provinces and have proven of great assistance in uniform operation and accounting and simplified to some extent the work of the supervisors and inspectors.

Some leagues operate a central loan department where credit unions—and in some provinces, co-operative associations—may deposit surplus funds to be lent to other credit unions or co-operatives.

In British Columbia a central credit union is incorporated under the Credit Unions Act. In Alberta the League operates a Deposit and Loan Department, and is planning a central credit union as a result of certain amendments to existing legislation.

Saskatchewan operates a central credit union known as the Saskatchewan Co-operative Credit Society, Limited. In 1946 this society, whose membership is open to credit unions and co-operative associations, reported 253 members, assets of \$1,755,733 and loans of \$4,546,000.

Manitoba has a central credit union in connection with the provincial federation and these two bodies have a joint manager.

The Ontario Credit Union League operates a central credit department. The new federations in Ontario are permitted to receive moneys from and make loans to member credit unions.

Because of the large number of credit unions or caisses populaires operating in the Province of Quebec there are eight regional credit unions in the province with assets of over \$21,000,000 in 1947. They are situated at Three Rivers, Quebec, Gaspé, Montreal, Sherbrooke, Rimouski, Western Quebec and Joliette. The Montreal Federation of Caisses Desjardins also has a caisse centrale and reported total assets of nearly \$500,000 in 1947. The Quebec Credit Union League

comprises the English-speaking credit unions on the Island of Montreal and has the power to do loan business with its member credit unions, though it has not done so as yet.

During 1946 the league in New Brunswick was in the process of reorganization as a result of the new Credit Union Federations Act and accordingly was not very active.

The Prince Edward Island Credit Union League, Limited, is also authorized to establish a share and loan department in which any credit union or incorporated co-operative association may be admitted to membership.

In Nova Scotia the League has the power to receive moneys on deposit from credit unions and to make loans to members. Thus the league operates a Deposit and Loan Department which reported assets at Nov. 30, 1946, of \$634,935.

Through their affiliation with the Credit Union National Association in the United States (see International Developments below) many credit unions in Canada insure their savings and loans. Bonding of treasurers is also available.

In Quebec, through the *Fédération des Caisses Populaires Desjardins*, loans to members are insured if the individual *caisse* so desires. Bonding of treasurers has been in effect for some time and lately "*La Société d'Assurance des Caisses Populaires*" has bonded managers and also insured the *caisses* against theft or burglary and also fire.

International Developments.—Most provincial leagues are affiliated with the Credit Union National Association (CUNA), in the United States. This Association maintains a Canadian office at Hamilton, Ont., to look after savings and loan insurance of affiliated credit unions. The Canadian Credit Union Federation was dissolved in May, 1947, mainly because it was felt that this Federation was a duplication of CUNA services and also a duplication of the services of the Co-operative Union of Canada to which many leagues belong through membership in their own provincial Co-operative Union.

Developments in 1946.—During the year 1946 an arrangement was made in Prince Edward Island whereby the Provincial Government passed over to the Provincial Credit Union League the responsibility for the administration, inspection and general supervision of credit unions in the Province. A similar agreement exists in the Province of Quebec whereby federations organized under Sect. 49 of the *Syndicates Act* have the responsibility for promotion and general supervision of the individual *caisses* belonging to the federations or leagues.

Credit unions were incorporated under a Section of the Companies Act but on May 15, 1946, a new Credit Union Act came into force in Manitoba. Under the new Act the main amendment concerned the disposition of earnings. Credit unions now file their annual returns with the Supervisor of Credit Unions instead of with the Provincial Secretary.

During 1947 preliminary study of the possibility of the organization of a credit union on a national basis was begun. The main idea is to organize a national co-operative credit society which would act as a central credit union for the various provincial credit societies. A committee of the Co-operative Union of Canada is conducting the preliminary work and two provinces which now have loan departments of their leagues are planning to incorporate these loan departments as separate central credit unions.

Section 7.—Foreign Exchange

Subsection 1.—Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the First World War. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the First World War, both the pound sterling and the Canadian dollar were removed from the gold standard, and fell to a discount in New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

The 1942 Year Book at pp. 829-830 deals with the pre-war position of Canadian exchange from September, 1931, to the outbreak of war.

At the beginning of the Second World War sterling and Canadian funds, like those of the other initial belligerents, fell to a discount at New York. The pegged official rates remained unchanged throughout the War. On July 5, 1946, the Canadian Government devalued the United States dollar in relation to the Canadian dollar bringing it to parity with the former. A corresponding adjustment was made to sterling, the rate being established at \$4.02 to the pound. This relationship remained unchanged at the beginning of 1948.

Subsection 2.—The Foreign Exchange Control Board*

Wartime controls exercised by the Foreign Exchange Control Board are dealt with at pp. 833-835 of the 1941 Year Book and at pp. 830-833 of the 1942 edition. In March, 1946, the Board published a report covering the main aspects of the operations from September, 1939, to the end of 1945, a summary of which may be found at pp. 981-983 of the 1946 Year Book. In April, 1947, the Board published a report of its operations in 1946, a summary of which may be found at pp. 1044-1047 of the 1947 Year Book. The following paragraphs are based on the Board's report for 1947, published in April, 1948.

* Prepared by R. H. Tarr, Secretary, Foreign Exchange Control Board, Ottawa.

Decline in Foreign Exchange Reserves.—During 1947 Canada's holdings of gold and United States dollars dropped from \$1,245,000,000 at the beginning of the year to \$502,000,000 at the end.* This decline was the result of the balance of international payments for 1947, which is dealt with in detail in the Foreign Trade Chapter at pp. 932-936. In brief, the outstanding developments during the year in Canada's balance of payments were a reduction in the over-all current account surplus (from \$357,000,000 in 1946 to \$47,000,000 in 1947) and an increase in the bilateral disequilibrium, i.e., an increase in the current surplus with the United Kingdom and Western Europe and in the current deficit with the United States. In 1947, as in 1946, Canada's large export surplus with the Sterling Area and with other overseas countries resulted in a serious financing problem. The Canadian dollar deficit of each group was met in approximately equal parts by transfers of convertible exchange to Canada and by loans extended by the Canadian Government. These loans totalled \$563,000,000. All Canada's imports during the year were paid for in cash, and since total imports and exports were almost in balance, sales on credit resulted in a nearly equivalent drain on Canada's exchange reserves.

Changes in Control During 1947.—The operations of exchange control throughout 1947 were governed by the Foreign Exchange Control Act and by the Regulations thereunder passed by the Governor in Council. Various changes were made in the Regulations and in administrative policy during the year, which, for the most part, represented a tightening of the control. However, the major steps taken to deal with the severe exchange losses in 1947 were measures of Government policy other than exchange control measures.

In March, 1947, the exemption was eliminated from permit for purchases of United States currency from banks to an amount not exceeding \$100. In May, 1947, the Regulations were further amended to reduce from \$100 to \$10 the amount of United States banknotes and coin that a resident may hold without special permission and at the same time the exemption from permit for the export of currency by Canadian travellers was reduced to \$10 in United States currency and a total of \$25 in both United States and Canadian currency. In November, 1947, as part of the Government's program to conserve United States dollar resources, the Board was instructed to limit the amount of United States dollars made available to Canadian residents for travel purposes to an annual ration of \$150, except where the travel is for genuine business, health or educational purposes.

At the same time as the introduction of the United States dollar travel ration, the maximum amount of funds which a resident of Canada who moves to the United States Dollar Area is permitted to transfer from Canada during the first year was reduced from \$25,000 to \$12,500. As in the past, United States dollars are not made available at the official rate for these transfers of capital. The transfers may, however, be made through free markets in the United States.

Since April, 1947, the Board has been approving certain types of capital payments by residents to non-residents only on condition that the non-residents concerned simultaneously reinvest Canadian dollars thus received in certain types of Canadian domestic securities. The principal payments affected by this change are payments of balances due on those inter-company accounts that represent capital

* At the end of 1948 Canada's holdings of gold and United States dollars had risen to \$998,000,000. This figure includes \$150,000,000 borrowed by the Canadian Government in the United States. Other factors contributing to the increase in reserves during 1948 will be discussed in the Board's report of its operations in 1948.

employed in Canada since before the Second World War, distributions on the winding-up, liquidation or reduction of capital of Canadian companies, payments of dividends in excess of current earnings, and payments of the proceeds of sales of real estate held as investments by non-residents.

The exchange control arrangements of the United Kingdom made it possible, commencing Jan. 1, 1947, for Canadian exporters and importers to trade on a sterling basis, as an alternative to United States dollars, with a number of Non-Sterling Area countries in addition to countries in the Sterling Area. The list of Non-Sterling Area countries covered by these arrangements was added to from time to time and by July 15, 1947, the United Kingdom had, for practical purposes, made the current sterling receipts of all other countries freely available for expenditure anywhere. On Aug. 19, 1947, the United Kingdom announced that it would be necessary to reimpose certain limitations on the transferability of sterling held by Non-Sterling Area countries because of the heavy drain on the United Kingdom's dollar resources. As a result, Canadian exporters could no longer obtain payment in sterling from Non-Sterling Area countries and Canadian importers could no longer pay sterling for imports from those countries. In consequence of the limitations imposed on the use of sterling, it was necessary for the Foreign Exchange Control Board to limit Canadian expenditures in the Sterling Area to sterling or Canadian dollars and the provision of United States dollars for that purpose in certain cases was accordingly discontinued. The end of sterling convertibility did not affect in any material way transactions between Canada and Sterling Area countries. Canadian exporters, as in the past, accepted payment in sterling for exports to the Sterling Area. Similarly, Canadian importers pay sterling to the Sterling Area for imports from Sterling Area countries.

In the course of the year, United States dollars ceased to be made available for the commencement of new operations outside Canada by Canadian residents, except where the new operations will be important as export outlets or as sources of necessary imports. Where in these cases large amounts are involved the stipulation may be made that the applicant obtain the funds required from sources outside Canada, for example by borrowing or issuing stock in the United States.

In September, 1947, the Board revised and standardized the method under which remittances of earnings by Canadian subsidiaries and branches of foreign companies would be approved. Applications for such remittances may be submitted three months after the close of the fiscal year to which they relate, and companies with accumulations of earnings are given the choice of remitting the amount of the earnings represented by either the first or last year of the accumulations. Calculation of the amount payable is also subject to adjustment for capital profits, the customary allowances for tax purposes, depreciation, reserves, etc., and consideration is given also as to whether or not special financing is required to make the remittance.

As a means of enabling the Board to give more careful scrutiny to applications for United States dollars, the Regulations were amended in October, 1947, to reduce from \$100 to \$25 the exemption from completion of a permit form for applications for United States dollars in forms other than currency. At the same time the authority of banks and the Post Office to sell United States dollars for benevolent remittances was reduced from \$100 to \$25 per applicant per month*. Larger applications are reviewed by the Board.

* In May, 1948, the authority of banks and the Post Office to sell United States dollars for benevolent remittances was reduced to \$10 per applicant per month.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE

Section 1.—Loan and Trust Companies*

The 1934-35 Year Book presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies for 1945 and 1946 have been supplied by those companies and are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Tables 2 and 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920, the Dominion Department of Insurance took over from the Department of Finance the administration of the legislation concerning Dominion loan and trust companies.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,637,298 in 1922 to \$213,649,794 in 1931, and to \$215,362,414 in 1946. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$305,368,533 in 1946. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1946 to \$3,150,872,594.

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. In the war years from 1939 to 1945 the amount invested in mortgages declined by almost \$27,000,000, which was practically all accounted for by an increase in the amount of bonds and stocks held. The 1946 figure of \$73,000,000 was slightly higher than that for 1945. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally, in the more prosperous farming communities.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the

* Revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance, Ottawa.

living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but both the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.—The figures in Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

¹ Excludes one loan company incorporated under the laws of Quebec whose capital stock and debentures have been issued largely outside of Canada.

2.—Assets and Liabilities of Loan Companies Chartered by or Supervised by the Federal Government, as at Dec. 31, 1937-46

NOTE.—For the years 1914-24, see p. 913 of the 1937 Year Book. Figures comparable to those shown below for the years 1925-36 are given at p. 985 of the 1946 edition. The figures appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Dominion Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2, pp. 1059-1060).

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

There have been incorporated in recent years, by the Parliament of Canada, three companies that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder making personal loans of \$500 or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

5.—Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1937-46

NOTE.—Figures for the years 1928-32 will be found at p. 838 of the 1942 Year Book and for the years 1933-36 at p. 988 of the 1946 edition.

¹ First year Small Loans Act in operation.

² Not including balances other than small loans.

³ Includes \$200,000 bonds, debentures and stock.

⁴ Includes \$250,000 bonds.

⁵ Includes \$250,000 bonds and \$1,534,756 balances of loans made in amounts greater than \$500.

⁶ Includes

\$4,046,210 balances of loans in amounts greater than \$500.

⁷ Includes taxes.

⁸ No unearned

income, since from 1940 small loans have been on an earned basis.

⁹ Includes business other than small loans.

The Small Loans Companies chartered by the Federal Government show a substantial increase in business for 1946 as compared with the previous year. The number of loans made to the public during the year increased from 180,781 to 245,887 or by 36 p.c. and the amount of such loans rose from \$27,767,766 to \$40,188,730. The average loan was approximately \$163 compared with \$154 in 1945. At the end of 1946, the loans outstanding were 159,651 to an amount of \$20,307,529 or an average of \$127 per loan.

Licensed Money-Lenders.—In addition to the above-mentioned small loans companies, 51 licensed money-lenders furnished annual statements of their business, showing, for 1946, total assets of \$18,237,930, of which balances of small loans amounted to \$9,309,370, other balances to \$7,369,577, bonds, debentures and stocks to \$520,926, real estate to \$219,119, cash to \$291,413, and other assets to \$527,525. Liabilities amounted to \$18,237,931, of which borrowed money accounted for \$11,994,838 and paid shares and partnership capital for \$3,235,257. Loans made in 1946 numbered 105,991, totalling \$18,193,481 and averaging almost \$172, an increase of 26.0 p.c. in number and 28.8 p.c. in the gross amount; at the end of the year there were 73,345 loans outstanding with a total of \$9,309,370 averaging \$127. About 41 p.c. of the loans made in 1946 were between \$100 and \$200. Further details of this type of business are given in the 1946 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Dominion Department of Insurance.

Section 3.—Sales of Canadian Bonds*

Previous editions of the Year Book have traced the sales of Canadian bonds through the interesting period covered by the First World War and the intervening years to the outbreak of hostilities in 1939. In 1940, the first complete year of the Second World War, total sales were far greater than in any previous year. There

* Revised from information supplied by E. C. Gould, the *Monetary Times*.

was a slight decrease in 1941, but in each of the years 1942 to 1945, sales were successively higher. The 1946 total, however, was 27.8 p.c. lower and the 1947 total 41.8 p.c. lower than that of 1945.

Sales of Dominion and guaranteed bonds in 1947 showed a marked decline at \$3,852,975,850 compared with \$4,974,223,850 in 1946 and \$7,747,691,000 in the peak year 1945. While buoyant Federal Government revenues and curtailed expenditures accounted for this decrease, the second issue of Canada Savings Bonds encouraged the continuation of regular savings habits developed by the Victory Loan campaigns. During 1947, the Federal Government's fiscal position did not necessitate any early large-scale public borrowings. Treasury Bills outstanding remained at a fairly constant level while the cash resources of the Government permitted a substantial decrease in the outstanding amount of deposit certificates.

As contrasted with Federal financing, the total of provincial and guaranteed issues in 1947 at \$229,562,000 was greater than in any previous year and more than double the 1946 figure of \$114,296,800. Municipal financing also increased to \$238,887,410 as compared with \$140,815,491 in 1946. On the other hand, in the field of corporate bond financing, the aggregate for 1947 of \$379,674,500 was much lower than that of \$581,499,188 for 1946. While industrial and railway bond sales maintained levels approximately the same as those for 1946, the public utility aggregate was less than one-half that of the preceding year.

In retrospect, 1947 was an important year in the Canadian bond market. While new issues were generally well absorbed by institutions and individual investors, the year witnessed a gradual firming in interest rates. This trend culminated with the withdrawal of the Bank of Canada from supported pegged markets, immediately after the close of the year. With this change in central bank policy, bond markets are now freer to reflect the judgment of the investing public than they have been for several years.

7.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1938-47

(From the *Monetary Times Annual*)

NOTE.—Figures for the years 1904-25, inclusive, are given at p. 921 of the 1933 Year Book and for 1926-37 at pp. 990-991 of the 1946 edition. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Dominion and since the War the Federal Government has advanced money to both the Canadian National and Canadian Pacific Railways for the purchase of equipment. For this reason such small bond issues as have been made by the Canadian Pacific Railway are included under "Corporation".

SECTION 2. LIFE INSURANCE.....	1070	SECTION 3. CASUALTY INSURANCE.....	1083
Subsection 1. Grand Total of Life Insurance in Canada.....	1071		
Subsection 2. Historical and Operational Statistics of Dominion Registered Life Insurance Companies.....	1072		

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Dominion registration although some have provincial licences only. Many fraternal orders and societies, too, are engaged in this kind of business. An extended treatment of the salient features of the legislation covering insurance in general and the fields of Dominion and provincial jurisdiction will be found in the 1941 Year Book at pp. 844-846. The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932, while an article on insurance as it affects the balance of international payments appears at pp. 870-871 of the same edition. The 1947 Year Book, at pp. 1064-1074, includes an article on insurance in Canada during the depression and war periods.

Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were usually situated at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1946, shows that at that date there were 270 fire insurance companies under Dominion registration; of these, 59 were Canadian, 73 were British, and 138 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Subsection 1.—Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

* Material in this Chapter has been revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance, Ottawa.

In the more detailed analyses of fire insurance dealt with in Table 2, the statistics cover only the operations of companies with Dominion registration; as shown in Table 1, such companies account for approximately 90 p.c. of the insurance in force.

Subsection 2.—Operational Statistics of Dominion Registered Fire Insurance Companies

The trend in the average rate payable for fire insurance has been generally downward, although the increases in fire losses experienced in the years from 1941 to 1946 have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate.

2.—Fire Insurance, by Companies Operating under Dominion Registration, 1880-1947

NOTE.—Figures for the years 1869-1899 are given at p. 973 of the 1939 Year Book, and figures for 1901-39 at p. 847 of the 1942 edition.

¹ Yukon, Northwest Territories and also certain 'floater business' that cannot be apportioned to any one province.

Classification of Fire Risks.—For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and losses by 27 classes of risks agreed upon on the basis of net premiums written, less registered or licensed reinsurance. This experience for the five years 1940-44 is given at p. 1077 of the 1947 Year Book. For 1945 and 1946 the returns were received on a "direct written" basis, excluding all reinsurance ceded or assumed, and the classification was changed and reduced to 21 classes. The 1945 and 1946 experience is given in Table 4.

Subsection 3.—Finances of Fire Insurance Companies

Tables 5 to 7 show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Owing to the fact that it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 28, p. 1087 gives similar information for registered companies whose transactions are confined to casualty insurance.

¹ Available for the first time in 1946.² See footnote to Table 8, p. 1069.

The property losses by provinces given in Table 9 are the total fire losses insured and uninsured. The percentages of the provincial total uninsured were as follows: Prince Edward Island, 19·1; Nova Scotia, 56·1; New Brunswick, 36·1; Quebec, 22·2; Ontario, 18·8; Manitoba, 13·0; Saskatchewan, 30·3; Alberta, 20·3; British Columbia, 38·1; and Yukon and Northwest Territories, 61·3. Uninsured losses formed 24·5 p.c. of total losses for Canada.

Section 2.—Life Insurance

The life insurance in force, in Canada, in companies registered by the Dominion in 1947 was over \$11,900,000,000, an increase of over \$1,088,000,000 over the figure for 1946. There has been not only an increase in new business, but also a greater stability in business written compared with the depression in early war years.

The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

Year	Net in Force at Beginning of Year	Gain in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6

1947.....	10,812,000,000	1,088,000,000	10.1

¹ Excluding \$44,000,000 adjustment arising out of method of reporting juvenile insurance.

Subsection 1.—Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 12 summarizes the volume of business transacted by Canadian, British and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

Subsection 2.—Historical and Operational Statistics of Dominion Registered Life Insurance Companies

Historical Statistics of Life Insurance.—The net life insurance in force of all companies registered by the Dominion was only \$35,680,082 in 1869, while in 1947 it was \$11,900,239,348.* The amount per head of the estimated population of Canada has more than doubled since 1923—evidence of the general recognition of the value of life insurance for the adequate protection of dependents against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

13.—Life Insurance in Force and Effected in Canada by Companies Operating Under Dominion Registration (Fraternal Insurance Excluded)¹, 1880-1947

NOTE.—Figures for the years 1869-99 are given at p. 958 of the 1938 Year Book, and figures for the years 1901-39 at p. 855 of the 1942 edition.

¹ For statistics of fraternal insurance, see pp. 1078-1080. given at p. 139.

² Based on estimates of population

³ Subject to revision.

Life insurance business was transacted in Canada during 1946 by 45 active companies registered by the Dominion, including 28 Canadian, 4 British and 13 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition to these active companies, there were 8 British and 4 foreign companies writing little or no new insurance, their business being confined largely to the policies already on their books.

The operations analysed in the tables of this Subsection, with the exception of Table 17, cover only those companies under Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 12, their operations cover about 94 p.c. of the life insurance in force in Canada.

* This total does not include fraternal insurance.

Subsection 3.—Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income received and expenditure made, arise in part from business abroad.

18.—Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1942-46

NOTE.—One British company transacting fire insurance in Canada transacts also life insurance in Canada and, inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 5, p. 1066.

¹ A detailed classification of assets showing investments of Canadian companies and giving the percentage of the total in each group and sub-group for 1944, 1945 and 1946 will be found at p. xiv of the Report of the Superintendent of Insurance, Vol. II, for the year ended Dec. 31, 1946.

² Book values. The totals carried into the balance sheets before 1945 included some market (or authorized) values of these assets; these totals were: \$2,729,419,685 in 1942; \$2,921,471,387 in 1943; and \$3,140,001,113 in 1944. After 1944, book values were in all cases carried into the balance sheet, any excess of book over market values being covered by a reserve in the liabilities.

³ None reported.

¹ Includes income on business outside Canada.² Includes expenditure on business outside Canada.

Subsection 4.—Life Insurance Effectuated through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effectuated with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and, unless the actuary certifies to the solvency of each fund, a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 16 Canadian societies reporting to the Insurance Department of the Federal Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of societies, 30 transacted business in Canada during 1946, two of which do not grant life insurance benefits.

**Subsection 5.—Life Insurance in Force Outside Canada by Canadian
Companies Registered by the Federal Government**

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1946, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 62 p.c. of all such business in force was written in United States currency and over 22 p.c. in sterling. From another standpoint, over 32 p.c. was written in currency of British countries outside Canada, and over 67 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had in force in countries outside Canada, at Dec. 31, 1946, life insurance amounting to \$4,132,034,001, and sinking fund and capital redemption insurance amounting to \$5,444,456. As shown in Table 22, insurance in force in currencies other than Canadian amounted to \$3,997,305,177. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1946, amounted to \$1,387,784,924. Since the business in force in Canada of these companies at Dec. 31, 1946, amounted to \$7,202,652,090, the total business on their books, Canadian and non-Canadian, amounted to \$11,340,130,547. Thus, over 36 p.c. of the total business in force was outside Canada.

22.—Life Insurance Effectuated and in Force and Liabilities of Canadian Companies (Excluding Fraternal Societies) Operating Under Dominion Registration, in Currencies Other than Canadian, 1946.

NOTE.—Figures are given in Canadian dollars, mainly at par rates of exchange.

Subsection 6.—Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

24.—Business Abroad of Canadian Life Companies and Fraternal Societies, 1946

NOTE.—Figures for business in Canada will be found in Table 12, p. 1071.

Section 3.—Casualty Insurance

Since 1875, the growth of casualty insurance business has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of casualty insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1946 shows that casualty insurance in Canada now includes various forms of accident and 23 other classes of insurance transacted by Dominion registered companies. In 1880, 10 companies transacted casualty insurance, but in 1946 such insurance was issued by 273 companies, of which 58 were Canadian, 72 British and 143 foreign; of these, 204 companies also transacted fire insurance. In addition, 21 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 3 fraternal orders or societies carried on accident or sickness insurance only.

Table 26, which shows the division of business in this field between Dominion and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures are included in the financial statistics of fire insurance companies given in Section 1,

Subsection 3, of this Chapter. Table 28 gives similar figures for the total casualty business of Canadian companies, and for the casualty business in Canada of British and foreign companies, whose transactions are confined to insurance other than fire and life. In 1946, there were 11 Canadian, 5 British and 50 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the pre-war years, the result of lessened traffic, but since the end of hostilities the experience tends to be less favourable and now stands around 51 p.c.

Hail insurance in 1943 and 1944 had an unfavourable experience, but in 1945 and 1946 the loss ratio fell to approximately 25 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for the years 1941 to 1946, inclusive, were as follows:—

Year	Premiums	Claims Incurred	Under-writing Profits
	\$	\$	\$
1941.....	6,011,922	2,781,190	1,694,470
1942.....	14,295,543	7,983,963	3,855,415
1943.....	10,061,059	4,931,286	3,449,873
1944.....	6,754,361	2,172,418	3,243,889
1945.....	5,978,274	2,995,704	1,704,367
1946.....	5,655,392	2,232,701	2,084,412

This class of insurance will, no doubt, figure more largely in the business of companies in post-war years than it did before 1939.

Subsection 2. Provincial Distribution of Production, 1941-46.....	1099		

PART I.—NATIONAL ACCOUNTS*

This Chapter marks a considerable advance in the treatment of national accounts statistics. For the first time comparable historical series are made available for the years 1926 to 1947. These include national income, gross national product, gross national expenditure, and personal income and its disposition. In addition, separate tables are presented for the years 1938 to 1947 showing the sources and disposition of private saving.

These tables summarize some of the more important economic transactions in the country and make possible the study of interrelationships in the economic system as a whole. Only brief notes on the tables are included: for more detailed explanations of concepts and methods reference should be made to the 1947 Year Book and to the publications by the Bureau of Statistics on National Income. These publications contain a number of tables not presented here.

National Income and Gross National Product.—The main totals in Table 1 (columns (4) and (8)) measure the value of goods and services produced by the labour and capital of Canadian residents in a year, each at a different stage in the valuation of these goods and services. Net national income at factor cost, or more briefly, national income, measures the value of new production after provision has been made for depreciation of capital assets employed in production, and exclusive of indirect taxes less subsidies. For the economy as a whole this total equals the earnings of Canadian residents from the production of goods and services, that is, the sum of salaries and wages, profits, interest, net rent and net income of agriculture and other unincorporated business. The gross national product measures the value of these goods and services at the prices at which they are purchased in the market. Accordingly, to obtain the gross national product, it is necessary to add to the national income, provisions for depreciation and indirect taxes less subsidies.

When the resources of an economy are fully employed the volume of new goods and services produced can increase but slowly from one year to the next. In 1946 economic resources in Canada were more or less fully employed. Accordingly, only a small increase in the volume of goods and services could be expected from 1946 to 1947. Prices, however, rose substantially from 1946 to 1947. Thus the

* Revised under Dr. C. M. Isbister, Assistant Dominion Statistician (Research and Development) by A. S. Abell, Director, National Income.

cost-of-living index rose by 10 p.c. during this period. Because the gross national product is expressed in terms of *value* and not in terms of *volume* the relatively small increase in the *volume* of goods and services from 1946 to 1947 appears as a substantially larger increase in the gross national product—an increase of 13 p.c. In 1939, on the other hand, there were many unemployed resources in Canada, making it possible for a substantially larger volume of goods and services to be produced from 1939 to 1940. At the same time, the increase in prices as measured by the cost-of-living index was relatively small, 4 p.c. Accordingly, the increase of 21 p.c. in the gross national product from 1939 to 1940 reflects largely an increase in the *volume* of real goods and services and to a smaller extent price increases.

¹ Includes military pay and allowances. See Table 3, columns 1 and 3. ² Revised preliminary.

The chart at the top of p. 1090 compares the percentage change in the gross national product by years with the corresponding percentage change in the price level as measured by the cost-of-living index. It illustrates the necessity of keeping in mind that gross national product and related aggregates measure price changes as well as changes in the real volume of production. If the cost-of-living index were a precise indicator of the price fluctuations of all goods and services included in the gross national product it could be used to convert the dollar quantities of gross national product to real terms, that is, to the physical volume of goods and services produced. Since, however, the cost-of-living index excludes the prices of many goods and services it can be used only as a rough indicator of the importance of the price element included in the year to year changes of the gross national product.

(Plotted on semi-logarithmic scale)

The heavy line in the chart at the bottom of p. 1090 traces the movement in the gross national product for the period 1926 to 1947. The dotted line graphs the movement in the cost-of-living index for the same years with 1935-39 as the base period.

Gross National Expenditure.—As indicated previously, one way of measuring the market value of new goods and services produced by Canadian residents is to add together all earnings (factor costs) arising in the course of production, depreciation allowances and similar business costs, and indirect taxes less subsidies. Another

¹ Includes Mutual Aid, UNRRA and Military Relief expenditure for the years 1942-47, respectively, to the amount of \$1,002,000,000; \$518,000,000; \$960,000,000; \$858,000,000; \$97,000,000; and \$38,000,000.

² Revised preliminary.

way of measuring these goods and services is to add together all sales and to adjust them for imports and changes in inventories. The total thus obtained is called gross national expenditure.

What is produced must either be sold or added to the inventories. Four broad types of sales can be distinguished: sales to persons, to governments, to business for capital account (capital formation at home including changes in inventories); and to foreigners (exports). The total of these sales includes imports of goods and services. Since the purpose is to measure only production of labour and capital of Canadian residents, imports of goods and services are deducted.

Thus national expenditure indicates the manner in which annual output is utilized. In 1928, spending by persons on consumer goods and services absorbed approximately 70 p.c. of the output while government expenditure on goods and services accounted for about 10 p.c. and investment in Canada in plant, equipment, housing and inventories for about 19 p.c. In 1933, during the depth of the depression, the percentages changed significantly to about 82 p.c., 15 p.c. and 3 p.c., respectively. The pattern of 1939, the last pre-war year, returned approximately to that of 1928, 69 p.c., 13 p.c. and 16 p.c. The tremendous expansion in output during the war years was absorbed in large part by Government expenditure for military purposes so that consumer spending in 1944 absorbed only 53 p.c. of total output, while Government spending accounted for 43 p.c. Investment expenditure was relatively small. By 1947, the pattern had again changed markedly. Reduced Government spending was more than offset by increased consumer spending which absorbed 66 p.c. of the nation's output and a phenomenally high level of investment which absorbed 22 p.c.—the highest percentage since 1926.

Personal Income.—Some earnings which arise in the course of production are not paid out to persons, e.g., undistributed profits, Government trading profits, etc. On the other hand, some incomes received by persons are not compensation for current production, e.g., unemployment insurance benefits. Personal income is the sum of current receipts of income whether or not these receipts are earnings from production. Thus it includes salaries and wages, net income of unincorporated enterprise, interest, dividends and net rentals of persons, and transfer payments from governments such as family allowances, unemployment insurance benefits and war service gratuities. Table 3 indicates that personal income was at a pre-war peak of \$4,547,000,000 in 1928. It began to drop in 1929 and reached a low of \$2,758,000,000 in 1933. It then turned upwards and reached \$4,291,000,000 in 1939. This trend was accelerated during the War and the post-war period and personal income reached an all time high of \$10,279,000,000 in 1947.

Two things should be kept in mind in interpreting these figures: first, the fluctuations in the figures must be related to the purchasing power of the dollar—an increase in the price level lowers income in real terms while a decrease raises it. Secondly, the amount at the disposal of persons for spending and saving is not the whole of personal income but only the portion that remains after payment of direct taxes. This aggregate is commonly referred to as disposable income.

¹ Employer and employee contributions to social insurance and government pension funds.² Includes charitable contributions from corporations.³ Excludes interest on public debt.⁴ Revised preliminary.

Disposition of Personal Income.—Personal direct taxes were only approximately 1 p.c. of personal income in the years 1926 to 1928. This percentage increased during the 1930's and reached a high of 9 p.c. during the war years 1943 to 1945.

In 1928, 93 p.c. of personal income was spent and 6 p.c. was saved. The percentage of current income spent increased rapidly during the depression. In 1930, 95 p.c. of personal income was spent and only 3 p.c. was saved. During the following four years more was spent than was available out of current income after payment of taxes indicating that, for the economy as a whole, people had to supplement their current incomes by liquidation of assets or by borrowing. In the years 1932 and 1933 negative saving reached its height. Consumer expenditure plus payment of direct taxes exceeded personal income by 6 p.c. Saving became positive again in 1935 but it was not until 1939 that it exceeded the 1928 level. During the War, as a result of shortage of goods coupled with intensive Government campaigns for saving, the percentage of current income saved rose rapidly to a high of 20 p.c. in 1943 and 1944. The percentage then began to decline and in 1947 it approximated again the levels of 1928 and 1939.

Source and Disposition of Private Saving.—Tables 5 and 6 summarize the main source and use of private saving. The role of government surpluses or deficits in this setting indicate, for example, that in the years 1942 to 1945 the very large government deficits which resulted from expenditure for military purposes were financed to a large extent by personal saving and to a considerably smaller extent by business saving. By 1947, the government's position was completely reversed. The huge government surplus of \$917,000,000 helped to bridge the gap between private saving and the record level of investment.

Corporation Profits.—A separate section analyses the trend of corporation profits for the years 1936 to 1947. (See pp. 1109-1112.)

PART II.—RELATED ECONOMIC STATISTICS

Section 1.—Survey of Production*

This Section deals with gross and net values of commodity production. Net production, in general, represents an estimate of the amount contributed to the national economy by the leading industrial groups engaged in commodity production. It is made up of the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in production. For purposes of economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication included in the latter.

Current Trends.—The industrial expansion generated by war conditions had, by 1944, reached the highest level in Canadian history. While the termination of war led to a reduction during the latter part of 1945, the value of commodity production in 1946 was still greater than in any other recorded year with the exception of 1944, when war production was at maximum.

This industrial expansion is indicated by comparison with the pre-war year 1938. Gross value in 1945 was 120 p.c. over that of 1938, the total in that year being \$5,300,000,000 against \$11,700,000,000 in 1945. The gain of 113 p.c. in the net value of production was rather less than in the gross value, mainly because cost of materials advanced to a greater extent than the value of the final product.

The value of production remained at the high level in 1946 of \$12,200,000,000 although industrial operations, being retarded by lack of raw materials and labour disputes, showed a recession from the preceding year, but commodity prices at wholesale recorded an increase of nearly 5 p.c. Pressure for production continued to increase under the stimulation of domestic purchasing power, large-scale government credit to finance exports abroad, and the urgent need for increased housing accommodation in Canada. Indications are that the value of production was greater in 1947 than in any other peacetime year, both volume and prices rising to higher levels.

A general description of the method used in computing gross and net production figures is given at pp. 176-177 of the 1939 Year Book and in the "Survey of Production", an annual report issued by the Dominion Bureau of Statistics.

* Prepared under the direction of Dr. C. M. Isbister, Assistant Dominion Statistician (Research and Development), Dominion Bureau of Statistics, by Sydney B. Smith, Chief, Business Statistics.

Subsection 1.—Leading Branches of Production, 1941-46

Canada, essentially a producer from basic resources of farm, forest and mine, greatly increased in importance as a manufacturing country within these six years.

With the outbreak of war, transition, tooling, and new equipment of manufacturing industries for war demands was quickly organized and, by 1941, the remarkable gain in the net value of these industries, over 1939, was 70 p.c. A further increase of 27 p.c. took place in 1942. The program was advancing toward peak production and in 1943 gained another 15 p.c. over the preceding year. By 1944, net value of production had reached \$4,015,776,010, which was \$2,073,304,772 over 1940 or a total percentage increase of 106.7. During the years 1945 and 1946, there was a curtailment in production and the figure of net production of the manufacturing industries in 1946 dropped about 14 p.c. below that of 1944.

Agriculture, the basic industry in Canada, was in a favourable position in 1940 as regards grain stocks in storage; also acreages sown were at a high level. The crop of 1941, however, was light due to drought, but the dairying and live-stock branches of the industry had expanded rapidly after the outbreak of war, and only a slight increase in value of production for the agricultural industry as a whole was felt. For 1942, a record yield of grain and high production of hogs, eggs and cheese for overseas markets brought about an outstanding percentage gain of 80.2 over 1941. Net value of agricultural production in 1943 showed a decline of 9.4 p.c. for that year. Production value increased for 1944 by 24.4 p.c. over 1943 and resulted in the greatest output shown in any year under review.

After the War food was still in great demand and Canadian farmers found markets for all they could produce. The net value of agricultural production in 1945 was \$1,269,362,000, and increased to \$1,483,263,000 or by 17 p.c. in 1946.

The forestry industry experienced a pronounced improvement during the war years. The value of production for this industry increased steadily from 1941 to 1946, the increase over the six-year period being approximately \$290,000,000 or 69 p.c.

Mining increased in value of production for the years 1941-42, but during the next three years showed decreases of 7.5 p.c., 4.5 p.c. and 8.9 p.c., respectively, as compared with each preceding year. This industry, however, showed an increase of 2.1 p.c. in 1946.

The value of production for the fisheries and trapping industries recorded the highest percentage gain of the primary industries. Fisheries production in 1941 increased in value by \$14,000,000, or 36 p.c. over the previous year; by 1946 the increase in value from 1941 reached 108 p.c. or a total of \$107,908,162. Trapping production increased in value by \$4,000,000 in 1941 over the preceding year, or by 35 p.c., and gained 105 p.c. from 1941 to 1946.

As would be expected electric power rose steadily during the years 1941-46. From 1941 the net value of production of this industry increased from \$183,000,000 to \$220,000,000 or by 20 p.c.

The total net value of production of the primary industries—agriculture, forestry, fisheries, trapping, mining and electric power—increased by 46 p.c. during the war years 1941-44. In 1945, it decreased by 9 p.c. compared with 1944 but in 1946 increased 16.1 p.c. over the previous year.

Construction, a secondary production industry, made a substantial gain during the first three war years 1940-42 when the building of wartime factories, homes for personnel, etc., was at its peak. From the pre-war year 1939 to 1942 the increase in net value of production was \$127,000,000. At the end of the War in 1945 the net value of production of the industry amounted to \$237,957,837 and in 1946 was \$408,695,662 or an increase of 52.5 p.c. over 1945.

Net production value in custom and repair also made rapid progress. The net value of \$131,000,000 in 1941 increased to \$213,000,000 or 63 p.c. by 1946.

Total value of production of the secondary industries which includes construction, custom and repair and manufactures increased from 1941 to 1944 by 47 p.c. but decreased about 8 p.c. from 1944 to 1946.

Table 1 classifies industry into primary and secondary production, but naturally many stages of the manufacturing industries are closely connected with the primary resources. Fish-curing and -packing plants, for instance, are operating in close relationship to the fishing fleets, sawmills with forestry, and smelters and refineries with metal mines. The gross and net values of production of such processing industries are given separately in Table 2. This table is designed to indicate the method of computing the duplication between primary industries and manufactures and consequently to establish the levels of "manufactures, not elsewhere stated".

1.—Gross and Net Values of Production, by Industries, 1941-46

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the productive process

The above record of Canadian production is impressive and economic activity has continued at a high level into the post-war years as a result of the accumulation of a huge backlog of domestic requirements as well as the need for the rehabilitation of European countries. With production of equipment and supplies of warfare discontinued, the percentage of total production (primary and secondary) in 1946 declined by the slight margin of only 4 p.c. from the peak war-production year of 1944.

Subsection 2.—Provincial Distribution of Production, 1941-46

All nine provinces participated in the expansion of wartime production during 1940-45. Generally speaking, the relative gains during the war period were greater in the eastern provinces, being influenced by the concentration of industry and its diversified wartime manufactures.

The increase of \$547,454,262 in the net commodity production of Ontario during the period 1941 to 1946 exceeded in absolute amount the record for any other province. This figure was \$122,546,274 lower than the peak war year of 1944.

Net value produced in Quebec was \$1,785,407,464 in 1946 compared with \$1,251,896,590 in 1941, an increase of 43 p.c. compared with 27 p.c. in Ontario. This amount also was \$114,416,867 below that of 1944.

Prince Edward Island recorded a percentage increase of 109 during the period 1941-46, the net value having risen from \$10,649,062 to \$22,244,191. The output of Nova Scotia and New Brunswick showed gains of 54 p.c. and 68 p.c., respectively. As manufacturing increased in the east, so agricultural production for supplying food to overseas markets expanded in the Prairie Provinces of Manitoba, Saskatchewan and Alberta and net output in these Provinces during these years gained 68 p.c., 123 p.c. and 92 p.c., respectively.

British Columbia showed an increase of 58 p.c. in production during the years 1941-46.

¹ Based on estimated population figures as given at p. 139.

Per Capita Production.—The Dominion total of per capita production in 1941 was \$389. This was \$133 above the 1938 figure and by 1944 it had reached the highest level on record, \$563. With the peak of wartime production past, per capita production dropped to \$502 in 1945 but increased slightly in 1946 to \$526.

Ontario.—With its pre-eminent industrial position, Ontario was the leader on a per capita basis during the period 1941-46. The increase was steady and rose from \$531 in 1941 to \$677 in 1944 or by \$146; in 1946 this figure was \$624.

Quebec.—Per capita production in Quebec increased from \$376 to \$543 thus gaining \$167 in the period 1941 to 1944. Actually, the Province showed during this period a much greater percentage increase in per capita production than did Ontario, viz., 44 p.c. as compared with 27 p.c. in the latter Province. Per capita production dropped to \$482 in 1945 but increased by \$10 over this figure in 1946.

Maritime Provinces.—The three Maritime Provinces reached their highest per capita production in 1946. Prince Edward Island registered a gain of \$101 over the 1941 per capita of \$237; Nova Scotia increased \$101 over the 1941 per capita figure of \$222; and New Brunswick \$126 over the \$211 per capita of 1941.

Prairie Provinces.—These Provinces showed wide fluctuations in per capita production in the period 1941-46. Manitoba made steady gains from \$268 in 1941 to \$428 in 1944, dropped to \$381 in 1945 but recorded its highest per capita figure of \$452 in 1946. Saskatchewan held no such record. Per capita production was \$198 in 1941 and in 1944 it reached \$625, the highest per capita figure for any province except Ontario. Between these years the fluctuations were marked and by 1946 the figure was \$473. For Alberta the 1941 per capita was \$280; in 1944, \$509; and in 1946, \$534; recessions were shown in the intervening years.

British Columbia.—Per capita production gained consistently in British Columbia until 1943, value per capita rising from \$458 in 1941 to \$625 in 1943 and decreasing to \$590 by 1946.

Leading Branches of Production in Each Province, 1941-46

Maritime Provinces.—Taking net production of the Maritime Provinces as a whole, the industry showing the highest percentage gain during the years 1941-46 was fisheries with an increase of 181 p.c. from 1941. Prince Edward Island made a remarkable showing in fisheries production during this period and in 1946 the figure was \$4,155,906, more than four and one-half times as great as the 1941 total, \$872,679. For New Brunswick the gain was 178.8 p.c. above the 1941 figure of \$5,017,233. Nova Scotia followed with an increase of 173.3 p.c. for 1946 over the figure of \$11,523,628 for 1941.

Next in importance to the fisheries was the agriculture industry. The three provinces together gained 96 p.c. in this branch of production over the same six years, \$40,484,000 in 1941 against \$79,214,000 in 1946. Forestry ranked third with a 72 p.c. gain for the three provinces. Prince Edward Island recorded a gain of 127.4 p.c., Nova Scotia 83.7 p.c. and New Brunswick, 66.4 p.c.

Quebec.—Peak production for Quebec during the period 1941-46 was reached in 1944 with a value of \$1,899,824,337, an increase of 52 p.c. over 1941. The 1946 figure of \$1,785,407,464 was a 4 p.c. gain over \$1,716,038,573 recorded in 1945.

The percentage of total production in manufacturing industries was greater than that in all other branches of industry in this period, increasing from 65 p.c. to 71 p.c.; net value in manufacturing showed a gain of 66 p.c. from 1941 to 1944. The figure dropped by almost 15 p.c. for 1945, and showed a further decrease of 2 p.c. in 1946.

Forestry and agriculture recorded steady increases of 79 p.c. and 76 p.c., respectively, during the six-year period.

4.—Net Values of Production, Classified for Each Province, by Industries,
1945 and 1946

NOTE.—For gross value of production by provinces, see Table 3, p. 1099.

¹ Duplication between agriculture and forestry, as well as duplication under manufactures (see p. 1097).

Ontario.—Manufacturing held the leading position in this Province as regards net value of production during the years 1941-46, and accounted for between 64 and 72 p.c. of the total for each year. For the four-year period 1941 to 1944 (the year of peak production) there was a percentage gain of 42 p.c. A decline of 11 p.c. was recorded for 1945 but the figure at \$1,720,938,199 was higher than for any previous year before 1943. A further decline of 4 p.c. was recorded for 1946. Agriculture, forestry, and custom and repair showed sharp increases during this period; agriculture gained 72 p.c.; forestry 69 p.c.; and custom and repair 60 p.c.

Prairie Provinces.—Agriculture, naturally, predominated in the Prairie Provinces of Manitoba, Saskatchewan and Alberta. Net value of production of manufacturing and mining were also progressive groups in Manitoba contributing over 38 p.c. of the provincial total for each year from 1941 to 1944.

Climatic conditions in Saskatchewan and Alberta caused some fluctuations in agricultural production for the years 1941 and 1943 but these were counterbalanced for the Prairie Provinces as a whole by bumper crops for all three provinces for 1942 and 1944. Increases for 1942 compared with 1941 were 71 p.c. for Manitoba, 210 p.c. for Saskatchewan, and 137 p.c. for Alberta. For the year 1944 increases compared with 1943 were: 4 p.c. for Manitoba, 68 p.c. for Saskatchewan and 38 p.c. for Alberta. Value of agricultural production for 1945 dropped between 20 p.c. and 37 p.c. for the Prairies but increased from between 15 p.c. and 36 p.c. for 1946.

Value of manufacturing industries for Alberta more than doubled during the years 1941-44 and showed high percentage increases in the other Prairie Provinces. The increases during the years 1941-44 were: Alberta, 68 p.c., Manitoba 62 p.c. and Saskatchewan 45 p.c. In 1945, these industries declined by 2 p.c. for Manitoba and 6 p.c. for Saskatchewan but gained by 1 p.c. for Alberta; increases of 4.3 p.c., 1.0 p.c., and 6.6 p.c., respectively, were recorded in 1946.

British Columbia.—Manufacturing, forestry and mining were the leading branches of industry in British Columbia from 1941 to 1943; since when agriculture has displaced mining. Net value of manufactures increased from \$273,000,000 for 1941 to \$337,000,000 for 1944, but has since declined to \$293,000,000 for 1946. Forestry increased by \$50,000,000 or 50 p.c. in the period 1941-46. Mining increased from 1941 to 1942 by 7 p.c., declined by 32 p.c. till 1944 and then increased 33 p.c. by 1946.

Yukon and the Northwest Territories.—Over 82 p.c. of net value of production in Yukon and the Northwest Territories from 1941-46 came from trapping and mining. In 1941 the net value for trapping amounted to \$2,672,194; by 1946 it had increased by almost \$755,000. Mining, on the other hand, increased by almost \$1,000,000 during the years 1941-42 but showed a sharp decline during the later years and dropped by 1945 to \$1,429,494, the lowest figure in ten years; however, in 1946 the figure was \$1,950,935 or a gain of 36 p.c. over 1945.

Section 2.—Canada's International Investment Position*

Much of Canada's development has been financed by investments of capital from other countries. Investments of external capital contributed a particularly important part to the national development which took place early in the twentieth century, as well as in previous periods. The nature of the Canadian economy has been such that large investments of capital in relation to population have been necessary for the development of some of the principal types of Canadian production. The growth of wheat exports, for example, was only possible after the investment of large amounts of capital in grain elevators, railways and other transportation facilities. Likewise, the development of the resources of the Laurentian Shield required heavy investments in power developments, mines, and pulp and paper plants. Then, too, some important branches of Canadian manufacturing, particularly in the durable goods industries, have been financed by United States companies where production involved large outlays as well as advanced research and industrial design.

The relative positions of British and United States capital in these developments have changed significantly in recent decades. In the period before the War of 1914-18 the major portion of external capital invested in Canada was British, investments in railways and government and municipal bonds occupying a prominent place. United States investments, however, during the First World War and in the inter-war years expanded rapidly and, even before 1926, considerably exceeded the amount of British capital invested in Canada. This great expansion in United States investments in the 1920's was widely distributed. Increases in investments in manufacturing and public utilities were large and a substantial part of these occurred in the field of branch plants which showed a notable growth during this decade. There were also marked increases in investments in other activities

*Prepared by C. D. Blyth, Chief of Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics.

such as mining and smelting, merchandising and financial institutions during these years and a large volume of bonds of Canadian governments and municipalities were floated or sold in United States markets. During the 1930's some reduction occurred in the amount of external capital invested in Canada through redemptions of Canadian bonds held abroad as well as in the value of direct investments.

A further growth in United States investments in Canada took place during the Second World War and by the end of 1945 these investments had reached a new peak, while British investments in Canada were sharply reduced by repatriations of securities during the War. The relative importance in this more recent period of the United States capital inflow in relation to domestic capital formation was less than in earlier periods of capital inflow. Much the larger portion of Canadian developments and activities during the recent war were financed from Canadian sources. The growth in the funded debt of the Federal Government during the Second World War which rose from \$3,300,000,000 in 1939 to \$16,800,000,000 at the end of March, 1946, resulted from sales of bonds to residents of Canada. Non-resident holdings of direct issues of the Canadian Government declined in the aggregate during this period although United States holdings rose. In addition, privately financed developments during the War relied on Canadian capital to a large extent. During the comparable period the value of United States investments of all kinds in Canada rose from \$4,200,000,000 in 1939 to close to \$5,000,000,000 at the end of 1945. There was also a small increase in other foreign investments in Canada but British investments declined sharply from \$2,475,900,000 to \$1,766,000,000. As a result of these divergent changes total non-resident investments increased from \$6,913,300,000 at the end of 1939 to \$7,095,000,000 at the end of 1945.

The balance of Canadian indebtedness to other countries was materially reduced during the recent War, because of the sharp rise in Canadian assets abroad which rose from about \$1,865,000,000 at the end of 1939 to around \$3,715,000,000 in 1945. When gross liabilities are taken into account the balance of Canadian indebtedness to other countries at the end of 1945 was around \$3,750,000,000 compared with over \$5,000,000,000 at the end of 1939 and over \$6,000,000,000 in 1930. The sharp rise in external assets was the result of the increase in official liquid reserves of gold and United States dollars and the extension of loans and export credits to the United Kingdom and other countries by the Canadian Government. Private investments abroad owned by Canadians declined slightly during the same period.

Changes which occurred in the balance of Canadian indebtedness in 1946 were not very great although the composition of assets and liabilities changed materially. The value of United States investments in Canada increased but there was a further decline in British investments. At the same time the value of Canada's official liquid reserves was less as a result of the loss of reserves in 1946 and the removal of the premium on United States dollars during the year following the restoration of the Canadian dollar to par. But more than offsetting this decline in reserves was the increase in loans and export credits extended by the Canadian Government, the net amount of credits having increased to \$1,362,000,000 at the end of the year.

Similarly, in 1947 important changes occurred in the composition of Canada's external assets and liabilities, although the change in net indebtedness was relatively less. Liquid reserves of gold and United States dollars declined \$743,000,000

during the year, but the indebtedness of overseas governments to Canada increased substantially by a net amount of \$454,000,000. Accordingly, Canada's net investment position with overseas countries improved while Canada's net indebtedness with respect to the United States dollar area increased. But some of the decline in liquid reserves accompanied redemptions of Canadian securities owned in the United States, and there was the gold subscription of \$74,000,000 to the International Monetary Fund.

British and Foreign Investments in Canada.—At the end of 1946 the total value of British and foreign investments in Canada was estimated at \$7,193,000,000. Investments held in the United Kingdom at that date had a book value of about \$1,688,000,000, a figure which includes British owned investments and also some investments held in the United Kingdom by nominees for residents of other countries. The book value of investments held in the United States at the same time was \$5,152,000,000. While generally indicative of American ownership, this total also includes an indeterminable amount of securities held in the United States by nominees for residents of other countries. The remaining amount of external capital invested in Canada, \$353,000,000, was owned in other overseas countries. The total investments in Canada owned in these other overseas countries would include therefore the \$353,000,000 plus the indeterminable amounts included in the British and United States total shown above.

A smaller proportion of the external investments in Canada at the end of 1946 was represented by holdings of Canadian bonds and debentures than was the case at the beginning of the recent War. Around 42 p.c. of total investments of external capital in Canada was in the form of bonds and debentures at the end of 1946 compared with about 56 p.c. in 1939. The proportionate decline was even greater in the case of British investments in Canada because of the official repatriations of Dominion and Canadian National Railway bonds. There was also a decline in the percentage of United States capital invested in bonds although actual holdings of bonds in the United States increased during this period. The proportion of total Canadian bonds outstanding which were held abroad was much less in 1946 than in 1939 because of the extent of the wartime financing of the Canadian Government through sales of bonds in Canada. Canadian bonds held in the United States made up about 21 p.c. of the total of almost \$10,000,000,000 of outstanding Canadian issues at the end of 1939, whereas, by the end of 1946, the United States holdings amounted to about 11 p.c. of the more than \$21,000,000,000 of Canadian bonds then outstanding.

Although there has been a substantial increase in the value of non-resident investments in Canadian businesses during the period since 1939 there have also been substantial expansions financed by Canadian capital. In 1939, non-resident ownership of Canadian manufacturing enterprises amounted to about 42 p.c. of the total capital invested. In the broader field of Canadian business—including mining, merchandising establishments, and railways and public utilities, as well as manufacturing, but excluding investments in agriculture and non-industrial real estate generally—the non-resident ownership was somewhat less, amounting to about 38 p.c. of the estimated capital employed. Comparable statistics on total capital employed in all forms of Canadian businesses are not available for the post-war period. But available data covering most investments in the manufacturing industry point to the non-resident proportion being somewhat less than the 42 p.c. which it represented in 1939.

An important group of United States investments in Canada is made up of the direct investments in branches and subsidiaries and other companies which are controlled in the United States. These direct investments in over 2,000 controlled businesses in Canada had a total value of \$2,423,000,000 at the end of 1946 compared with \$1,881,000,000 at the end of 1939. Although the increase of 29 p.c. in value in this period contrasts sharply with the moderate decline in this group of investments which occurred in the decade before the Second World War, the recent increase represents a smaller rate of growth than occurred during the period of most rapid expansion between 1926 and 1939, when the value of United States direct investments in Canada increased 42 p.c. A major part of the increased investments since 1939 has arisen from the reinvestment of earnings of branches and subsidiaries in Canada. The remainder of the increases resulted from direct transfers of capital from the United States.

More than one-half of the total United States direct investments in Canada are in the manufacturing industry. The United States controlled companies in the manufacturing field constitute only a minor part of the total investments in manufacturing concerns in Canada, possibly about one-quarter of the total. In the broader field of Canadian business, covering all industrial, mining and commercial concerns, and railways and utilities, the ratio of investments controlled in the United States is much less. The direct investments are widely distributed throughout a great many companies and the percentage of United States controlled companies varies considerably in different industries. Consequently, the substantial percentage of United States controlled companies in the manufacturing field should not be taken as an indication that Canadian industry in general is dominated by American controlled companies. In some industries such as the manufacture of automobiles, rubber goods, electrical appliances, and the refining of petroleum, as well as in the non-ferrous metal industries, United States controlled companies predominate. In other industries the American controlled units are less important and there are many industries and trades in which the leading firms and the predominance of control are Canadian; these include the primary iron and steel industries and cotton textiles and merchandising. In other branches of industry the United States controlled portion, while representing a large part, nevertheless shares the field generally with Canadian companies, as is the case in the pulp and paper industry and mining.

Total British investments of \$1,688,000,000 in Canada in 1946, including some investments held in the United Kingdom for owners living elsewhere, can be roughly divided into portfolio investments of \$1,258,000,000, direct investments of \$355,000,000 and miscellaneous investments of \$75,000,000. Most of the reduction in British investments in Canada during the War occurred in portfolio holdings of securities, particularly of Canadian Government and Canadian National Railways issues. More than one-half of the portfolio investments still held in 1946 was made up of holdings of public issues of stock in Canadian companies with a book value of \$730,000,000, the major part of which was made up of railway stock. Holdings of Canadian provincial, municipal and corporation bonds had an estimated par value of \$539,000,000 in 1946, including some relatively small amounts of bonds included

in the direct investment group. A large part of the direct investments in branches and subsidiaries was concentrated in certain fields of business such as insurance, textiles and other consumer goods industries.

² Includes some investments held in the United States and the United Kingdom for residents of other countries.

Canadian Assets Abroad.—Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and liquid reserves in foreign currencies, has risen from \$1,865,000,000 in 1939 to \$3,728,000,000 at the end of 1947. The principal factor in this increase has been the extension by the Canadian Government of loans and export credits to the United Kingdom and other countries. At the end of 1947, the total of Canadian Government credits outstanding was \$1,816,000,000. Included in this total are about \$368,000,000 outstanding on the 1942 loan to the United Kingdom, \$963,000,000 drawn on the 1946 loan to the United Kingdom, \$454,000,000 of post-war export credits and advances, and \$31,000,000 of other credits outstanding. In addition, at the end of 1947, official liquid reserves aggregated about \$511,000,000, including gold, official United States dollar balances, and sterling holdings of the Foreign Exchange Control Board. While these reserves, at that date, were still higher than at the end of 1939 they were considerably less than they were in 1945 and 1946. In addition, Canada had subscribed in 1946 and 1947 to the capital of the International Bank and the International Monetary Fund. By the end of 1947 subscriptions made by Canada to these institutions amounted to \$65,000,000 and \$300,000,000, respectively. A small part of the subscription to the Bank was in the form of convertible exchange and \$74,000,000 of the subscription to the Fund was in the form of gold. The remainder of both subscriptions was made in the form of demand notes of the Canadian Government or in Canadian funds.

Besides the officially owned assets referred to above there were the privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939 these privately owned assets constituted most of the total value of Canadian assets abroad, whereas, since the end of the recent War they have amounted to only a minor part of the total chiefly because of the sharp rise in officially owned assets. Total privately owned investments abroad have declined in value since 1939 because of the liquidations of Canadian holdings of United States securities. Portfolio holdings of foreign securities owned in Canada have been reduced from \$719,000,000 at the end of 1939 to \$551,000,000 at the end of 1946. This decline is less than the total sales of these securities by private investors during the period, as there was a considerable increase in the book value of holdings of United States stocks. Appreciable gains have occurred in the value of Canadian direct investments in businesses outside of Canada which had a value of \$772,000,000 at the end of 1946 compared with \$671,000,000 at the end of 1939.

7.—Canadian Assets Abroad, 1930, 1939, 1945 and 1946

NOTE.—Excluding investments of insurance companies.

The privately owned Canadian investments abroad are chiefly in the United States, the total value of investments in that country at the end of 1946 being \$829,000,000. At the same time investments in other foreign countries, chiefly in Latin America, were \$301,000,000, while investments in the United Kingdom were \$111,000,000, and in other Empire countries \$82,000,000. These figures of investments exclude the investments abroad of Canadian insurance companies and banks, as well as the official assets referred to above, and certain small amounts of miscellaneous investments which are difficult to evaluate.

Section 3.—Corporation Profits**Profits of Corporations, and Net Income to Stockholders**

Beginning with this edition of the Canada Year Book, this Section on corporate profits will consist of estimates covering all corporations, included in the statistics of National Income prepared by the Dominion Bureau of Statistics. Figures for the years 1944, 1945 and 1946 are based on the reports "Taxation Statistics" published in 1946, 1947 and 1948 by the Taxation Division, Department of National Revenue. These reports cover practically all taxable corporations and the data required only minor changes to make them conform with the definitions used for national income estimates. For the years prior to 1944, estimates of corporate profits were made using data on tax collections and tax rates supplied by the Department of National Revenue. In the 1947 Year Book at pp. 1054-1059 statistics of Canadian corporation profits were given for the years 1936-45. These statistics were taken from the statistical summary of the Bank of Canada and were based on the financial statements of 709 corporations. The change from a sample basis to complete coverage will give a more accurate indication of trends, besides showing aggregates applicable to the whole corporate sector.

Because of the importance of the rate of taxation in determining the income available for dividends and surplus, a brief description of the changes during the war years 1939-45 is given here. More detailed information can be found in the reports "Taxation Statistics" referred to above. The corporation income tax rate which was 15 p.c. in 1938 and 1939 was raised to 18 p.c. in 1940, and remained

unchanged until Jan. 1, 1947, when it was increased to 30 p.c. From Jan. 1, 1940 to Dec. 31, 1947, corporations were also subject to a tax on excess profits, details of which are as follows:

<i>Calendar Year</i>	<i>Excess Profits Tax on Corporations</i>
1940.....	12 p.c. of total profits or 75 p.c. of excess profits, whichever is greater.
1941.....	22 p.c. of total profits or 75 p.c. of excess profits, whichever is greater.
1942.....	First six months—same tax rate as 1941.
1942.....	Second six months—12 p.c. of total profits <i>plus</i> either 10 p.c. of total profits or 100 p.c. of excess profits, whichever is greater.
1943.....	12 p.c. of total profits <i>plus</i> either 10 p.c. of total profits or 100 p.c. of excess profits, whichever is greater.
1944.....	Unchanged from 1943.
1945.....	Unchanged from 1943.
1946.....	22 p.c. of total profits <i>plus</i> 20 p.c. of excess profits; beginning this year "excess profits" are defined as profits in excess of 116½ p.c. of standard profits.
1947.....	15 p.c. of excess profits.
1948.....	No tax payable.

NOTE.—Refundable Portion—From July 1, 1942, to Dec. 31, 1945, those companies taxable at the 100 p.c. rate on excess profits were entitled to a refund of a portion of the taxes paid. The refundable portion is defined as 20 p.c. of all profits in excess of 116½ p.c. of standard profits.

Corporation profits, before taxes and dividends, reached a wartime peak in 1942, declined in 1943 and 1944, and then rose to all-time highs of \$1,421,000,000 in 1946 and \$1,821,000,000 in 1947. From 1939 to 1947 the increase was 195 p.c. Because of the sharp increase in the rate of taxation after 1940, however, income after taxes showed a more moderate increase of 101 p.c. between 1939 and 1947. Taxes reached a peak in absolute amount in 1943 when \$642,000,000 was collected out of total profits before taxes of \$1,302,000,000. This figure of taxes collected does not include the refundable portion of excess profits tax. With the abolition of the excess profits tax on Jan. 1, 1948, the tax rate dropped to 30 p.c. of profits, considerably below the wartime peak, but double the 1938 rate of 15 p.c.

Cash dividends paid to stockholders were maintained at a fairly moderate figure. It should be noted that the figure for dividends paid out does not include dividends paid to Canadian corporations, since intercorporate dividends cancel out for the corporate sector as a whole.

Undistributed profits, that is, profits after taxes and dividends, reached a peak of \$608,000,000 in 1947. This, together with \$359,000,000 in depreciation charges gives a total of \$967,000,000 available for replacement and expansion of plant and equipment, and for building up inventories. Comparable figures for 1944, 1945 and 1946 were \$691,000,000, \$666,000,000 and \$729,000,000, respectively. Companies were thus in a favourable financial position to undertake capital investment and inventory expansion as soon as conditions permitted. Unfortunately, investment

figures are not published separately for corporations, but data on Canadian gross home investment indicate that capital investment reached a record high in 1947, with a large part of this expansion being financed by corporation earnings.

Analysis by Industries.—Most industries showed little change in net profits from 1944 to 1945, but there was a 15 p.c. increase in profits before taxes from 1945 to 1946. The pulp and paper industry showed the largest absolute increase in profits, jumping from \$74,000,000 in 1945 to \$138,300,000 in 1946; while retail trade changed from \$117,800,000 to \$148,800,000 in the same two years. Only two groups—forestry and other mining—showed a loss in any of the three years for which data are available. Of the relatively few industries which showed decreases from 1945 to 1946, the two most important were the gold mining industry and the transportation equipment industry.

Net income after taxes shows much the same pattern as before taxes, although because of the drop in the 1946 tax rate, 1946 net income after taxes was 24 p.c. above that for 1945, as compared with 15 p.c. before taxes.

9.—Profits, Taxes and Dividends of Canadian Corporations, 1938-47

NOTE.—Corporate profits before taxes include corporate taxable income, depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts, and conversion to a calendar-year basis.

¹ Refundable excess profits taxes of \$68,600,000 in 1944, \$67,500,000 in 1945 and \$17,800,000 in 1946 were not included in taxes deducted.

² Total profits of all corporations, as presented in Table 9 differ from the total of all corporations as shown here since for National Income purposes charitable donations and depletion charges are added back to profits, and adjustments are made for renegotiation of war contracts, and conversion to a calendar-year basis.

Section 4.—Estimates of National Wealth

Owing to the abnormal economic conditions that have prevailed over the past fifteen-year period, no official estimate for national wealth has been made since that of 1933 which measured economic conditions at the lowest point of the pre-war depression. It is not considered desirable to establish another basis of national wealth until conditions have become normal. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

Subsection 6. Decontrol of the Economy	1118		

A dominant element conditioning Canada's economic development since the end of the Second World War has been the transfer of about one-half the human and physical resources of the country from a wartime to peacetime basis. The progress made has been recorded in the Year Books published from 1944 to 1947 in Chapters entitled "Post-War Reconstruction and the Rehabilitation of Ex-service Personnel," and later "Post-War Reconstruction". The transfer of resources to peacetime use is now largely an accomplished fact. It is proposed to review this post-war reconstruction effort for the last time in this Year Book in the Sections that follow.

Section 1.—The Federal Program of Reconstruction

The abnormal, temporary phenomena that have characterized the past few years as a "reconstruction" period are (1) re-employment of war veterans and war workers in peacetime pursuits; (2) reconversion of plant and equipment to peacetime use; (3) liquidation of the war production program; and (4) relaxation and abolition of wartime controls. Although almost all Departments of the Federal Government have participated in the reconstruction program, the agencies most concerned have been the Department of Reconstruction and Supply (see Subsection 2, pp. 1114-1115), Department of Veterans Affairs, the Wartime Prices and Trade Board and the National Employment Service (Chapters XXIX, XXII and XVIII describe the work of these last Departments).

Subsection 1.—Planning for Reconstruction

The transfer of manpower and industrial resources from a wartime to a peacetime basis was carried through successfully, partly because the economic environment was favourable, and partly because the task was thoroughly planned and the facilities needed to execute it were provided. The Federal, Provincial and Municipal Governments, and industry and labour made plans to cope with their respective reconstruction problems and contributed suggestions to Dominion agencies engaged in planning to enable the separate schemes to be co-ordinated within the national framework (see Section 2).

* Prepared by the Economic Research and Development Branch, Department of Trade and Commerce.

Federal Government planning for the post-war transition period began with the outbreak of hostilities in 1939 and was continued throughout the war period by the Cabinet Committee on Demobilization and Re-establishment, the Advisory Committee on Economic Policy, the Advisory Committee on Demobilization and Re-establishment and the Advisory Committee on Reconstruction. The Advisory Committee on Reconstruction had a full-time secretariat and sub-committees for agricultural policy, conservation and development of natural resources, post-war reconstruction, housing and community planning, post-war employment opportunities, and special post-war problems of women. The House of Commons established a Committee on Reconstruction and Re-establishment and the Senate a Committee on Economic and Re-establishment and Social Security.

The Federal Government program for reconstruction was set out in the White Paper on *Employment and Income* in April, 1945, and re-stated in more concrete terms in *Proposals of the Government of Canada* prepared for the Dominion-Provincial Conference on Reconstruction which met in August, 1945.

The fiscal arrangements proposed by the Federal Government to implement the program were not acceptable to the Provincial Governments and the Conference adjourned in April, 1946, *sine die*. The failure of the Conference to reach over-all agreement delayed the implementation of certain proposals, such as those dealing with joint action on social security matters and public investment programs.

Subsection 2.—The Department of Reconstruction and Supply

The Department of Reconstruction and Supply has been responsible for co-ordinating the action of government departments and agencies to ensure a quick and smooth transition from a wartime to a peacetime economy. The Department was created in December, 1945, by a merger of the Department of Munitions and Supply, established in April, 1940, and the Department of Reconstruction, established in June, 1944. The functions of the Department have been twofold: firstly, to liquidate the Government's commitments arising out of, and following the conclusion of, the War and, secondly, to assist in formulating plans designed to maintain a high level of employment and income in Canada in the transition period and the years to follow.

However, as the reconstruction of the economy on a peacetime basis neared completion and emphasis shifted toward further economic development on a continuing basis, a number of functions developed by the Department were transferred to other agencies. Of the specialized organizations for which the Department has been responsible, a number, as indicated below, are now under other departments or agencies.

The Research and Development Branch.—This Branch, which was transferred to the National Research Council early in 1947, developed a technical information service to make available to industry the results of government and other research, encouraged research not undertaken by government departments, and aided in the development of means of measuring, and appraising the significance of, research expenditures in Canada (see Chapter IX, p. 334).

The Air Development Branch.—The Air Development Branch which was transferred to the Bureau of Transport Economics of the Board of Transport Commissioners, was responsible for initiating a nation-wide survey of the extent of inter-community travel between important Canadian cities.

In December, 1948, there took place a major readjustment of the Department's functions. Responsibility for the Economic Research Branch, Crown companies other than Central Mortgage and Housing Corporation, and the remaining commodity controls (steel, timber, building priorities) was transferred to the Department of Trade and Commerce. The Department of Reconstruction and Supply retained the Public Projects Branch and Central Mortgage and Housing Corporation, and took over administration of the Canadian Government Travel Bureau from the Department of Trade and Commerce and of the National Film Board from the Department of National Revenue. The change allowed the Department to concentrate attention to a greater extent on the Federal construction and housing programs, including the housing projects of the Armed Services.

The Public Projects Branch.—The Public Projects Branch which remained under the Department of Reconstruction and Supply, implements the Federal Government's public investment policy, being concerned with the screening of construction projects proposed for inclusion in Federal Estimates, the approval of projects brought under the special projects vote, and the assembly of a "shelf" of postponable but fully planned public projects. This Branch in 1947 absorbed the Resources Development Branch, charged with formulating policies for the development of natural resources.

Upon assuming control of commodity controls, the Department of Trade and Commerce set up a Commodities Branch to administer the timber control and building priorities, as well as the Export and Import Divisions, the Export Permit Branch and the Transportation and Communications Division. The newly transferred Economic Research Branch was incorporated with the Industrial Development Division of the Department of Trade and Commerce to form the Economic Research and Development Branch. Its functions as an economic intelligence unit were integrated more closely with the foreign trade intelligence work of this Department to aid in the provision of a continuing review of both domestic and external developments affecting the country's economic welfare.*

Subsection 3.—Re-employment of War Veterans and War Workers

Peak civilian war employment was reached in the autumn of 1943 when an estimated 1,400,000 out of about 4,300,000 workers were engaged on war work. Peak Armed Forces strength was reached a year later with about 780,000 men and women in uniform. The contraction of war employment was practically completed by the spring of 1946 and, by the end of the year, the Armed Forces were reduced to 43,000 members, approximately a peacetime footing. Despite the high rate of release, unemployment, as reflected by the number of unplaced applicants registered with the National Employment Service, did not rise above 270,000 or about 4 p.c. of the working force. The maximum number of unplaced war veterans of the Second World War was reached in March, 1946, at 72,500, a large proportion of whom had been registered at the Employment Service less than 15 days. This represented less than 15 p.c. of all veterans discharged in the preceding year.

The National Employment Service was the principal agency engaged in placing war veterans and war workers in employment. Many, however, found jobs on their own in the strong labour market that then existed, while a considerable proportion of war workers were transferred to peacetime work without change of jobs when the firms with which they were employed were converted to peacetime production.

* *Private and Public Investment in Canada, Outlook, 1948; Private and Public Investment in Canada, Mid-Year Survey, 1948; and Production of Basic and Building Materials in Canada, Outlook, 1948*, are publications of this Branch.

The rehabilitation of war veterans, apart from placement in employment, was handled by the Department of Veterans Affairs. The war veteran was entitled to a clothing allowance, rehabilitation grant, war service gratuity, supplementary gratuity for service outside the Western Hemisphere, a re-establishment credit or, alternatively, to assistance in obtaining vocational or university training or to set himself up in agriculture or commercial fishing. The veteran was also entitled to re-instatement in the job he was in at the time he joined the Armed Forces; to an out-of-work allowance until he obtained a job; and, after 15 weeks of continuous civilian employment, he became entitled to unemployment insurance assistance based on the period of his Service. Veterans attempting to establish themselves in business on their own were entitled to an "awaiting returns" allowance if encountering difficulty in supporting themselves. Extensive medical and rehabilitation services were also provided for veterans whose employability has been affected by their war service. (See Chapter XXIX.)

The rehabilitation of war veterans into civilian life was carried through smoothly and with little friction. Among the reasons for this were: the spreading of demobilization over a longer period of time than after the First World War; the provision of assistance on a generous and comprehensive scale and with emphasis on rehabilitation; extensive consultative facilities (through the Department of Veterans Affairs and the Employment Service) to deal with the veteran's problems on an individual basis; and a prolonged period of high employment during which the veteran had time to consolidate his position as a civilian. It should also be noted that, owing to improved standards of education as well as to technical training while in the Services, veterans generally were more skilled than the veterans of the First World War, which improved their opportunities for employment.

Subsection 4.—Reconversion of Plant and Equipment

During the course of the War approximately 14,000 companies and individuals entered into prime contracts with the Department of Munitions and Supply to provide war supplies, 13,000 of these to provide general stores and 1,400 to provide technical stores. Many of these contractors, in turn, entered into sub-contracts with others to supply materials or parts needed to execute contracts. In a number of cases, and particularly with respect to technical stores, it was necessary to install additional equipment and to make changes in production methods to execute contracts or sub-contracts. In the process, many plants almost completely abandoned their civilian production. In addition, a number of the largest plants in operation in Canada when the War ended had been built specifically to make war goods.

Most of the companies extensively engaged in war production had plans fully prepared for industrial reconversion. Sample surveys conducted by the Department of Reconstruction and Supply indicate that one-half of the reconversion work was completed by March, 1946, and all but a small percentage by the middle of 1947.*

Subsection 5.—Liquidation of the War Production Program

The liquidation of the war production program involved: (1) cancellation and settlement of incompleted war contracts, (2) the renegotiation of some contracts, (3) the disposal of Government-owned war material and stores and of plant and equipment in excess of peacetime need, and (4) the winding-up or reconstituting of Crown Companies established during the War.

* Results of the most comprehensive survey were published in *Reconversion, Modernization and Expansion, Progress of Programs in Selected Canadian Manufacturing Industries, 1946-1947*, Economic Research Branch, Department of Reconstruction and Supply.

Cancellation and Renegotiation of Contracts.—Provision was made during the war years for the speedy termination of incompleted war contracts when the War ended, and for interim or partial payments pending final settlement of claims on the completed parts of the contracts. War contracts cancelled in the closing phases of the War and immediately thereafter involved \$2,500,000,000. By the end of 1948, the Contracts Settlement Board of the Department of Reconstruction and Supply had received over 3,250 termination-of-contract claims for more than \$300,000,000 from prime contractors and had approved them for settlement with disallowances of \$10,000,000.

Whenever it was considered that a contractor had made profits on his war contracts, as a group, in excess of a fair and reasonable rate, the Government had the power, through the Financial Adviser of the Department of Reconstruction and Supply, to renegotiate the terms of the contracts. Renegotiation reduced the amount paid out on war contracts by over \$475,000,000.

Surplus Assets.—When the War ended, the Government had on hand much material procured for war purposes that immediately became surplus but had definite peacetime value. This included such things as food, clothing, barrack-room stores, trucks, aeroplanes, watercraft, military establishments and some \$700,000,000 worth of Crown-owned war plants, machinery and equipment. Part of the surplus material was in Canada and part in theatres of war.

Power to dispose of these surpluses was exercised by the Minister of Munitions and Supply and later by the Minister of Reconstruction and Supply. A Crown Assets Allocation Committee laid down disposal policy, the Director-General of War Surplus cleared war plants, and the War Assets Corporation directed details of disposal. By the end of 1948, the Federal Government had realized \$450,000,000 from disposal of surplus goods.

One of the most important features of the disposal program was the making available to industry of the industrial plants formerly occupied by Crown Companies. This involved the disposal of the 33,500,000 sq. ft. of floor space in 170 Crown plants and plant extensions. By Jan. 1, 1949, 45 p.c. had been wholly or partly sold; 4 p.c. leased; 4 p.c. subdivided for multiple-tenancy by small businesses; 34 p.c. was retained permanently by the Government; 1 p.c. was being used by War Assets Corporation for storage, some part of which would be retained permanently by the Government; 1 p.c. was up for sale or other disposal; and 11 p.c. had been dismantled.*

Dissolution of Crown Companies.—Related to some extent to the disposal of Crown plants was the winding up or reconstituting on a peacetime basis of a number of Crown Companies, some engaged in production and others in procurement. All but three of these Companies operated under the Department of Munitions and Supply.

Twenty-three of these Crown Companies have been wound up and their charters surrendered. (For a list of the Companies referred to, see the 1947 edition of the Year Book, pp. 1107-1108.) Certain continuing rights and obligations of Wartime Oils, Limited, have been handed over to the Department of Mines and Resources, and two other Companies—Aero Timber Products, Limited, and War Supplies, Limited—are inactive but have not yet surrendered their charters. Companies that were absorbed into other Crown Companies were: Fairmont

* See *Disposal and Peace-Time Use of Crown Plant Buildings*, Economic Research Branch, Department of Reconstruction and Supply.

Company Limited (later Polymer Sales and Service, Limited), absorbed by Polymer Corporation for the purpose of settling liabilities; Veterans Housing (Ottawa), Limited, and Veterans Housing (Toronto) Limited, absorbed by Wartime Housing, Limited, which, in turn, was absorbed by Central Mortgage and Housing Corporation.

Crown Companies established during the War whose work is not yet completed are: Canadian Sugar Stabilization Corporation (formerly the Wartime Food Corporation) and Commodity Prices Stabilization Corporation Limited, both associated companies of the Wartime Prices and Trade Board; the Malton Water Company, which leased its rights to a private company with option to purchase; the War Assets Corporation; and the Park Steamship Company, Limited, which was continued as a ship-selling agency for War Assets Corporation. Several other Crown Companies established during the war years that will continue to function on a peacetime basis are mentioned in the Introduction at p. xxxii.

Subsection 6.—Decontrol of the Economy

When the War ended, strong inflationary forces were latent in the national economy. The experience of previous wars, and particularly of the First World War, was that inflationary effects and other maladjustments in the economy had their most disrupting influence after rather than during hostilities. The principle adopted by the Government, therefore, was to retain the system of controls and utilize it to redirect resources to civilian production and to hold inflationary pressures in check in order not to disrupt the prices mechanism too severely. As early as the situation warranted, however, specific controls were to be dropped.

The extraordinary powers to continue controls were based, in the first instance, on the War Measures Act, then on annual Emergency Transitional Powers Acts. Every Department of the Government has had a hand in the decontrol program. The problems of decontrol were not easy to solve. Not only was there the problem of timing the relaxation of a control with due regard to demand and supply considerations, but the additional problem of minimizing secondary effects. Most controls had been designed, in part, to complement and to be complemented by other controls, thereby obtaining as comprehensive a coverage as possible. In dismantling the structure the sequence in which controls were relaxed and dropped had to be considered lest the whole structure collapse. This decontrol program is referred to in detail in Chapter XXII. Its principal parts were as follows:—

Prices and Production and Import Subsidies.—By November, 1947, only a small range of items were still under price control, the most important being residential rents. A number of food products were subsequently brought under control again as their prices showed a marked tendency to rise following the imposing of austerity measures. The last of the subsidies paid for price control purposes were discontinued in August, 1948.

Food Rationing and Restrictions on Consumer Credits.—The relaxation and discontinuance of ration controls over foods that were scarce in relation to domestic and overseas demand began in 1946 and was completed in November, 1947; restrictions on consumer credits were discontinued in January, 1947.

Allocation Controls.—The relaxation of controls over the production and distribution of raw materials, fuels and finished goods started before the War ended and proceeded throughout 1946 and the first part of 1947. At the end of 1948, however, it was still found advisable to retain allocation controls over steel,

timber and building materials, to use priorities to ensure an adequate supply of building materials to priority projects, and to maintain an "equitable distribution" policy on many types of consumer goods to ensure established firms of a fair share of production.

Export, Import and Foreign Exchange Controls.—There was a progressive relaxation of these controls after the War ended. However, in the face of the high level of economic activity in Canada and the deterioration of economic conditions in most parts of the world, the system of controls has been retained to protect Canada's position in the field of international trade. These controls are now exercised under special legislation—the Export and Import Permits Act (11 Geo. VI, c. 17) and the Foreign Exchange Control Act (10 Geo. VI, c. 53). The War Exchange Conservation Act, 1940, was allowed to lapse at the end of 1947.

Labour Controls.—Wage controls were dropped in November, 1946, the last of the controls over employment in April, 1947, while wartime labour-management regulations were allowed to lapse in May, 1947, in so far as they applied to labour relations falling within provincial jurisdiction.

The object of the Government—a gradual and orderly relaxation of wartime controls so as to assist the national economy to make the transition to a peacetime basis without undue dislocation—was attained. One hope in timing the rate of decontrol was that the international price level would have reached an initial stability before the major part of the controls were dropped, thereby avoiding the economic problems of adjustment to falling prices. This hope was not realized and there was a marked rise in domestic prices throughout 1947 and 1948 to record heights.

Section 2.—Provincial Programs of Reconstruction

All Provincial Governments undertook post-war reconstruction planning during the war years, the results of which have been evident in new administrative agencies to foster economic, social and cultural development as well as to furnish greater facilities to assist industry and to provide for the welfare of the people.

The scope of provincial planning was broadly based. Although the emphasis varied with regional circumstances, planning included resource development, the problems of industry and trade, social welfare, and public finance. Attention was given to the need to conserve, and sometimes to reclaim land, forest, mine and fish resources and to ways of providing for their more orderly utilization. Ways and means of coping with the problems of the primary industries, and particularly of the farming and fishing communities, were explored and recommendations were made on such subjects as land use, soil erosion, flood control, irrigation, reforestation, land settlement, market possibilities, and trade and price practices. Potential fields for the growth of secondary industries through the availability of raw materials and power, new production techniques and processes for expanding domestic and foreign markets were considered as were also the possibilities of increasing tourist trade. As an aid to the growth of primary and secondary industries, most provincial planning bodies gave consideration to such matters as rural electrification, more and better transportation facilities, means of supplementing existing credit facilities and the need for better research and development facilities. In the field of social services, the more important subjects considered were education (provision of both schools

and teaching staffs), housing and community planning, and public health and welfare. Finally, Dominion-Provincial relations were widely considered with particular reference to the ability of provincial and municipal authorities to finance extensive reconstruction programs.

Subsection 1.—Recent Planning for Reconstruction

Before hostilities ended most Provincial Governments had set up general planning, administrative planning, and technical inquiry committees to deal with reconstruction problems. A short résumé by provinces follows:—

Prince Edward Island.—A Provincial Advisory Reconstruction Committee composed of representatives of the Government and of private interests was appointed in 1944. Sub-committees were appointed under the direction of the Advisory Committee to carry on much of the work.

Nova Scotia.—Nova Scotia's planning was directed by a Cabinet Committee on Rehabilitation. A Royal Commission on Provincial Development and Rehabilitation undertook a general survey of post-war problems, while a committee on the Rehabilitation of Agriculture and the Nova Scotia Economic Council supplemented its work in more technical fields.

New Brunswick.—A Committee on Reconstruction composed of representatives of Government and private interests was set up in the Province during the war years. Much of the work of this Committee was carried on through sub-committees.

Quebec.—Both the Legislative Council and an Economic Advisory Board of Government and private representatives studied reconstruction problems in Quebec, while detailed planning of post-war programs was undertaken by government departments.

Ontario.—Reconstruction planning in Ontario was undertaken by a number of committees, with co-ordination, direction and review provided by an Inter-Departmental Committee on Conservation and Rehabilitation. Agricultural problems were considered by a Committee on Agricultural Policy and an Agricultural Enquiry Commission, with the latter finally absorbing the work of the former. A Royal Ontario Mining Commission investigated and reported on the problems of the mining industry. A Social Security and Rehabilitation Committee undertook consideration of more general reconstruction problems. Its work was taken over by the Department of Planning and Development.

Manitoba.—In Manitoba, a Special Select Committee of the Legislature and a Post-War Reconstruction Committee (all Provincial Deputy Ministers) were concerned with broad general planning, and an Advisory Committee on Co-ordination of Post-War Planning gave leadership to and enlisted the co-operation of citizen groups in post-war planning. A sub-committee of the Cabinet exercised powers of review and decision on reconstruction plans. Committees of a semi-technical character were the Manitoba Electrification Enquiry Commission, the Joint Universities Studies Group (from Universities of Manitoba and of Minnesota, U.S.A.), both private agencies, and the Advisory Committee on Rehabilitation Training.

Saskatchewan.—In the Province of Saskatchewan representatives of Government and of private interests formed a Reconstruction Council in October, 1943, to deal with reconstruction problems. The Council appointed sub-committees to carry on much of the work.

Alberta.—Alberta's general planning was undertaken by a Post-War Reconstruction Committee, composed of Government and private representatives, and received technical assistance from the Research Council of Alberta. A Post-War Survey Management Committee undertook a broad economic survey of the Province to ascertain post-war production facilities and consumer demand. The Department of Public Works also had a Veterans' Welfare and Advisory Committee to assist ex-service men.

British Columbia.—In British Columbia, the legislature participated in post-war planning through a Post-War Rehabilitation Council, while Government planning was handled by an Inter-Departmental Advisory Committee on Industrial Development.

Subsection 2.—Implementation of Plans

Provincial reconstruction plans of an economic nature formulated during the war period have been implemented only in part as yet. Many short-term projects have been postponed or carried through more slowly than expected because shortages of manpower, materials and equipment have made it difficult or inadvisable to expedite them. The execution of some of the more ambitious long-range economic plans has been affected by the inability of Provincial and Federal Governments to reach a general agreement on Dominion-Provincial relations. This consideration has also resulted in modifications of plans in the social and public welfare fields.

What may prove to be one of the most significant developments of the reconstruction studies undertaken in the war period has been the emergence of provincial agencies the primary function of which is economic planning and co-ordination of planning at the policy level. Among these agencies can be included the Department of Dominion-Provincial Relations in Manitoba; the Department of Federal and Municipal Relations in New Brunswick; the Department of Reconstruction in Prince Edward Island; the Saskatchewan Economic and Advisory Board, composed of certain provincial Ministers assisted by a secretariat; and the Bureau of Reconstruction under a committee of the British Columbia Executive Council, which is assisted by an Inter-Departmental Committee on Industrial Development. The Ontario Department of Planning and Development and the Alberta Department of Economic Affairs perform a similar policy-formulation function but their duties also involve important administrative work.

Accompanying the above development, the administrative organizations of Provincial Governments have been expanded to permit greater attention to the encouragement of secondary industry (Subsection 3 below) and the provision of social welfare facilities and assistance (Subsection 4). Less marked but nevertheless evident, has been the extension of Provincial Government services for the primary industries (Subsection 5).

Subsection 3.—Assistance to Secondary Industries

Three provinces established departments to deal with problems of the secondary industries in the mid-1930's. These, under their present names, were the Department of Trade and Commerce in Quebec, the Department of Industries and Labour

in Alberta, and the Department of Trade and Industries in British Columbia. Nova Scotia started a Department of Trade and Industry shortly before the War. In Manitoba, the Industrial Development Board, a private organization supported in part by public funds, encouraged industrial expansion.

During and since the War, the following Provincial Government agencies have been established to deal with problems of secondary industries: the Department of Industry and Reconstruction in New Brunswick; the Department of Planning and Development (and less directly the Bureau of Statistics and Research of the Provincial Treasurer's Office) in Ontario; the Bureau of Industry and Commerce of the Department of Mines and Natural Resources in Manitoba (with legislative authority on the statute books providing for a Department of Industry and Commerce); the Department of Natural Resources and Industrial Development and the Department of Reconstruction and Rehabilitation in Saskatchewan. In addition to the continuing pre-war Department of Industries and Labour, Alberta has established a Department of Economic Affairs which concerns itself with certain industrial problems, with cultural and social welfare developments and with broad general planning. Only one province, Prince Edward Island, has not established an agency for dealing with the problems of secondary industry, but the Province's Department of Reconstruction has undertaken to encourage industrial development.

Although the work of the Departments mentioned above varies from province to province, their primary functions are twofold: to help create an environment favourable for economic development and the growth of secondary industries, and to provide assistance to industry in coping with specific problems.

Assistance to industry usually takes the form of advice on economic and industrial matters, and advice or assistance with engineering problems. Some Provincial Departments have also helped industry in procuring materials and finding markets, while four provinces make provision for financial assistance to industry in the form of loans or bond guarantees. These provinces are Nova Scotia; Saskatchewan, through a Reconstruction and Rehabilitation Fund; Alberta, under the Industrial Corporation Act and Provincial Industries Development Act; and British Columbia through an Industrial Development Fund. It should also be noted that a number of provinces have made greater provision for financial assistance to primary industries, particularly fishing, since the end of the War.

The encouragement of economic development and the growth of the secondary industries takes such forms as the collecting of statistical and factual information, the making of economic and industrial surveys, exploring the possibility of greater utilization of natural resources and greater processing of primary products, investigating the applicability of new industrial techniques and processes by provincial industry, and efforts to expand domestic and foreign markets.

Among the economic and industrial surveys undertaken by provinces since the end of the War are comprehensive economic and industrial surveys on a provincial basis being made by Quebec, Manitoba, and Alberta; regional surveys undertaken in British Columbia; the mineral resources survey and directory of information on

manufacturing industries made by Nova Scotia; the watershed surveys made by Ontario; and the economic, sanitation and ground-level survey of the area adjacent to Charlottetown made by Prince Edward Island.

Provincial assistance to research has been increased as a result of greater interest of the provinces in the ways and means of making a more effective utilization of their resources. Before the War, only Ontario and Alberta had independent scientific research councils and Nova Scotia had an economic research council. Ontario's Research Foundation, which is concerned primarily with applied research, is now complemented by the Ontario Research Council, while British Columbia and Nova Scotia have set up research councils, with the council of the latter Province combining with scientific research the economic research formerly undertaken by the Province's Economic Research Council. New Brunswick has reconstituted its Forest Operations Commission with wider terms of reference as the Natural Resources Development Board. Saskatchewan's Department of Reconstruction and Rehabilitation has established an investigational laboratory.

To encourage industries to locate within their borders and to help find markets for each province's own products, all provinces carry on a certain amount of promotional work. This work is frequently associated with the promotion of tourist trade. All provinces had agencies responsible for publicity work and the encouragement of tourist travel before the War. Certain significant administrative changes have been made since the end of the War: Ontario has raised its Bureau of Travel and Publicity to the status of a Department; Manitoba's Department of Mines and Natural Resources has added a Bureau of Travel and Publicity to work closely with the Bureau of Industry and Commerce; Nova Scotia has transferred its Bureau of Information from the Department of Highways and Public Works to the Department of Trade and Industry, which was known for several years prior to 1948 as the Department of Industries and Publicity; Alberta's Publicity and Travel Bureau has been transferred from the Department of Trade and Industry to the Department of Economic Affairs. In 1948, resident representatives were being maintained by Ontario, Saskatchewan and British Columbia in the United Kingdom, and Alberta was contemplating a similar move. Representatives were also placed in Ottawa by Quebec and Alberta; in Toronto by Alberta; and in New York, U.S.A., by Quebec.

As part of their interest in the encouragement of industry, all the provinces have given increased attention to the extension of electric power facilities, particularly to smaller urban centres and rural areas. Prince Edward Island, Quebec, Alberta and British Columbia made legislative provision during the war years for power commissions to produce and distribute electric energy. The other five provinces have commissions which pre-date the War. Quebec created a Department of Hydraulic Resources; the Commissioner of the New Brunswick Electric Power Commission became a member of the Province's Executive Council, and Saskatchewan and Quebec established committees on rural electrification.

Subsection 4.—Developments in the Welfare Field

As a result of experiences in the pre-war depression period, wartime planning for increased social security, and the immediate need to help provide assistance in rehabilitating war veterans and war workers in civilian employment, there has been a notable increase in services provided in the social welfare and labour fields. As the amount of service provided has increased, Provincial Government agencies have been re-grouped with the result that health, social welfare and labour problems are now more widely recognized as of departmental importance.

Since the beginning of the War, four provinces have created new departments in the welfare field and three others have reconstituted departments so as to establish a separate welfare department. The newly created departments are: Nova Scotia's Department of Public Welfare; Quebec's Department of Social Welfare and Youth; Alberta's Department of Public Welfare; and British Columbia's Department of Health and Welfare (and a Public Health Insurance Commission). The changes in the other three provinces include: the replacing of the Department of Education and Public Health of the Province of Prince Edward Island by the Departments of Health and Welfare and of Education; the replacing of the Department of Health and Labour of New Brunswick by the Department of Health and Social Services, and the Department of Labour; and the reconstituting in Saskatchewan of the Bureau of Labour and Public Welfare of the Department of Municipal Affairs, to establish the Department of Social Welfare and the Department of Labour.

In addition to the departmental changes in New Brunswick and Saskatchewan which give greater departmental recognition to labour problems, Manitoba also replaced its Department of Public Works and Labour by the Department of Public Works and the Department of Labour, while Alberta re-named its Department of Trade and Industry in 1948 as the Department of Industries and Labour.

An important secondary development in the social welfare field during and since the end of the War has been increased provision for community planning. All provinces, except Quebec, now have legislation covering this field. Powers under the legislation are vested in Municipal Affairs Departments in Nova Scotia, Saskatchewan and British Columbia, in the Department of Planning and Development in Ontario, the Municipal Commissioner in Manitoba, the Department of Public Works in Alberta, and Provincial Planning Boards in Prince Edward Island and New Brunswick. Alberta also has a Provincial Planning Board. All provinces, except Nova Scotia, have a governmental agency to provide assistance to municipalities in handling their community planning problems, and Nova Scotia discharges this function through its Planning Board. Prince Edward Island and Manitoba make grants to municipalities to assist them with their planning. Nearly all cities of over 30,000 population and about one-half of the cities of 5,000 to 30,000 population now have planning commissions.

Subsection 5.—Assistance to Primary Industries

The emergence of Provincial Government departments concerned primarily with assisting secondary industry is being paralleled by a more functional organization of departments concerned with the primary industries. This type of organi-

zation existed before the War to the extent that every province had a department concerned primarily with agricultural problems. Now the forestry, fishing and mining industries are receiving clearer recognition in the organization of departments. Among the changes that have helped to bring this about are: New Brunswick included a Division of Fisheries in its Department of Industries and Reconstruction; Quebec separated Game and Fisheries from Lands and Forests and incorporated with it the Maritime Fisheries Bureau of the Department of Mines to form a new Department of Game and Fisheries; Alberta transferred its Fish and Game Commission and Fisheries Division from the Department of Agriculture to the Department of Lands and Mines, and established a Natural Gas Utilities Board and coal marketing agency in the latter Department; and British Columbia raised its Forestry Bureau of the Department of Lands to divisional status and re-named the Department Lands and Forests. Other changes have also been made to provide additional or better service to the primary industries. Ontario and New Brunswick added bureaus to their Departments of Agriculture to deal with problems of credit unions and co-operatives, while Saskatchewan established a Department of Co-operatives and Co-operative Development. Nova Scotia established a Dairy Division in its Department of Agriculture. Quebec established a Dairy Industry Commission and a Farm Credit Office.

CHAPTER XXVIII.—DEFENCE OF CANADA*

CONSPECTUS

	PAGE		PAGE
SECTION 1. THE DEPARTMENT OF NATIONAL DEFENCE.....	1126	Subsection 3. The Royal Canadian Air Force.....	1134
SECTION 2. THE ARMED FORCES AND THE DEFENCE RESEARCH BOARD.....	1127	Subsection 4. The Defence Research Board.....	1137

Subsection 2. The Canadian Army.....	1132	SECTION 4. THE INDUSTRIAL DEFENCE BOARD.....	1140

Section 1.—The Department of National Defence

By Mar. 31, 1948, Canada's Department of National Defence had achieved a substantial degree of post-war consolidation. The task of repatriation and demobilization of Second World War troops had been completed. The three Services had been reduced in size to conform to new peacetime establishments and a program for organizing and training extensive reserve forces was well advanced.

Under a single Minister, charged with responsibility for all matters relating to defence, the Department pursued a service unification program aimed at: (1) the adoption of a unified defence program to meet agreed strategic needs; (2) a single defence budget under which funds and resources would be allocated in accordance with the program; (3) the elimination of duplication of services; (4) consistent and equitable personnel policies; (5) greater emphasis on defence research and closer co-ordination with other Government departments and with war industry.

Under direction of the Minister, Service command is exercised by the heads of the Services concerned.

In 1947 progress of the new defence organization was primarily along administrative lines, in keeping with an ever-changing international situation. Co-operation with other nations in matters of defence became increasingly effective. In all matters of international defence relations the first aim of Canadian policy was to prevent war.

The amalgamation of the three Departments and the co-ordination of the three Services began with the establishment of a single National Defence Headquarters at Ottawa. Within this Headquarters, allied components of the Navy, Army and Air Force were interwoven wherever compatible with the interests of efficiency and economy.

Councils and committees that now function with direct relation to the Department of National Defence and the unification program include:—

- (1) **Defence Council.**—*Composition*—Minister of National Defence (Chairman), Parliamentary Assistant, Deputy Minister, Associate Deputy Ministers (two), Service Chiefs of Staff and Chairman of Defence Research Board. *Object*—advising the Minister with regard to administrative matters affecting the Department as a whole or otherwise of inter-Service concern.

* This Chapter, with the exception of the material on the Industrial Defence Board, was revised under the direction of W. Gordon Mills, Deputy Minister, Department of National Defence, Ottawa.

- (2) **Chiefs of Staff Committee.** *Composition*—Service Chiefs of Staff (three), Chairman of Defence Research Board and, when matters of general interest are under consideration, the Under Secretary of State for External Affairs and the Secretary to the Cabinet attend. *Object*—planning, training and over-all supervision of the three Services; preparation of joint reports appreciating the military situation.
- (3) **Personnel Members Committee.**—*Composition*—Adjutant-General (Army), Chief of Naval Personnel, Air Member for Personnel (R.C.A.F.), and Associate Deputy Minister and a Defence Research Board representative (chairmanship rotates). *Object*—joint administration of personnel, medical and dental services, pay, pensions and allied matters; general aim is to ensure that where feasible, personnel of the Navy, Army and Air Force are governed by the same regulations.
- (4) **Principal Supply Officers' Committee.**—*Composition*—principal supply officers from each Service, a Defence Research Board representative and appropriate Associate Deputy Minister (chairmanship rotates). *Object*—co-ordination and unification of supply and equipment and matters of procurement.
- (5) **Inter-Service Recruiting Committee.**—*Composition*—by Service appointment as required (chairmanship rotates). *Object*—planning campaigns and sustaining recruiting programs for the active and reserve components of the Armed Forces.

The Defence Research Board of Canada.—The Defence Research Board was set up to operate as a specialized fourth Service to co-ordinate scientific research of defence significance (see Subsection 4).

Liaison Abroad

For the purpose of liaison and furtherance of international co-operation on defence, Canada maintains: (1) United States-Canadian Permanent Joint Board on Defence. (2) Canadian Joint Staff (Washington) representing the three Services. (3) Canadian Joint Liaison Officers, London, representing the three Services. (4) Service Attachés in various countries throughout the world.

Section 2.—The Armed Forces and the Defence Research Board

The three Armed Services of Canada—the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force—are closely consolidated under single ministerial direction but still operate as three distinct defence Services. Each is headed by a Chief of Staff who is responsible to the Minister of National Defence. Many aspects of administration and training have been amalgamated or co-ordinated in the interests of efficiency and economy.

Terms of service for recruits in each of the Armed Services have been standardized as much as possible. The entire pay structure for comparable ranks has been made uniform. Plans are progressing for standardization of uniforms and equipment wherever feasible. Requirements for recruits and length of enlistment periods vary somewhat in accordance with the demands peculiar to each Service. Generally, educational and physical requirements are the same.

The strengths of the active (permanent) components of the Armed Forces as at Oct. 31, 1948, were: Navy 7,278; Army 16,650; and Air Force 13,341. Table 1 shows rates of pay for the Armed Forces and includes the increases made effective October, 1947.

1.—Monthly Rates of Pay for the Armed Forces, as at May 31, 1948

¹ Subsistence allowance, in all cases, includes \$20 for rations and the balance for quarters. ² Amounts shown do not include marriage allowance of: Officers, \$30 per month; Other Ranks, \$20 per month. ³ Includes subsistence allowance.

Subsection 1.—The Royal Canadian Navy

Administration.—The administrative and operational headquarters of the Royal Canadian Navy is located at Naval Headquarters, Ottawa, Ont. The Chief of the Naval Staff is responsible for policy and direction in all matters concerning the Royal Canadian Navy. He is advised by the Naval Board, consisting of four senior officers who are heads of the main branches of Naval activity—Staff, Personnel, Supply and Technical, and Air.

The Naval Staff, which deals with the organization and operation of the Royal Canadian Navy, is composed of the heads of the various Staff Directorates—Operations, Plans, Intelligence, Communications, Air, Weapons and Tactics.

The Navy maintains operational bases and training centres at Halifax, N.S., and Esquimalt, B.C. In command of all ships and establishments in these areas are the Flag Officer, Atlantic Coast and the Flag Officer, Pacific Coast.

External representation includes the Naval Member of the Canadian Joint Staff, Washington, D.C., U.S.A., and Senior Canadian Naval Liaison Officer, London, England.

The Fleet.—On Feb. 25, 1947, the Minister of National Defence announced the constitution of the Royal Canadian Navy's peacetime fleet. While naturally reduced from the 378 warships served by more than 90,000 men in the spring of 1945, it represented a fleet far superior to anything previously maintained by Canada in peacetime. Designed as a balanced two-ocean organization, it was, for the first time in Canadian naval history, built around big ships and made allowance for the increasing importance of air power.

The keynote of the following twelve months was that of intensive training, and particularly training afloat. Operational ships put in a notable amount of sea time, from the "local" cruises designed for the instruction of Reserves with only two weeks to spend on the water, to far-flung movements combined with fleet exercises and, on occasion, co-operation with ships of the Royal Navy.

The largest unit of the new Force was a "light fleet" aircraft carrier of 18,000 tons. Two 8,000-ton cruisers, seven large Tribal Class destroyers, and four lighter destroyers made up the balance of the fleet. Six frigates and nine Algerine type minesweepers were also maintained, as well as five auxiliary vessels and four motor launches. As at Nov. 15, 1948, the following were the ships in commission or being retained in reserve:—

Light Fleet Aircraft Carrier—
H.M.C.S. *Magnificent*

Six-Inch Cruisers—
H.M.C.S. *Ontario*
H.M.C.S. *Uganda*

Tribal Class Destroyers—
H.M.C.S. *Iroquois*
H.M.C.S. *Huron*
H.M.C.S. *Haida*
H.M.C.S. *Micmac*
H.M.C.S. *Nootka*
H.M.C.S. *Cayuga*
H.M.C.S. *Athabaskan*

"V" Class Destroyers—
H.M.C.S. *Sioux*
H.M.C.S. *Algonquin*

Crescent Class Destroyers—
H.M.C.S. *Crescent*
H.M.C.S. *Crusader*

Frigates—
H.M.C.S. *St. Stephen*
H.M.C.S. *Antigonish*
H.M.C.S. *Swansea*
H.M.C.S. *La Hulioise*
H.M.C.S. *Beacon Hill*
H.M.C.S. *New Waterford*

Algerine Type Minesweepers—

H.M.C.S. *New Liskeard*
H.M.C.S. *Portage*
H.M.C.S. *Wallaceburg*
H.M.C.S. *Fort Francis*
H.M.C.S. *Kapuskasing*
H.M.C.S. *Rockcliffe*
H.M.C.S. *Oshawa*
H.M.C.S. *Sault Ste. Marie*
H.M.C.S. *Winnipeg*

Auxiliary Vessels—

H.M.C.S. *Lloyd George*
H.M.C.S. *Ehkoli*
H.M.C.S. *Llewellyn*
H.M.C.S. *Revelstoke*
H.M.C.S. *Cedarwood*

Motor Launches—

H.M.C. *M.L. 116*
H.M.C. *M.L. 121*
H.M.C. *M.L. 106*
H.M.C. *M.L. 124*

The aircraft carrier H.M.C.S. *Magnificent* is of the Colossus type, with a flight deck 700 feet long and a speed of 25 knots. Though Belfast-built she has a number of Canadian innovations, including a system of cafeteria messing for feeding her crew of more than 1,000. Sea Fury single-seater fighters and Firefly IV fighter-reconnaissance two-seaters constitute her aircraft. The first mentioned are among the fastest carrier-borne fighters in the world. Royal Canadian Navy airmen are trained to "wings" standard by the Royal Canadian Air Force but deck landing and other advanced instruction are provided by the Navy.

H.M.C.S. *Shearwater*, recently commissioned at Dartmouth, N.S., is the shore base for the 18th and 19th Carrier Air Groups, the Training Air Groups, Fleet Requirement Unit and schools for Air Branch personnel. Formerly administered by the Royal Canadian Air Force, *Shearwater* was turned over to the R.C.N. just prior to commissioning.

The 8,000-ton cruisers, 500 feet long, mount nine six-inch guns and heavy anti-aircraft armament. They carry crews of nearly 800 each and have a speed of more than 30 knots. H.M.C.S. *Ontario*, just completed at the end of the War, is currently in commission after a lengthy refit that made her one of the best equipped ships of her type.

The Tribals, fleet destroyers, are of about 2,000 tons and are the most heavily armed vessels of their type. Three of them, British-built, saw much action in the closing years of the War. These are, in order of completion, H.M.C.S. *Iroquois*, H.M.C.S. *Huron* and H.M.C.S. *Haida*. The remaining four are products of Canadian shipbuilders and are the first turbine warships ever built in the Dominion. Two of them, H.M.C.S. *Cayuga* and H.M.C.S. *Athabaskan* were completed in 1947.

H.M.C.S. *Crescent* and H.M.C.S. *Crusader* are smaller destroyers than the Tribals, displacing 1,700 tons, and are thoroughly modern. They are on loan from the Royal Navy.

H.M.C.S. *Algonquin* and H.M.C.S. *Sioux* are Canadian "V" class fleet destroyers. They displace 1,700 tons and, while comparatively new ships, both have battle records to their credit.

The frigates and Algerine minesweepers, war-developed as anti-submarine vessels, displace 1,445 and 1,000 tons, respectively.

The allocation of major units maintained in commission calls for an aircraft carrier and three destroyers on the Atlantic Coast, based in Halifax, N.S., and a cruiser and three destroyers operating from the Pacific base at Esquimalt, B.C. Frigates and Algerines are commissioned with an eye on training requirements, the greater number being called for in the summer months when the flow of Reservists, coming from inland Divisions for their annual sea time, reaches its peak.

While specialized training for both officers and men prior to the War was almost entirely dependent on Royal Navy facilities, the development and modernization of the Halifax and Esquimalt bases, plus the facilities made available by the increased Canadian fleet, have brought the Royal Canadian Navy to a position where, with the exception of a few very highly specialized qualifications, it handles all its own instructional activity.

The actual strength of the R.C.N. permanent Force as at Oct. 31, 1948, was 7,278. Recruits, on enlistment, sign a five-year agreement, with succeeding periods of the same length where a man wishes to continue until he is pensionable.

Officers of the Royal Canadian Navy come from three main sources: (1) graduates from Royal Roads, the Pacific Coast Canadian Services College at Esquimalt, B.C.—the other Canadian Services College, Royal Military College at Kingston, Ont., will graduate its first naval cadets in 1950—see also p. 1139; (2) direct entry of certain specialists from the universities; (3) promotions from the ranks. In addition a number of short-term commissions are held by Naval Air Crew.

Royal Canadian Navy (Reserve).—All Canadian naval reserves are incorporated in a single body, the Royal Canadian Navy (Reserve). Twenty Divisions of this organization are established in the following centres:—

"H.M.C.S. Scotian", Halifax, N.S.	"H.M.C.S. Griffon", Port Arthur, Ont.
"H.M.C.S. Queen Charlotte", Charlottetown, P.E.I.	"H.M.C.S. Chippawa", Winnipeg, Man.
"H.M.C.S. Carleton", Ottawa, Ont.	"H.M.C.S. Queen", Regina, Sask.
"H.M.C.S. Catarqui", Kingston, Ont.	"H.M.C.S. Unicorn", Saskatoon, Sask.
"H.M.C.S. Brunswick", Saint John, N.B.	"H.M.C.S. Tecumseh", Calgary, Alta.
"H.M.C.S. Montcalm", Quebec, Que.	"H.M.C.S. Nonsuch", Edmonton, Alta.
"H.M.C.S. Donnacona", Montreal, Que.	"H.M.C.S. Discovery", Vancouver, B.C.
"H.M.C.S. York", Toronto, Ont.	"H.M.C.S. Malahat", Victoria, B.C.
"H.M.C.S. Star", Hamilton, Ont.	"H.M.C.S. Chatham", Prince Rupert, B.C.
"H.M.C.S. Hunter", Windsor, Ont.	"H.M.C.S. Prevost", London, Ont.

These Naval Divisions are not only the local training centres for Reservists, but are recruiting offices for the Royal Canadian Navy. Drawing heavily on surplus war equipment for basic-training gear, and making use in many instances of new buildings, the Divisions are well fitted to meet modern high instructional requirements. They are commanded by R.C.N. (R) Active Officers, under whom are R.C.N. staff officers and instructors, the latter being instructional specialists.

Approximately 2,500 officers and men of the R.C.N. (R) including members of the University Naval Training Divisions, took part in more than 30 training cruises during the summer of 1948. Ships of the R.C.N. logged more than 35,000 miles and visited ports from Hudson Bay to the Caribbean Sea and from Hawaii to Alaska.

Apart from annual training, officers and men of the R.C.N. (R) may perform voluntary service and special naval duty as required by Naval Headquarters. In the latter case they take the place of permanent Service officers or men where vacancies exist in complement.

There are two types of enlistment in the R.C.N. (R). Officers may be either Active or Retired. The first mentioned do periodic training. Retired officers may volunteer for training if they wish but it is not compulsory. Both classes are liable to mobilization in a time of emergency.

Men are placed on Active or Emergency Lists and are governed by the same conditions as apply to officers. They sign on for five-year periods. Enlistments as at Oct. 31, 1948, totalled 3,847, of whom 955 were men of the University Naval Training Divisions. There is no limitation of complement for retired officers and emergency men.

University Naval Training Divisions.—Divisions for naval training are established at 29 universities and colleges across Canada: Acadia University, Dalhousie University, Nova Scotia Technical College, St. Francis Xavier University, University of King's College, University of St. Mary's College, Mount Allison University, University of New Brunswick, Collège Saint-Alexandre de la Gatineau,

Ecole Polytechnique, Laval University, McGill University, Sir George Williams College, University of Montreal, Assumption College, Carleton College, McMaster University, Ontario Agricultural College, Ottawa University, Queen's University, St. Patrick's College, University of Toronto, University of Western Ontario, University of Manitoba, University of Saskatchewan, Mount Royal College, University of Alberta, University of British Columbia, Victoria College.

The University Naval Training Divisions' program offers undergraduates of all faculties four years of instruction leading to a commission in the Royal Canadian Navy and Royal Canadian Navy (Reserve). It is designed to produce officers in all branches and, to this end, offers training both ashore and afloat.

Training is taken at Naval Divisions and at universities during the academic year. Summer vacation training is taken both in the schools at the coasts and in H.M.C. ships.

Approximately 1,000 undergraduates took training in the 1947-48 academic year. In 1946-47, 16 commissions were obtained and 30 University Naval Training Divisions' men were commissioned upon graduation during 1948.

The Royal Canadian Sea Cadets.—The R.C.S.C. consists of 89 authorized corps, sponsored by the Navy League of Canada and trained and supervised by the Naval Service. The authorized strength is 10,000 cadets between the ages of 14 and 18 years. During a period of two summer months, at seven different camps maintained for their training, 4,000 cadets averaged 14 days each.

Subsection 2.—The Canadian Army

Command.—The system of command of the present peacetime Canadian Army includes:—

Army Headquarters—Ottawa, Ont. (subdivided)
 The General Staff Branch
 The Adjutant-General Branch
 The Quartermaster-General Branch*

Western Command—Headquarters, Edmonton, Alta.
 British Columbia Area—Headquarters, Vancouver.

Prairie Command—Headquarters, Winnipeg, Man.
 Saskatchewan Area—Headquarters, Regina.

Central Command—Headquarters, Oakville, Ont.
 Western Ontario Area—Headquarters, London.
 Eastern Ontario Area—Headquarters, Kingston.

Quebec Command—Headquarters, Montreal.
 Eastern Quebec Area—Headquarters, Quebec City.

Eastern Command—Headquarters, Halifax, N.S.
 New Brunswick Area—Headquarters, Fredericton.

Northwest Highway Command—Headquarters, Whitehorse, Yukon.

Canadian Army Liaison Staff—Washington, D.C.

Canadian Army Liaison Staff—London, England.

Army Headquarters conducts the planning and policy for the administration and training of the Active and Reserve Forces of the Canadian Army. It administers corps schools and other training establishments. Matters affecting Public Relations, Cadet Services, Military Intelligence, Chaplain Services, Provost and associated activities are directed by Army Headquarters through Commands.

* Includes the Branch of the Master-General of Ordnance.

The authority formerly invested in Military District Command has been given considerably wider scope in the new Command organization. The five principal Commands are charged with complete military responsibility, under Army Headquarters, for all matters affecting their territorial areas and the command and administration of all troops within these areas.

Organization.—There is but one Canadian Army which includes all the Ground Forces of Canada. Service is on a voluntary basis. The organization of the Army provides for six component parts as follows:—

The Active Force.—The Active Force is available for General Service and comprises a Field Force, Coast and Anti-Aircraft Defence Units, Headquarters, Command and Area Staffs; also training, intercommunication, administration, research and development staffs, units and establishments, officers and men permanently employed but not borne on any regimental establishment.

The conditions for enlistment in the Active Force provide for men who were on Active Service in the Army during the Second World War, if they meet the physical requirements, have a Grade VIII education or the equivalent and are between 18 and 40 years of age. Young men are preferred. Men who were not on Active Service during the War may enlist if they meet the physical requirements, have a Grade X education or the equivalent and are between 18 and 25 years of age. Men qualified in a particular trade may be accepted up to the age of 35 years.

Officers of the Canadian Army come from three main sources: (1) graduates of the Canadian Services Colleges—Royal Roads at Esquimalt, B.C., and the Royal Military College at Kingston, Ont.; (2) the Canadian Officers Training Corps; (3) promotions from the ranks.

The Reserve Force.—The Reserve Force provides the basis for the organization of a field force in the event of emergency. It is employed on a part-time basis and subject to annual military training.

The Supplementary Reserve.—The Supplementary Reserve maintains lists of units and a list of individuals required in the event of mobilization to complete the organization of the Army. Such personnel will not be subject to, yet not precluded from, annual military training.

The Canadian Officers Training Corps.—The C.O.T.C. is the fourth element of the Canadian Army and responsible for training officer candidates during peace and war; personnel are subject to the same obligations in respect of military service as apply to other sections of the Army.

The Cadet Services of Canada.—Cadet Services are administered by commissioned officers of the Canadian Army, serving on a basis comparable to that of officers of the Reserve Force. These officers also handle training and are under direction of Active Force general staff officers at Command Headquarters. The peacetime reorganization of the Royal Canadian Army Cadet Corps has been completed. New regulations authorize a total of 50,000 Army Cadets across Canada. There are approximately 490 separate cadet corps functioning throughout the Dominion. All service is voluntary. Free uniforms are provided and the opportunity is extended annually to attend a summer camp in one of the five military Commands.

The Reserve Militia.—The Reserve Militia provides for units for home security duties which could not logically be performed by the Reserve Forces. Most prominent of Militia units is the corps of Canadian Rangers, organized in June, 1947.

The role of Canadian Rangers includes the provision of guides to organized troops, coast watching, rescue work in remote localities, assistance to civilian law enforcement agencies and immediate local defence in times of emergency. Authorized strength of the organization is 5,000. Terms of service are somewhat similar to the Reserve Force, though there are no uniforms provided in times of peace nor any training parades. Service duties as Rangers generally parallel the civilian pursuits of members.

Additional to but not integral parts of the Canadian Army are: (1) officially authorized rifle associations and clubs; (2) such training centres as may be authorized from time to time by the Minister.

Training.—Actual training of Active and Reserve Force personnel is under General Officers Commanding the five Commands as directed by the appropriate branch of Army Headquarters.

Basic and advanced training for recruits, as well as refresher courses for all ranks, is conducted in a number of Army Corps Schools. These schools are organized on a permanent peacetime basis and are located as follows:—

Royal Canadian Armoured Corps School, Camp Borden, Ont.
Royal Canadian School of Artillery, Camp Shilo, Man.
Royal Canadian School of Artillery (Anti-Aircraft), Picton, Ont.
Royal Canadian School of Artillery (Coast and Anti-Aircraft), Esquimalt, B.C.
Royal Canadian School of Military Engineering, Chilliwack, B.C.
Royal Canadian School of Signals, Barriefield, Ont.
Royal Canadian School of Infantry, Camp Borden, Ont.
Royal Canadian Army Service Corps School, Camp Borden, Ont.
Royal Canadian Army Medical Corps School, Camp Borden, Ont.
Royal Canadian Ordnance Corps School, Montreal, Que.
Royal Canadian Electrical and Mechanical Engineers School, Barriefield, Ont.
Canadian Provost Corps School, Camp Borden, Ont.

Through international agreements, arrangements have been made for a large number of Canadian Service personnel to attend military schools and training establishments in the United Kingdom and the United States. A similar arrangement is in force for the training of military personnel from these countries in Canadian Service schools.

C.O.T.C. Cadets and certain Reserve Force personnel are also given training at corps schools during the summer months. The bulk of Reserve Forces receive their annual training—generally a two-week period—at large camps across Canada. Active Force instructors and personnel handle training of reserves and their administration during camp periods.

Army High School Cadet Corps are given the opportunity of summer training each year on a voluntary basis. Camps for High School Cadets are conducted in each military command.

Subsection 3.—The Royal Canadian Air Force

The Royal Canadian Air Force is organized to provide for six components: Regular, Auxiliary, Reserve, Air Cadets, Women's Division and University Air Squadrons. At present, the two last components are dormant. The Royal Canadian Air Cadets, while not members of the Force, are affiliated with it for training and instruction, and the Air Cadet officers hold commissions in the R.C.A.F.

The Royal Canadian Air Force is administered from Air Force Headquarters at Ottawa, Ont. There are two geographical Air Commands. Central Air Command, with Headquarters at Trenton, Ont., embraces also No. 10 Group Headquarters, Halifax, N.S. North West Air Command (Headquarters at Edmonton, Alta.) includes two groups, one at Winnipeg, Man., and the other at Vancouver, B.C. In addition to the Air Commands, Maintenance Command (Ottawa, Ont.) directs and co-ordinates supply, equipment, aeronautical and construction engineering and aeronautical inspection services throughout the Air Force; and Air Transport Command (Rockcliffe, Ont.) co-ordinates and directs military air transport and photographic air-survey operations. The last two are functional Commands.

Air Attachés are maintained at Washington, D.C. (U.S.A.), Prague (Czechoslovakia), Paris (France), Brussels (Belgium), Stockholm (Sweden), and Moscow (Russia). In addition, the R.C.A.F. is represented by Senior Canadian Air Force Liaison Officers at London (England) and Washington, D.C. (U.S.A.).

Organization.—Plans for operational units of the Regular Force include a Mobile Tactical Wing, an Interceptor Wing, a Bomber Reconnaissance Squadron, two Transport Squadrons, and two Photographic Survey Squadrons. Fifteen squadrons are projected for the Auxiliary Force which will have an authorized establishment of 4,500 officers and men. The auxiliary units now in existence or to be formed in 1948 are as follows:—

No. 400 (Fighter) Squadron.....	Toronto, Ont.
No. 401 (Fighter) Squadron.....	Montreal, Que.
No. 402 (Fighter) Squadron.....	Winnipeg, Man.
No. 403 (Fighter) Squadron.....	Calgary, Alta.
No. 406 (Tactical Bomber) Squadron.....	Saskatoon, Sask.
No. 418 (Tactical Bomber) Squadron.....	Edmonton, Alta.
No. 420 (Fighter) Squadron.....	London, Ont.
No. 424 (Fighter) Squadron.....	Hamilton, Ont.
No. 438 (Fighter) Squadron.....	Montreal, Que.
No. 442 (Fighter) Squadron.....	Vancouver, B.C.

The R.C.A.F. (Reserve) is intended to provide a pool of partially trained personnel who can be mobilized, if the necessity should arise, and trained quickly to operational standards. Its members will be drawn initially from former personnel of the Force who served during the Second World War.

The Royal Canadian Air Cadets, a corps of 15,000 boys between the ages of 14 and 18, come under the aegis of a volunteer civilian organization—the Air Cadet League of Canada. The R.C.A.F. co-operates with the League in bringing aviation and citizenship training to the air cadets who, in addition to receiving a standard course of instruction, may also qualify for trips to summer camps, flying training courses, educational scholarships and exchange visits with cadets of other countries. While the air cadets make no commitments regarding entry into the R.C.A.F., their pre-training is considered valuable as a basis for a Service career. Graduate air cadets constitute a high percentage of the enlistments in the Regular Force.

Operations.—From Apr. 1, 1947, to Mar. 31, 1948, Air Transport Command flew 16,897 hours on transport operations, a total of over 2,000,000 air transport miles. More than 23,000 passengers and over 4,000,000 lb. of freight were carried. Approximately 5,500 hours were flown on photographic operations and special projects such as ferrying of aircraft, mercy flights, carrying passengers, and co-operation on combined Services exercises.

The R.C.A.F. photographed 280 square miles in 1921, the first year that photographic air survey was attempted by the Air Force. Since that date, one-half of Canada has been photographed by the R.C.A.F. In 1947 the R.C.A.F. covered more than 400,000 square miles, and in 1948 covered 911,000 square miles. Since the War, better cameras, navigational aids and aircraft have greatly increased efficiency. The two Photographic Squadrons—a part of Air Transport Command with Headquarters at Rockcliffe, Ont.—which carry out this work, send out detachments each year between Apr. 15 and Oct. 1. They operate from many bases, including: Calgary and Edmonton, Alta.; Vancouver and Fort Nelson, B.C.; Fort Chimo, Que.; Goose Bay, Labrador; Churchill and The Pas, Man.; Whitehorse, Yukon; Frobisher (Baffin Island), Yellowknife, and Norman Wells, N.W.T. In co-operation with the Canadian Army, the Department of Mines and Resources, and other Government departments, the R.C.A.F. helps to map uncharted areas and to correct existing maps. It also assists in such work as timber and geological surveys, flood control, land development, town planning, water-power development, irrigation projects, and soil reclamation. One squadron, equipped with Canadian-built Lancasters, specializes in tri-camera photography for basic exploration; the other is used primarily for vertical photography in detailed analysis of terrain.

Approximately 40 search and rescue operations were carried out in 1947. The R.C.A.F.'s Search and Rescue Organization is co-ordinated with contributing arms of the Army and Navy. Search and Rescue Control Centres are located at No. 10 Group Headquarters (Halifax, N.S.), Central Air Command Headquarters (Trenton, Ont.), No. 11 Group Headquarters (Winnipeg, Man.), North West Air Command Headquarters (Edmonton, Alta.), and No. 12 Group Headquarters (Vancouver, B.C.). These Headquarters are responsible for initiating, conducting and terminating search and rescue operations within their respective areas of control.

Search and rescue aircraft, marine craft, and special para-rescue personnel are located at the following places: Greenwood, N.S.; Trenton, Ont.; Winnipeg, Man.; Edmonton, Alta.; Fort Nelson, B.C.; Vancouver, B.C.; Whitehorse, Yukon; and Goose Bay, Labrador.

Enlistment.—The R.C.A.F. offers enlistment of skilled or unskilled men. Veterans who were on Active Service may enlist if they meet the physical requirements, and are under the age of 30 years plus their number of years of Active Service. Applicants who were not on Active Service may be accepted if they meet the physical requirements, are unmarried, and are between 17 and 30 years of age. Applicants under 18 must have written consent of parent or guardian. The majority of trades open for recruiting call for an educational standard of two years less than junior matriculation or equivalent.

Commissions.—Graduation from either of the Canadian Services Colleges (Royal Military College, Kingston, Ont., or Royal Roads, Esquimalt, B.C.) qualifies young men for acceptance in the R.C.A.F. as officer trainees. Technical officer positions are granted to selected university graduates. Six-year short-service commissions are available to qualified high-school graduates and selected serving airmen.

Training.—The R.C.A.F. Staff College at Armour Heights, Toronto, Ont., trains officers for command and staff positions (see also p. 1139). At the Institute of Aviation Medicine, Toronto, Ont., there are facilities for consultant and specialist officers, laboratories for nutritional research, a human centrifuge, a cold low-pressure chamber, a tropical room, a statistical section, and well-equipped laboratories for the study of all branches of aviation medicine.

Ground training came into full operation during 1947. Schools at Trenton, Aylmer, Camp Borden, Rockcliffe, Clinton, and Centralia in Ontario, worked to capacity instructing recruits in the skills of the various Air Force trades, and at the same time gave additional courses to many veteran airmen who had re-engaged in the peacetime Force. Ground schools were run for officers also, and large classes were graduated by No. 1 KTS (no longer operative), a school of administration for junior officers most of whom had no chance during their wartime flying days to learn the administrative jobs required of the peacetime officer.

Initiated in 1947 was the R.C.A.F.'s Summer Employment Plan, under which veteran officers attending university were brought back into uniform, to work and train with the Air Force during the summer months. Eighty-four such students from leading Canadian universities returned on a Reserve basis, and were engaged in medical and technical research and survey work. The plan is designed to train the students in the various specialist branches of the Service during their university careers, and the type of work done by each fits in as closely as possible with the course taken by the student. Qualified students may be offered commissions in the R.C.A.F. upon completion of their professional training.

There was increased activity on flying training stations in 1947 as new entries began aircrew training. The first class of young flight cadets started their careers as aircrew officers during the autumn, having qualified for short-service commissions in the R.C.A.F. The first group, small by comparison with wartime courses but to be followed by further intakes at regular intervals, passed through No. 1 Manning Depot, Toronto, to the Flying Training School, Centralia, Ont., or to the Radar and Communications School, Clinton, Ont., depending upon whether the cadets were taking pilot or radio-navigator training. Flying began for them before the end of the year, and upon completion of their training they will become flying officers.

Flying training was also given to university undergraduates, who entered under the new University Summer Flying Training Scheme, which began during 1947. Thirty-six such undergraduates from ten universities across the country took pilot or radio-navigator training. Such students, after spending three summer training periods with the Air Force, and successfully finishing their university course, will be offered commissions in the Regular, Auxiliary or Reserve Air Forces.

Air Force Day.—Instituted in 1947, the R.C.A.F.'s annual "Open House" falls on the first or second Saturday in June. The purpose is to give the Canadian public an opportunity to see the equipment and personnel of the Air Force, with the hope of establishing a better understanding of Service activities and operations.

Subsection 4.—The Defence Research Board

The Department of National Defence Act was amended on Apr. 1, 1947, to provide for the establishment of a Defence Research Board. The Board consists of five ex officio and six appointed members serving under a full-time chairman. The ex officio members are the Chiefs of Staff of the three Armed Services, the President of the National Research Council and the Deputy Minister of National

Defence. The remaining six members are appointed by the Governor General in Council and are members with scientific and technical qualifications drawn from the universities and industry. The organization consists of a headquarters staff, advisory committees and field research stations.

The Defence Research Board is an essential part of the defence of Canada and as such has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. This task is the main function of the Headquarters Staff. Its work is strengthened by the expert counsel of comprehensive advisory committees.

In order to avoid unnecessary duplication of research facilities, the research stations of the Board deal only with those problems that are peculiar to national defence. In other fields, such as electronics and aeronautics which touch upon related civilian researches, it collaborates with existing research laboratories, especially those of the National Research Council.

In all its work, the Board gives priority to problems in which Canada has special interest or for which national facilities are specially suited. Experience has already shown that well-directed defence research produces results that are of value, both direct and indirect, to the civilian economy.

It was, for example, revealed in 1947 that, as a result of wartime research into defensive measures against possible bacteriological warfare, Canadian scientists in collaboration with United States colleagues produced a vaccine to immunize cattle against the highly destructive rinderpest disease. The results of this research have been given freely to the world.

In planning this organization, the Government had in mind the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council.

Section 3.—Service Training

Co-ordination of service training in all its stages is carried out in Services Colleges and Staff Colleges. Services Colleges are cadet institutions qualifying graduates for commissions in the Permanent Forces and accept applicants for any of the Services. National Defence and Staff Colleges are more specialized but operate jointly to a great degree.

Canadian Services Colleges.—Canadian Services Colleges at present comprise two institutions designed to train future officers required for the Armed Forces of Canada. Candidates for admission to either college must be Canadian citizens, or other British subjects normally resident in Canada. They must be 16 years of age but under 20 by Jan. 1 preceding entrance. Naval candidates are not accepted over the age of 19. A high standard of physical fitness is required. Applicants must have senior matriculation in most subjects and pass a qualifying examination before acceptance. Annual tuition fees at either college are \$100. Payment for board, uniforms, books, laundry, etc., is \$450 for the first year and \$200 for each year thereafter. During the summer terms, officer cadets are paid as junior

officers and are provided with quarters and board while training at the various Active Force establishments of the Service selected. Inquiries should be addressed to the Registrar of either College.

(1) *Royal Roads*, Esquimalt, B.C., offers a two-year course leading up to commissions in any of the Services. Formerly a Naval college, Royal Roads continues under Naval administration but has instructors from the three Services as well as a professional academic faculty. Graduates may return to civilian life and pursue their studies at university in order to obtain a degree, but they must accept a commission in the Reserve component of the chosen Service. Excepting certain Naval appointments, graduates of Royal Roads seeking commissions in the Active (Permanent) Forces of one of the Services must continue studies either at the Royal Military College or a Canadian university, depending upon the corps or branch of Service chosen.

(2) *Royal Military College*, Kingston, Ont., offers a four-year course leading up to commissions in any of the Services. Formerly a military college, R.M.C. continues under Army administration but has instructors from the three Services as well as a professional academic faculty. R.M.C. opened for its first course in the autumn of 1948. Graduates returning to civilian life and pursuing their studies at universities may obtain engineering degrees in one year or be accepted for other professions on the same basis as university graduates in the faculty of arts. R.M.C. graduates not continuing a Service career must accept commissions in a Reserve component.

Advanced Training Colleges.—The Canadian Army and the Royal Canadian Air Force operate the undermentioned staff colleges for giving Staff and Command training while the National Defence College provides facilities for advanced study of defence problems.

The National Defence College, Kingston, Ont., is a senior Canadian Defence College with a primary objective of co-ordinating defence measures with external and economic policies. It was first opened on Jan. 5, 1948, with senior officers and civil servants from the Armed Forces and Government departments attending. The course is of nine months' duration and includes the study of new and foreseeable developments in science, economics and international politics, and their effects upon national security. The curriculum includes lectures by prominent men from all fields of endeavour.

The Canadian Army Staff College, Kingston, Ont., is a military staff college operating on a permanent basis to train officers for positions of staff and command. The course covers a period of ten months. A joint instructional staff includes faculty members from the three Services as well as from the United States and British armies. The student body contains members from the three Services and five different nations. Aside from purely military subjects, the curriculum provides for intensive study of current world affairs and lectures by prominent guest speakers in this field. Graduates are qualified for Grades I and II Staff appointments or commands in the Service.

The Royal Canadian Air Force Staff College, Toronto, Ont., is a permanent Air Force Staff College whose training program is designed to give officers of Squadron Leader to Group Captain rank the necessary background and knowledge to fit them for Staff and Command positions. The Directing Staff includes officers from the Royal Canadian Air Force, the Canadian Army and the Royal Air Force, while

the student body consists of officers from the Royal Canadian Navy, the Canadian Army, the Royal Air Force, the United States Air Force, as well as the Royal Canadian Air Force. Besides the normal organizational and administrative subjects, the curriculum includes an advanced study of the three aspects of air power; air strategy and its relation to ground and sea forces; current world affairs and their effect on the Canadian strategic position; and the industrial potential of the country. Subjects are presented and discussed under the guidance of the Directing Staff or guest speakers, many of whom are prominent in Canadian and United States diplomatic, university and industrial life.

Section 4.—The Industrial Defence Board*

The Industrial Defence Board was created in 1948 by virtue of an Order in Council P.C. 1739. The duties and functions of the Board are: (1) to advise the Government of Canada and the Minister of National Defence on all matters relating to the industrial war potential of Canada; (2) to prepare and keep up to date a plan for industrial production in the event of war; (3) to arrange for such liaison between the Naval, Military and Air Forces of Canada, the Canadian Ordnance Association, Canadian Arsenals Limited and other agencies and industries as will ensure an understanding of defence needs and the active co-operation required to meet such needs; (4) to encourage the standardization of specifications and industrial practices; (5) to advise on the location of industries and on the development, procurement, inspection, storage and distribution of material and equipment and the maintenance of reserve stocks; (6) to take such action in respect of other matters as may be requested by the Governor in Council or the Minister of National Defence.

Matters of immediate concern to the Board include: (1) examination of the various agencies concerned in planning and initiating procurement and production of war equipment in Canada so as to recommend a division of responsibilities which will ensure that these responsibilities are effectively met without overlapping; (2) consideration of requirements in the light of plans and possible programs of the Armed Forces and the assessment of the capacity to make available the materials, manpower and manufacturing facilities that may be required, with special recommendations regarding materials, industry or plants which are regarded as essential and for which some special provision should be made.

In addition to seven members representing industry, from among whom the Chairman and Vice-Chairman of the Board have been appointed by the Governor in Council, the Board is composed of: the Chairman of the Defence Research Board, the President of Canadian Arsenals, the three Principal Supply Officers of the Armed Forces, the Deputy Minister of National Defence, the Deputy Minister of Trade and Commerce and the Deputy Minister of Labour. The appointed members of the Board hold office for a period not exceeding three years but they are eligible for reappointment. The Board may, with the approval of the Minister: (1) appoint committees for the purpose of assisting the Board in the performance of its duties and functions; (2) set up an executive committee to deal with business of the Board between meetings; (3) make by-laws and rules for the regulation of its proceedings and for the performance of its duties and functions.

* Prepared from a release of the Department of National Defence.

CHAPTER XXIX.—VETERANS AFFAIRS*

CONSPECTUS

	PAGE		PAGE

Subsection 2. War Veterans Allowances.....	1150		

The basis of administration of the Department of Veterans Affairs, established in October, 1944, is dealt with in the 1946 edition of the Year Book at pp. 1053-1054. The work of the Department as it had developed up to Mar. 31, 1947, is outlined at pp. 1134-1155 of the 1947 edition and is brought up to Mar. 31, 1948, in the present volume.

Section 1.—The Department of Veterans Affairs

There was a somewhat changed emphasis in the work of the Department of Veterans Affairs in the year ended Mar. 31, 1948. The fact that the majority of veterans had adjusted themselves to civilian life, and that the right to apply for certain strictly rehabilitation benefits came to an end, resulted in some decrease in the phase of the Department's operations which came under the Veterans' Rehabilitation Act. However, the continuing phases of the Department's work showed a definite up-swing. For instance the number of disability pensioners from the Second World War increased substantially as did the number of older veterans with no pension entitlement, but who were eligible for consideration under the War Veterans' Allowance Act because of their service in a theatre of war. There was a decrease in the number being treated in departmental institutions, but the load in this category still remained a fairly heavy one.

It is estimated that, assisted by the rehabilitation legislation, more than 95 p.c. of veterans have found peacetime occupations, or are completing training for their chosen careers. While this ratio does not apply to veterans with serious disabilities, nevertheless employers have become conscious of the fact that physical disability need not be an occupational handicap and the majority of even the most seriously disabled, who are ready to work, have found their place in civilian employment.

Medical treatment and care for veterans, which occupies the time of almost one-half of the departmental staff, is provided by approximately 33 institutions administered by the Department of Veterans Affairs. Other similar institutions are under contract with the Department and the services of many general practitioners have been made available to all these institutions. The remainder of the

* Material for this Chapter has been contributed by the various Branches of the Department of Veterans Affairs through E. B. Reid, Director of Public Relations of Veterans Affairs.

departmental staff deals with the other branches: the Veterans' Land Act Administration; the Rehabilitation Branch; the Canadian Pension Commission; the War Veterans' Allowance Board; General Administration; etc.

The Department has 17 District Offices and two Sub-District Offices in Canada, and maintains a District Office at London, England. The Administration of the Veterans' Land Act also maintains District and Regional Offices in readily accessible locations. Travelling rehabilitation units operating in certain of the more isolated parts of the country have greatly assisted the rehabilitation of many veterans who otherwise would have been unable to take advantage of their rights and privileges or, if they did, would have incurred excessive expense to both themselves and the Department.

Section 2.—Discharge Gratuities and Re-Establishment Credits

Gratuities granted under the War Service Grants Act were nearly all paid by the end of the fiscal year 1946-47. In the year ended Mar. 31, 1948, the amount paid covered veterans who became qualified under the Allied Veterans Benefits Act for the payment of gratuities at Canadian rates, and also amounts paid in the settlement of estates in the case of those who were killed in action or who died during service.

1.—Gratuity Payments Under the War Service Grants Act, Years Ended Mar. 31, 1945-48

from 1946 to 1948.

² This credit is the result of a bookkeeping adjustment

Re-Establishment Credits.—During the fiscal year 1947-48 the amount of re-establishment credit authorized for use by veterans was slightly over \$67,100,000, some \$29,000,000 less than the amount authorized in 1946-47 when disbursements reached a peak of more than \$96,500,000.

The percentage of re-establishment credit used for the various purposes remained relatively static. The purchase of furniture continued to be the main purpose, although it dropped from 74 p.c. of the total credits used up to Mar. 31, 1947, to 57 p.c. at Mar. 31, 1948. It is interesting to note that, by Mar. 31, 1948, of the approximately \$192,000,000 re-establishment credit authorized for veterans, about

\$150,000,000 was spent on tangible assets connected with a home, either in the actual purchase or repair of a home or the reduction of mortgages and the purchase of furniture and equipment. Some 6,550 veterans used their re-establishment credit for the payment of insurance premiums under the Veterans Insurance Act, policies having been issued with a face value of \$18,779,000.

¹ Subject to revision.

Section 3.—Post-Discharge Treatment

Subsection 1.—General Policy

The general policy with regard to post-discharge treatment is based on two fundamental principles designed to provide the best possible professional medical and surgical care for veteran patients. The first principle is close co-operation with the universities, so that veterans' hospitals may be used for undergraduate or post-graduate teaching. As at Mar. 31, 1948, a total of 193 internes were employed in those departmental hospitals, the majority of which have been approved by the Canadian Medical Association for junior internship. Applications have been submitted to the Royal College of Physicians and Surgeons to have the larger hospitals approved for post-graduate training.

The second principle is that consultant staffs at the departmental hospitals should, as far as possible, be employed on either a part-time or a temporary basis, thus permitting the Department to secure the services of highly qualified professional men who, for the most part, are engaged in university teaching. This expedient has proved of benefit both to the veteran and to the departmental resident staff. The veteran patient is assured of the most modern methods of diagnosis and treatment, and the interne benefits by close association with leaders in the profession.

Special centres for the treatment of such conditions as arthritis, paraplegia and tuberculosis have been established in many of the larger departmental hospitals and clinical research is being carried out along with treatment. Where departmental hospital facilities are not available, veterans with service-related disabilities and others in case of necessity may still continue to receive medical services through the doctor of their choice.

As at Mar. 31, 1948, medical social work was being conducted at 15 departmental hospitals to assist in the treatment of the social and emotional problems adversely affecting the health of patients. To achieve this purpose, a direct case-work service is projected for those patients whose doctors desire it, using all appropriate sources of assistance for the patient within the Department and in the community. The service is designed for in-patients but is capable of expansion to out-patients and to the after-care of patients following discharge.

Subsection 2.—Treatment Facilities

The veteran patient load reached its peak in 1946 and has since slowly and steadily declined to a level which will probably remain fairly constant for some years. Eligibility for the post-discharge year of treatment has expired and very few veterans of this class are now under treatment. Similarly, with demobilization of the Armed Forces completed, eligibility for treatment of conditions present on discharge has also ceased. The patient load now consists mainly of pensioners with service-related disabilities and those in reduced circumstances who are eligible for treatment because of meritorious service. It was thus possible, during the calendar year 1947, to close 12 hospitals representing some 3,000 beds. Most of these institutions had been taken over from the Armed Forces.

Seven new and modern institutions containing 945 beds were opened during the year, representing replacement of obsolete facilities rather than increased bed capacity. These were:—

<u>Name and Location</u>	<u>Bed Capacity</u>	<u>Date</u>	<u>Type</u>
Sunnybrook Hospital, Toronto, Ont.....	200	Feb. 28, 1947	General treatment
George Derby Health and Occu- pational Centre, Burnaby, B.C..	200	Mar. 31, 1947	Active convalescent
Veterans Hospital, Victoria, B.C.	220	Mar. 31, 1947	General treatment
Ridgewood Health and Occupa- tional Centre, Saint John, N.B..	100	May 31, 1947	Active convalescent
Bellevue Veterans Home, Amherst- burg, Ont.....	25	July 21, 1947	Domiciliary care
Senneville Health and Occupational Centre, Montreal, Que.....	100	Nov. 3, 1947	Active convalescent
York Health and Occupational Centre, Toronto, Ont.....	100	Nov. 30, 1947	Active convalescent

As at Dec. 31, 1947, the Department had in operation 10,647 beds in 39 institutions. Of these, 13 were general treatment hospitals, six were health and occupational centres for convalescents, six were special institutions, ten were veterans homes and four were veterans pavilions maintained as units of existing general hospitals.

The permanent building program is proceeding according to plan (described in detail at pp. 1057-1058 of the 1946 Year Book). It is expected that about 1,250 beds will be available during 1948 including 250 replacement beds at Camp Hill Hospital, Halifax, 700 additional beds at Sunnybrook Hospital, Toronto, and a 300-bed addition at Westminster Hospital, London. It is anticipated that 500 beds will be dispensed with during 1948.

In the year ended Mar. 31, 1948, hospital admissions totalled 60,579.

Subsection 3.—Dental Services

A brief history of dental services from their organization in 1919 to Mar. 31, 1947, is contained in the 1946 and 1947 editions of the Year Book at pp. 1059-1060 and pp. 1138-1139, respectively. The volume of dental treatment reached its peak during the year ended Mar. 31, 1947, when services supplied increased more than five-fold over the preceding year. Applications for post-discharge treatment up to Mar. 31, 1948, numbered 662,481; of this total more than 650,000 had been completed or otherwise closed out. In addition to post-discharge treatment given in the first year after release from the Armed Forces adequate dental services were maintained for all treatment classifications defined in Order in Council P.C. 4465 and amendments thereto.

<i>Year Ended Mar. 31—</i>	<i>Treatments</i>	<i>Patients Completely Treated</i>

1948.....	1,191,218	160,313

Subsection 4.—Prostheses and Surgical Appliances

The Prosthetic Services Branch of the Department of Veterans Affairs, established in August, 1916, has as its first responsibility the provision of prostheses and orthopædic appliances to veterans and other persons entitled to such supply under Order in Council P.C. 2048 as amended. Appliances are supplied upon request to Provincial Workmen's Compensation Boards, Canadian National Railways, Department of National Defence, Department of Mines and Resources and others.

The organization consists of a main manufacturing and fitting centre at Toronto and 11 district centres established in the major Canadian cities, equipped with facilities for measuring, fitting, adjusting and maintaining artificial limbs, orthopædic boots, splints, braces, artificial eyes and other appliances. Minor orthopædic appliances such as trusses, glasses, hearing aids, elastic hosiery, etc., are supplied through purchase from private manufacturers.

The number of persons supplied with appliances during the year ended Mar. 31, 1948, was 45,238 as compared with 76,774 during the previous fiscal year. Appliances supplied since Apr. 1, 1940, were as follows:—

<i>Year Ended Mar. 31—</i>	<i>Total Production Jobs</i>	<i>Stock and Purchases</i>	<i>Total Issues</i>
	No.	No.	No.
1940.....	15,703	15,920	31,623
1941.....	15,167	15,944	31,111
1942.....	16,625	16,460	33,085
1943.....	19,601	17,024	36,625
1944.....	21,990	17,847	39,837
1945.....	27,472	27,423	54,895
1946.....	36,484	61,327	97,811
1947.....	37,947	84,958	122,905
1948.....	32,626	59,924	92,550

The Department maintains special liaison with the Canadian National Institute for the Blind, which extends training and after-care service to blinded veterans, the National Institute for the Deaf and the Hard of Hearing on matters relating to veterans with loss of hearing, and the War Amputations of Canada on veteran amputation cases.

The Branch conducts its own prosthetic research and development program and also keeps abreast of developments in Great Britain, the United States and other countries.

Section 4.—Pensions and Allowances

Subsection 1.—The Pension System

Pensions Legislation.—The Pension Act of 1919 established a Board consisting of three members vested with exclusive power and authority to adjudicate upon pension claims and to award pensions for disability or death related to military service in the First World War. The Canadian pensions legislation as it developed following the First World War is outlined at pp. 759-760 of the 1943-44 Year Book. The machinery which then took form has been adapted and applied to present circumstances, and the Commission now consists of 14 members.

Following the outbreak of the Second World War, the provisions of the Pension Act, with certain modifications, were tentatively made applicable to members of the Armed Services serving in that War and, in 1941, Parliament appointed a Select Committee to consider the provisions of the Pension Act, including ex-service men's problems generally, and to make suitable recommendations in regard thereto. After consideration of the Committee's report, which was framed to meet prevailing conditions and based on experience gathered in the administration of the Pension Act since the First World War, Parliament decided to make the provisions of that statute, with appropriate amendments, applicable to claims arising out of the Second World War.

The provisions of the Pension Act, as originally enacted in 1919, although wide and generous in their scope as compared with pension legislation in other countries, have been considerably broadened and extended by various amendments enacted from time to time during the past 29 years. Amendments to the statute since 1919 have:—

- (1) substantially increased the actual amounts of pension payable;
- (2) widened the grounds on which pension might be awarded;
- (3) authorized certain additional benefits, such as clothing allowances for pensioners compelled to wear artificial appliances, allowances for parents, and special provisions for disability due to tuberculosis;
- (4) introduced the principle of personal appearance and public hearings for applicants;
- (5) with respect to the War of 1939-45 provided that service anywhere outside of Canada should be regarded as service in a theatre of actual war.

Application Procedure.—The procedure followed in dealing with applications for pension, arising out of the First World War, is laid down in Sect. 52 of the Act. Briefly, it consists of three stages for applicants whose claims are not initially granted. On first application the evidence presented is considered at what is known as a first hearing. If the Commission's decision is adverse to the applicant, he is entitled to a second hearing, provided he applies within 90 days of the first hearing. When presenting his claim for second hearing, he is required to include

all disabilities which he claims to be due to his military service. Prior to second hearing the applicant is furnished with a complete and detailed summary of all evidence available in the departmental records pertaining to his case and is allowed six months in which to prepare his claim. If the decision of the Pension Commission on the second hearing is adverse to the applicant, he then has the right to appear before an Appeal Board of the Commission sitting in his district and to call witnesses if he so desires. The judgment of the Appeal Board is final and the application cannot be considered again, except by special permission of an Appeal Board when it is shown, to the satisfaction of such a board, that an error has been made by reason of evidence not having been presented or otherwise.

This procedure has proved eminently satisfactory for claims arising out of the First World War. Not only is the applicant made fully aware of the reasons which preclude entitlement to a pension, but he is given adequate expert assistance by the Veterans' Bureau or by ex-service men's organizations in the preparation of his claim. It has resulted in making final settlement of claims where the Commission contended that the evidence adduced by the petitioner was insufficient to show that the cause of disability or death was contingent on conditions or events in the Service.

The procedure governing cases arising out of the Second World War was revised in 1944, when all time limits for preparation and submission of applications in such cases were suspended by Order in Council, the main provisions of which were incorporated in the Pension Act in 1946. When a claim is not wholly granted, the applicant may renew his application without the imposition of any time limits and may advise the Commission of his intentions as to the further prosecution of his claim, either by renewed hearing or appeal. The procedure followed is very similar to that for veterans of the First World War, the main difference being the non-existence of time limits and the applicant's right to by-pass the "renewal hearing" and take his case direct to an Appeal Board sitting in his district.

In 1945-46, a thorough revision of all legislation affecting veterans of the Second World War, passed since the commencement of the War, was carried out by a Select Committee of the House of Commons which was appointed to: (1) consider all legislation passed since the commencement of the War with the German Reich relating to the pensions, treatment, and re-establishment of former members of His Majesty's Armed Forces and other persons who have otherwise engaged in pursuits closely related to war; and (2) prepare and bring in one or more Bills to clarify, amend or supplement the above legislation. This Committee completed its deliberations in July, 1946, and comprehensive legislation based on its recommendations was incorporated in amendments to the Pension Act (10 Geo. VI, c. 62) assented to Aug. 31, 1946.

The most important legislative change resulting from the Committee's recommendations was the restoration of the so-called "insurance principle" for members of the Services who, in the Second World War, did not serve in a theatre of actual war. The operation of this principle which applies to the First World War and, in effect, provides pension coverage for disabilities incurred during service, whether due to service or not, was modified in 1940 so as to apply only to cases in which the member of the Services had served outside Canada. Following the restoration of the insurance principle, a review of all cases affected by this change was carried out by the Canadian Pension Commission, action being taken to institute awards where indicated. Other changes provided for the extension of the benefits of the Canadian Pension Act to persons domiciled in Canada at the commencement of

the Second World War, who served in Commonwealth Forces, or in Forces of the Allied Nations, and broadened the scope of the statute in its application to Canadians who served in Services, other than those of Canada, in the First World War.

Peacetime Service.—In respect of claims arising out of service during peacetime, pension may be awarded if the injury or disease or aggravation thereof resulting in disability or death arose out of, or was directly connected with, such service. The procedure governing such claims is that prescribed by Sect. 52 of the Pension Act.

Civilian War Pensions and Allowances.—Under the Civilian War Pensions and Allowances Act, administered by the Commission, provision is made for consideration of claims by: merchant seamen and salt-water fishermen; Auxiliary Services personnel; the Corps of (Civilian) Canadian Fire Fighters for service in the United Kingdom; Royal Canadian Mounted Police; Royal Canadian Mounted Police—special constables; air raid precaution workers; those sustaining injury during remedial treatment; Voluntary Aid Detachment; overseas welfare workers; and Canadian civilian air crew of the Royal Air Force Transport Command.

Detailed particulars are available on application to the Secretary of the Commission at Ottawa or to the Commission's representatives, the pension medical examiners, at the District offices.

3.—Pensions in Force as at Mar. 31, 1941-48

Payment of Pecuniary Grants for Gallantry Awards.—Certain gallantry awards, such as the Victoria Cross, Military Cross, Distinguished Flying Cross, Distinguished Conduct Medal, Conspicuous Gallantry Medal and Distinguished Flying Medal, carry with them pecuniary grants which were formerly paid by the United Kingdom Government. To these were added during the Second World War, the Distinguished Service Medal and the Military Medal which formerly were not accompanied by pecuniary benefits. By Order in Council P.C. 4736, dated June 17, 1943, the Canadian Government, through the Canadian Pension

Commission, assumed the payment out of Canadian funds for all awards arising out of the Second World War and the United Kingdom was reimbursed for such awards already paid. As at Mar. 31, 1948, 2,273 such awards had been authorized.

The Pension Act was further amended by 11-12 Geo. VI, c. 23, assented to on May 14, 1948. The principal changes were as follows:—

- (1) Basic rates of pension for disability and death were increased by approximately 25 p.c. for all ranks up to and including lieutenant. All ranks to captain now receive the same basic rate. Additional pension for wives and children of all ranks was increased;
- (2) increased allowances for helplessness were authorized; the new rates provide a minimum of \$480 per annum with a maximum of \$1,400 per annum, and are payable to all ranks;
- (3) the date line for the marriage or re-marriage of First World War pensioners was advanced from May 1, 1944, to May 1, 1948;
- (4) the disability pension schedule was amended so that all disability pensions are assessed at the nearest multiple of 5; e.g., 48 p.c. disability becomes 50 p.c.; 46 p.c. disability becomes 45 p.c.;
- (5) the expression "was wilfully and deliberately concealed" was deleted from the clause which defines the grounds on which pension entitlement may be granted for pre-enlistment disabilities which were aggravated during service;
- (6) the benefits of the Pension Act were extended to widows of deceased members of Canada's forces who served in the South African War who previously could not be awarded pension from Canadian funds unless an award had been made by United Kingdom authorities.

Veterans' Bureau.—The Veterans' Bureau was established in 1930 to assist the applicant for war disability pension and present his claim to the Canadian Pension Commission. (See 1947 Year Book, p. 1142.) The services of the Bureau are free to the applicant. Bureau Advocates assist not only ex-members of the military forces, but also those given disability pension rights under the Civilian War Pensions and Allowances Act. Claimants have been represented by Bureau Advocates in practically 100 p.c. of appeals.

The policy of the Canadian Pension Commission is to make a ruling as to pensions, without application by claimants, in respect to all members of the military forces who are discharged with a disabling condition. In the large majority of pension claims, therefore, the Veterans' Bureau first appears in a case on a claim by the applicant that the Pension Commission decision is wrong. The move against a Commission decision may take several forms. The applicant may apply for a renewal hearing with additional evidence. He may make several such applications. He may ask for an Appeal Board hearing with or without having had renewal hearings and with or without any additional evidence. With very limited exception, the Appeal Board ruling is a final disposition of the claim. The Appeal Board hearing is held in the applicant's district, and is made before three members of the Pension Commission who have not previously dealt with the claim and the applicant is there given an opportunity to appear personally with his representative who may be an Advocate from the Veterans' Bureau or any other person whom he may nominate. He may call witnesses to support his claim and his Advocate has the right to examine and cross-examine witnesses and present argument to the Board.

In addition to assisting applicants on entitlement claims, Bureau Advocates are charged with the duty of advising and assisting ex-service personnel or other persons entitled to claim for pension on any phase of pension law or procedure which may have a bearing on the pension claim. In all offices across Canada they are called upon daily to advise and assist in matters quite apart from war disability pensions.

Departmental reports covering the period from Sept. 1, 1939, to Mar. 31, 1947, show that 5,042 applications for Appeal Board hearing were filed in connection with First World War claims. Of these, 965 were granted and 3,728 refused. Withdrawal of claims and deferred decisions accounted for the rest. During the same period, 7,047 applications were filed by Second World War applicants and of these, 1,558 were granted and 3,886 refused. The Veterans' Bureau had approximately 9,480 pension claims under preparation, in varying stages of activity, as at Mar. 31, 1948.

Subsection 2.—War Veterans Allowances

The War Veterans' Allowance Act was introduced in 1930 to make provision for the maintenance of veterans of the Canadian Expeditionary Force; veterans of His Majesty's Forces or the Forces of His Majesty's Allies who were domiciled in Canada at the time of enlistment for the First World War, provided they were incapable of maintaining themselves on attaining the age of 60 or at any age, if permanently unemployable.

The War Veterans' Allowance Act, 1946, was enacted in August, 1946, to replace the former legislation, and it was further amended in June, 1948. It enables the Board to grant allowances to the following:—

- (1) a veteran of the North West Field Force;
- (2) a veteran of the South African War;
- (3) a veteran of the First World War, 1914-18;
- (4) a veteran of the Second World War, 1939-45;
- (5) a member of the South African Military Nursing services, domiciled and resident in Canada prior to becoming a member and who has served any place outside Canada;
- (6) a person domiciled and resident in Canada certified by the Under Secretary of State for External Affairs as having been enrolled by the United Kingdom authorities for special duty in war areas during the Second World War;
- (7) duly selected and approved supervisors of—
 - (a) Canadian Legion War Services Incorporated;
 - (b) The National Council of the Young Men's Christian Association of Canada;
 - (c) Knights of Columbus Canadian Army Huts; or
 - (d) Salvation Army Canadian War Services who served outside the Western Hemisphere;
- (8) dual service veterans—
 - (a) a person who served during the First World War and the Second World War as a member of His Majesty's Canadian Forces and was enlisted or obligated to serve in such forces without territorial limitation; or
 - (b) a person who served during the First World War as a member of His Majesty's Forces other than Canadian forces, was domiciled in Canada when he became a member of the said forces, and was a member of His Majesty's Canadian forces during the Second World War, enlisted or obligated to serve without territorial limitations, and who has been honourably discharged or has been permitted honourably to resign or retire from such forces;
- (9) a member of the U.S.A. Forces of the First World War domiciled in Canada at the time of enlistment and has again taken up domicile in Canada;
- (10) widows and orphaned children of the above veterans.

The War Veterans' Allowance Act provides for three classes of veterans:—

- (1) the veteran who has attained the age of 60 years;
- (2) the veteran of any age who, because of physical or mental disabilities, is permanently unemployable;
- (3) the veteran, regardless of age, who is, in the opinion of the Board, incapable of maintaining himself and unlikely to become capable due to a combination of reasons or handicaps, physical, mental or economic.

Veterans must have served in a "theatre of actual war", or be in receipt of pension or have received a final payment by agreement in commutation of pension. Widows and orphans of veterans are admitted to the benefits of the Act providing the veteran himself was eligible during his lifetime.

While the amount of any allowance is discretionary with the Board, the maximum permissive income from all sources (including War Veterans' Allowances) for a single veteran is \$610 per annum and \$1,100 for a married veteran or widower with dependent children. The basic allowance under the Act is \$40.41 and \$70.83 per month to single and married veterans, respectively, but the maximum permissive income from all sources remains as outlined above.

Provision has been made for (veterans' care) treatment for recipients of War Veterans' Allowance, other than widows. Provision has been made also for the continuation of an allowance on behalf of a child until the age of 21 years, for educational purposes. Allowances are not payable outside the Dominion of Canada. Old Age Pension and War Veterans' Allowance or Widows' Allowance cannot be paid concurrently.

The basic allowances for widows are:—

- (1) \$485 per annum to a widow without dependent children;
- (2) \$850 per annum to a widow with dependent children.

The basic allowances for orphans are:—

- (1) \$360 per annum for one orphaned child;
- (2) \$648 per annum for two orphaned children;
- (3) \$730 per annum for more than two orphaned children.

The following exemptions from income are allowed:—

- (1) single recipient; income from any source not exceeding \$125 per annum;
- (2) married recipient; income from any source not exceeding \$250 per annum.

In addition, the following exemptions are provided for all groups of recipients where applicable:—

- (1) casual earnings;
- (2) unearned income not exceeding \$25 per annum;
- (3) provincial or municipal relief or Mothers' Allowance paid on behalf of dependent children;
- (4) any gratuity paid or credit grant under the War Service Grants Act, 1944;
- (5) any sum payable under Sect. 26 of the Pension Act;
- (6) any additional allowance paid under the Pension Act on account of any children;
- (7) any pension or grant received by reason of a military decoration;
- (8) any allowance payable under the Family Allowances Act, 1944;
- (9) property in which the recipient resides is not taken into account providing its capital value does not exceed \$4,000.

Since the enactment of the legislation to Mar. 31, 1948, a total of 52,529 awards have been made by the War Veterans' Allowance Board. Of these, 24,172 were discontinued because of death and other reasons, leaving 28,357 recipients representing an annual liability of \$14,169,036.

The financial benefits available to veterans under the Veterans' Land Act will be found in Section 5, Subsection 3, pp. 1156-1158.

Section 5.—Rehabilitation of Veterans

The Veterans' Welfare Division of the Rehabilitation Branch of the Department of Veterans Affairs is responsible for the efficient administration of benefits available to discharged members of the Forces, under the terms of the Veterans' Rehabilitation Act and regulations drawn up under that Act, other than matters relating to vocational, technical or university training. Briefly, these functions are as follows:—

(1) *Administration of out-of-work allowances.* Payment of such allowances, under an agreement with the Unemployment Insurance Commission, is now being made by the Department of Labour on authorization of the Department of Veterans Affairs. As applications for this allowance must be made within 18 months after discharge, it naturally follows that the numbers receiving this allowance are declining rapidly.

Administrative machinery to place veterans in employment comes under the jurisdiction of the Department of Labour, which Department is also charged with the administration of the Reinstatement in Civil Employment Act. Under arrangements made between the two Departments, however, the Department of Veterans Affairs is accorded the privilege of finding employment for the seriously disabled in collaboration with officials of the National Employment Service.

As a result of this close liaison between the Departments in all centres where the National Employment Service maintains an office, other than in those centres where the Department of Veterans Affairs maintains a District or Sub-district Office, the Employment Service has on its staff a Veterans Officer who is available to give advice and guidance to veterans on matters relating to their rehabilitation which come within the jurisdiction of the Department of Veterans Affairs.

(2) *Administration of allowances for veterans awaiting returns from private enterprise engaged in on their own account, including allowances available to veterans who have taken up full-time farming or commercial fishing under the terms of the Veterans' Land Act.* Close liaison is maintained by the Veterans' Welfare Division and the Re-establishment Credits Division of the Rehabilitation Branch and officials of the Veterans' Land Act Administration and care is exercised to ensure that the veteran will get the best possible advice before embarking upon an enterprise or business. In this connection also it should be noted that members of Citizens' Committees, familiar with business opportunities in the particular centre in which the veteran wishes to establish himself, have co-operated in advising the Department and these veterans of the chances of the veteran succeeding in his proposal.

(3) *Administration of allowances available to veterans who are temporarily incapacitated.* This benefit is designed particularly to care for veterans who do not require any active remedial hospital care to which they may be entitled under the Department's enabling authority but where, because of some ailment, they may be debarred from working for a short period.

(4) *Administration of the Unemployment Insurance contributions, payable for the period of service (or from June 30, 1941) on the completion of 15 weeks in insurable employment after discharge.*

Officials of the Veterans' Welfare Division also act as the veteran's friend in advising with regard to rights and privileges under regulations administered by other government departments, federal, provincial and municipal.

Subsection 1.—Discharges, Employment and Allowances

Discharges and Employment.—By Feb. 28, 1947, the work of demobilization was completed. Cumulative discharges from September, 1939, to September, 1947, are given in the following statement. These figures are subject to revision since certain duplications of records have not yet been eliminated.

<i>Service</i>	<i>Male</i>	<i>Female</i>	<i>Total</i>
	<i>No.</i>	<i>No.</i>	<i>No.</i>
Navy.....	90,321	6,565	96,886
Army.....	656,158	25,155	681,313
Air Force.....	201,146	16,987	218,133
TOTALS.....	947,625	48,707	996,332

Although the numbers of veterans who have taken advantage of the Vocational Training, Educational Training, and Veterans' Land Act provisions seem large, the majority of veterans have returned to civil employment. Return to civil life was greatly aided by the National Employment Service of the Department of Labour, which, through a policy of veterans preference, made 930,346 placements on behalf of veterans from September, 1943, to March, 1948, 810,816 of these placements being made on behalf of veterans of the Second World War. These figures do not represent the number of veterans placed as two or more placements are often made in an attempt to settle a veteran after discharge.

Unemployment among veterans of the Second World War has not, on the whole, been serious so far. The peak of unemployment was reached during the first quarter of 1946, when it followed the seasonal trend. Table 4 shows the number of veterans registered monthly with the National Employment Service as unemployed from Jan. 1, 1947, to Mar. 31, 1948.

4.—Veterans Registered with the National Employment Service as Unemployed, by Months and Sex, January, 1947, to March, 1948

¹ Not recorded separately after February, 1947, but included with women veterans of the Second World War.

Out-of-Work Allowance.—Up to Mar. 31, 1948, 161,874 veterans were assisted in their rehabilitation through this Allowance, paid if the veteran is fit and available for work but no work is available for him. As would be expected the majority of these veterans made use of the Allowance during the calendar year 1946 when they were being discharged from the Armed Forces in large numbers.

**5.—Veterans Receiving Out-Of-Work Allowances, by Sex, Years Ended
Mar. 31, 1943-48**

Totals.....	158,898	2,976	161,874

¹ November, 1941, to Mar. 31, 1943.

The number of veterans receiving the Allowance at any given time is rapidly decreasing compared with the number of veterans unemployed. For the period March to June, 1946, the number was from 60 to 70 p.c. of those registered as unemployed; for January and February of 1947, it was 45 p.c., and for February and March, 1948, it fell to a low of 8.3 p.c. The reason for this is that the Allowance was payable only in the 18 months immediately following discharge and time has now ruled out most veterans.

Experience has shown that, although it has been necessary to carry some individuals on the Allowance for a period in excess of 40 weeks (the maximum allowable is 52 weeks) the majority of veterans who received this type of assistance required it for a period of less than ten weeks.

Because of the large number of veterans settling in agriculture, the payment of this Allowance has shown a decided seasonal variation, reaching a peak in August, 1946, when approximately 25,000 veterans received the Allowance, and declining to approximately 2,064 veterans receiving the Allowance in February, 1948.

A considerable number who received the Allowance during the summer, while engaged on their own account, became employed in wage-earning occupations during the winter with the intention of returning to their farms in the spring.

The value of the legislation authorizing this Allowance is best shown by the number of veterans utilizing the Allowance and by the results so far produced. Of the number of veterans who, up to Feb. 28, 1948, had discontinued the use of the Allowance, about 89 p.c. had been satisfactorily established and had drawn the Allowance for an average of 29 weeks only.

Unemployment Insurance Contributions.—During the calendar year 1947 there was a great increase in the numbers of veterans established in insurable occupations and on whose behalf contributions to the Unemployment Insurance Fund were paid. From November, 1941, to March, 1948, contributions were paid on behalf of 314,827 veterans as follows: 1942, (November, 1941, to Mar. 31, 1942), 7; 1943, 334; 1944, 4,388; 1945, 15,289; 1946, 31,940; 1947, 84,205; and 1948, 178,664.

Temporary Incapacity Allowances.—The number of veterans who have received assistance under this provision has been relatively small compared with the numbers utilizing the other allowances. The Temporary Incapacity Allowances have rarely exceeded 120 at any one time since the end of the War. During March, 1948, they numbered only 13 cases. Up to Mar. 31, 1948, about 4,711 veterans had received this Allowance.

Subsection 2.—Vocational Training

The vocational training program, authorized under the Veterans' Rehabilitation Act, is dealt with in the Labour Chapter at pp. 654-657, and the University Training for Veterans program in the Education Chapter at pp. 321-323.

Subsection 3.—The Veterans' Land Act

The Veterans' Land Act is designed to assist the veteran who is eligible by reason of required Active Service, and qualified for the particular undertaking, in becoming established on the land in full-time farming, part-time farming (small holding), or commercial fishing. Its financial benefits enable the veteran to start off with a substantial equity, which past experience has demonstrated is essential to sound credit land-settlement operations. The Director of the Act may:—

- (a) contract with any veteran duly certified as qualified, for the sale of land and the provision of permanent improvements, live stock and farm equipment or fishing gear up to a total cost of \$6,000; or
- (b) contract with such veteran occupying suitable farm land under private agreement of sale, or lease of reasonably long duration, for the sale of land, permanent improvements, building materials, live stock and farm equipment, up to a total of \$5,800; or
- (c) loan on the security of a first mortgage, on a farm already owned by the veteran, up to \$4,400 for the consolidation of debts and improvement of farm—including the purchase of live stock and farm machinery; or
- (d) grant to such veteran up to \$2,320 to assist in his establishment on Provincial Crown land; or in the case of an Indian veteran on Indian Reserve land.

Space does not permit mention of the various financial terms other than that each settlement except item (c) above, carries with it a grant of up to \$2,320, conditional on satisfactory fulfilment of settlement contract for 10 years. The loan portion of a contract may be amortized over a period of up to 25 years with interest at 3½ p.c. Item (c) is wholly repayable, but it does not extinguish right to re-establishment credit as is the case in items (a), (b) and (d).

The Act is more fully dealt with at pp. 1072-1073 of the 1946 Year Book, while two important changes made during 1946 are given at pp. 1148-1149 of the 1947 edition. An additional amendment was made in 1947 whereby veterans, established under the Act in the spring wheat areas of Canada, may elect to alter the terms of payment provided for in their contracts by entering into a crop-share agreement as collateral to the terms of their original agreements for sale. This crop-share agreement provides that the veteran shall deliver to the Director one-half of his crop in excess of six bushels per acre, but not exceeding 18 bushels per acre. When the proceeds from the grain thus delivered to the Director is less than the amount due under the firm term agreement, the amount of the deficiency is extended to the end of the firm agreement and interest accrues only on the principal so extended. Thus, the account of such a veteran is never in arrears.

The calendar year 1947 witnessed continued heavy settlement operations under the Veterans' Land Act, a total of approximately 17,779 veterans being qualified, and financial assistance being approved for about 15,535; 1,908 houses were constructed and were ready for occupancy during the year, 294 of which were built under multiple-unit contracts on departmental subdivisions, and 1,614 under individual contracts for specific veterans. Agreements have been reached with all provinces, other than Nova Scotia and Prince Edward Island, for settlement of veterans on Provincial Crown lands.

Subsection 4.—Casualty Rehabilitation

The rehabilitation of veterans with physical disabilities is a process that commences at the time a disabling condition is diagnosed. The objective of this rehabilitation is the return of the disabled veteran to the best possible physical, mental, social, economic, and vocational adjustment and usefulness of which he is capable. This definition sets not only the standards to be attained, but also indicates the problem areas encountered most frequently.

The compass of rehabilitation for the disabled is so broad that every division of the Department of Veterans Affairs, together with many other Government and private agencies, may be required to contribute to the provision of the total range of services necessary in any individual case. As it is the aim of the Government of Canada's rehabilitation program that disabled veterans be prepared to return to the successful performance of jobs in normal competitive industry, industry must itself co-operate by receiving the disabled into its employ. Finally, the disabled themselves play the most important role in this program. They must use intelligently the services provided and must justify the confidence of employers. The vast majority of disabled veterans are demonstrating in their efforts to rehabilitate themselves qualities of initiative and determination of the highest possible order and are proving to be efficient, safe and reliable employees.

The Casualty Rehabilitation Division, the function of which is to provide vocational guidance, assistance in securing suitable employment and vocational after-care, maintains a register of all those veterans whose disabilities in relation to other factors, such as education, previous employment experience, and personality, constitute a serious problem in occupational adjustment. The most common disabilities of veterans so registered, and the number in each group as at Mar. 31, 1948, were:—

<u>Disability</u>	<u>No.</u>
Amputation.....	2,055
Other serious disabilities of the muscular and skeletal systems.....	10,117
Partial and total losses of hearing and sight.....	1,891
Injuries to the central nervous system involving paralysis of one, two or more limbs or organs; epilepsy and other conditions.....	1,026
Diseases of the heart and vascular system.....	2,423
Tuberculosis and other respiratory disabilities.....	8,439
Mental and emotional disabilities.....	745
Others.....	3,344
TOTAL REGISTRATION.....	30,040

Rehabilitation progress of seriously disabled veterans made between May 31, 1947, and Mar. 31, 1948, was as follows:—

<u>Status</u>	<u>May 31, 1947¹</u>	<u>Mar. 31, 1948</u>
Employed.....	12,701	20,384
Unemployed.....	1,987	1,785
Receiving treatment, training or other services.....	10,680	6,472
Rehabilitation not feasible.....	180	785
Status unknown.....	2,914	614
TOTALS.....	28,462	30,040

¹ First month for which comparable figures available.

The continued increase in the proportion of disabled veterans who are employed is quite satisfactory. At the same time, it cannot be overlooked that at Mar. 31, 1948, there were still over 6,000 veterans receiving treatment, training or other services from the Department, and almost 2,000 more who were unemployed.

Also, the increase in the number of registrations over the ten-month period, namely 1,578, or approximately 150 per month, does not give a true picture of the number of new cases of disability occurring. Approximately 400 new cases of severe disability among veterans arise each month, but this is offset by the fact that about 250 cases are struck from the registration roll in the same period. These latter are struck from the registration roll because their conditions have been improved more

than had been first expected and their disabilities have disappeared. The approximately 400 new cases per month arise mainly in departmental hospitals. The principal source of these cases is from among veterans entitled to treatment for an exacerbation of pensionable disabilities or otherwise entitled to free treatment from the Department for conditions not connected with the Service.

Table 12 shows the rehabilitation status of registered disabled veterans as at Nov. 15, 1947, in accordance with the extent of their disabilities, as measured by the Canadian Pension Commission.

12.—Rehabilitation Status of Seriously Disabled Veterans According to Percentage of Entire Disability as at Nov. 15, 1947

NOTE.—Veterans are registered only when their disability in relation to their experience, education and other factors presents a problem in occupational adjustment. This table covers all veterans whose disabilities are assessed at 75 p.c. and over, and a constantly decreasing proportion of those whose disabilities are assessed at lower percentages.

Item	Not in Receipt of a Pension ¹	1 to 24 p.c. Pension	25 to 49 p.c. Pension	50 to 74 p.c. Pension	75 to 100 p.c. Pension without helplessness allowances ²	75 to 100 p.c. Pension with helplessness allowances	Total

¹ Includes cases in which entitlement has been conceded but where disability has not been assessed pending completion of medical treatment, as well as cases of non-pensionable disability.

² Does not include the war blinded.

While almost any kind of assistance might be important in the rehabilitation of a given case, the following rehabilitation services are those that experience has proven to be generally the most important: (1) medical treatment, including medical rehabilitation; (2) provision of artificial limbs, braces, appliances and similar devices including hearing aids; (3) vocational guidance; (4) vocational, technical, or university training; (5) maintenance allowances; (6) assistance towards securing suitable employment; (7) land settlement; (8) job placement; (9) medical, social and vocational after-care. The provision of these services calls for the careful co-ordination of the skills of many professional and semi-professional workers; physicians, surgeons and nurses; physical and occupational therapists; rehabilitation officers and instructors; limb and brace fitters; psychologists and social workers, to name but a few.

Disabled persons do not face common problems. Only a rehabilitation program that can be modified to meet the needs of each individual is suitable. The doctor co-ordinates the medical aspects of the patient's rehabilitation, and gives direction as to how the patient's medical condition may affect his social and vocational re-establishment. The Department has long recognized that it is just

as necessary to deal with the non-medical aspects of the patient's rehabilitation in an equally co-ordinated manner. It is for this reason that the Casualty Rehabilitation Division has been organized.

A continuous service directed to public and employer relations is maintained. During the year, leaflets were issued and Casualty Rehabilitation Officers addressed gatherings of employers and community groups giving information about the employment of the disabled.

The Casualty Rehabilitation Division is also responsible for the provision of certain welfare services within departmental hospitals to all patients whether they are seriously disabled or not.

Among the agencies working with the Department in its program for the rehabilitation of disabled veterans are the National Employment Service, the Canadian Vocational Training organization, the Canadian National Institute for the Blind, the War Amputations of Canada, the National Society for the Deaf and the Hard of Hearing, and the Canadian Paraplegic Association.

Subsection 5.—Rehabilitation of Women

During the First World War only the Nursing Service was open to women, but the Second World War saw women serving in the Army, Navy and Air Force in almost every capacity. By December, 1946, all of the nearly 50,000 women members of the Canadian Armed Forces had been demobilized, with the exception of a few Nursing Sisters and Dietitians.

As a natural sequence to the established ratio of one woman to every 20 men in the Armed Forces, vacancies were designated on the Staff of the Rehabilitation Branch of the Department of Veterans Affairs for women executives, counsellors and interviewers.

Training for ex-service women under the auspices of the Department of Veterans Affairs is on the same basis and at the same rates as for the male veterans. Up to the end of 1947, a total of 13,276 women veterans had availed themselves of opportunities for training, 27 p.c. of the total number of ex-service women. Of that number 10,283 women had entered into some phase of vocational training and 2,993 had chosen university courses or matriculation courses leading to university. Follow-up on these cases by district staffs indicates that little difficulty has been encountered to date with respect to employment on completion of vocational training. In most instances, through a three-way liaison, Department of Veterans Affairs-Canadian Vocational Training-National Employment Service, employment for individuals is arranged as the classes draw to a conclusion. Many have taken training-on-the-job in such diversified occupations as florist, fur finisher and cutter, photographer, etc. Altogether, women have trained for approximately 100 occupations.

At the end of December, 1947, 43,337 applications for re-establishment credit to the amount of approximately \$4,107,049 had been approved for ex-service women. As at the same date, 147 had qualified under the Veterans' Land Act. Most of these are established on small holdings, but a few own and operate farms under the full-time farming arrangement.

Pensioners among the women up to December, 1947, numbered 1,235. They receive the same pension rates as the men and the same consideration in the matter of training and employment. Liaison between the Women's Section of the Depart-

ment of Veterans Affairs and the Casualty Rehabilitation Section has resulted in hospital visiting for the purpose of counselling toward employment or training upon discharge from hospital, or arranging for correspondence courses during hospitalization.

During their service careers, many women formed new concepts of the opportunities for employment available in civilian life. For the first time, in many cases, these women could choose a career. With the co-operation of the National Employment Service, women veterans who wish it are assisted in obtaining employment in keeping with their experience and academic background. Each time an application for Out-of-Work Allowance is received, personal follow-up is carried out in the hope that the applicant may be trained for, or recounselled into suitable alternative employment. The Department of Veterans Affairs has made Armed Service contributions to the Unemployment Insurance Fund on behalf of 10,066 ex-service women.

Citizens Committees, Women's Clubs and organizations have been invaluable in helping the ex-service woman to fit into and take part in community life. Full co-operation with the Department of Veterans Affairs has been given, particularly in the matter of finding accommodation for the women who have moved to other centres to take training or employment. Clubs in many communities have given their support in making personal contact with the veteran on her return home, and have been instrumental in helping her face her problems.

Subsection 6.—Rehabilitation of Older Veterans

The Department of Veterans Affairs in 1946 added to its establishment a Special Adviser to the Deputy Minister to deal with matters concerning veterans of both World Wars. Since then considerable progress has been made in the establishment of a continuous employment and welfare service for veterans over 45 years of age.

As the employment rehabilitation services for some 50,000 veterans of the First World War, who also served in the Second World War, were being planned it was discovered that there was a very considerable number of veterans of the First World War who had made a worthwhile contribution during the years 1939-45 but were handicapped in the post-war employment market. Likewise, older veterans of the South African campaign and the First World War, including ex-members of His Majesty's Imperial Forces domiciled in Canada many years, required assistance from the Department.

It is estimated that this grouped class numbers 350,000, many of whom have acquired age but not security. There has developed a great reluctance in business and industry to hire workers of middle age, and a greater reluctance to employ those in the late fifties and early sixties. Yet the economy of the country demands the productive capacity of such workers be fully utilized in gainful employment.

The Department of Veterans Affairs has established throughout its District Offices small specialist staff sections whose responsibility it is, in co-operation with the National Employment Service, to screen, classify and counsel these older veteran applicants and to assist them to obtain work suited to their capacity and ability.

Constant studies are maintained of employers' objections to hiring older workers, the effect on pension retirement plans, group insurance, industrial accident figures, and productivity records, etc. Efforts are made through mailings, press, radio, public addresses, etc., to offset these objections and employers are responding well to the proved values of the stable older worker in industry.

Progress has been made too, through such agencies as the Civil Service Commission, and the Corps of Commissionaires in the allocation of non-career work not requiring skill or physical endeavour.

The screening process finds those veterans unable or only partially able to perform gainful work. These veterans are referred to the War Veterans Allowance Board or other agencies.

On Apr. 1, 1947, 9,262 older veterans were registered for employment at National Employment Service Offices. During the following 12 months, there were 46,329 additional applications and 46,690 veterans were assisted into employment or other means of maintenance.

Subsection 7.—Assistance in Social Problems

The social adjustment of individual veterans is of real concern to both the Treatment and Rehabilitation Branches of the Department of Veterans Affairs and the highest degree of skill in dealing with individual social problems is desirable on the part of all personnel in the Department.

The Social Service Division consists of trained social workers whose purpose is to increase the social work knowledge and understanding of members of the Department who see the veteran at first hand. It is also the function of the Division to see that existing social services are utilized to the maximum in dealing with problems presented by the veteran who comes to the Department for assistance. It is a basic assumption that the Department must not establish any social service for the veteran which is already available to him as a member of the community in which he lives. In order to prevent such duplication of service, it is necessary for the Social Service Division to work in close co-operation with local social agencies, community chests and councils, municipal, provincial and federal welfare departments, as well as schools of social work.

Section 6.—Veterans Insurance

The Veterans Insurance Act which came into force on Feb. 20, 1945, provides that veterans who were engaged in service during the Second World War, the widows and widowers of veterans, disability pensioners under the Pension Act in receipt of pensions relating to the War, most members of the Active Forces, and certain merchant seamen, may contract with the Government of Canada for life insurance, usually without medical examination. The period of eligibility ends six years after the coming into force of the Act or six years after discharge from Service, whichever is later. For the Active Forces generally it will end on Apr. 1, 1952, and for the eligible merchant seamen it will end on Feb. 20, 1951.

The amount of insurance may be any multiple of \$500 up to a maximum of \$10,000. The plans of insurance available are 10-payment life, 15-payment life, 20-payment life, and life with premiums payable until age 65 or age 85. The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may be used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum at death is \$1,000; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.

13.—Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1946-48

Year Ended Mar. 31—	Insurance Issued During Year		Insurance in Force at End of Year		Death Claims Approved During Year	
	No.	\$	No.	\$	No.	\$

NOTE.—Certain phases of Federal Government activity, such as the operations of the International Joint Commission and certain scientific activities of the Department of Mines and Resources were dealt with in this Chapter of the 1930 edition of the Year Book (pp. 1014-1017). These branches of Miscellaneous Administration have not undergone wide change and, therefore, the material has not been republished since that time.

Section 1.—Public Lands

In Table 1, summarizing the land area of Canada, items 2, 3 and 4 are obtained from Federal Government sources and items 5 and 6 from Provincial Government sources. In the majority of cases the area of lands alienated from the Crown or in process of alienation (item 1), as calculated by balancing the figures, agrees with the area as estimated by the Provincial Departments concerned.

1.—Classification of Lands in Canada, by Tenure, (*circa*) 1948

NOTE.—The land area of Canada classified by surface resources is shown at pp. 28-29.

Tenure	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles

¹ Includes the Gatineau Park (25 sq. miles) and the Quebec Battlefields Park (0.36 sq. mile) which are under Dominion jurisdiction but which are not technically National Parks.

² Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks.

³ Includes Wood Buffalo Park (which, although reserved by the Dominion, is not administered as a National Park) and the Tar Sands Reserve (2,068 acres).

⁴ Includes that portion of the Wood Buffalo Park in N.W.T.

Subsection 1.—Dominion Public Lands*

The public lands under the administration of the Federal Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay; lands in Yukon Territory; National Parks and National Historic Sites; Forest Experiment Stations; Experimental Farms; Indian Reserves; Ordnance and Admiralty Lands; and, in general, all lands held by the several Departments of the Federal Government for various purposes connected with Dominion administration, including the Tar Sands Reservation comprising four areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta. The lands and other natural resources lying within the boundaries of Manitoba, Saskatchewan, Alberta and British Columbia, formerly administered by the Federal Government, were transferred in 1930 to the administration of the provinces concerned.

The largest areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 1,458,784 square miles or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is 60°N. latitude. In Europe, the cities of Oslo, Stockholm, and Leningrad are near this line; about three-quarters of Norway, two-thirds of Sweden, Finland, and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Lands and Development Services Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order.

The Northwest Territories.—Developments in the mining industry, particularly in the Yellowknife District, accounted for much of the activity in the Northwest Territories in 1947. The wave of prospecting and staking that reached a peak in 1945 continued to show a decline, but systematic examination of ground already staked was continued and the development of promising properties planned. Gold production in the Territories was maintained, transportation facilities were improved, and many projects designed to provide better municipal and other services in Yellowknife Settlement and district were undertaken.

* Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands and Development Services Branch, Department of Mines and Resources, Ottawa.

Some interest in mining and prospecting activities was shown in the area immediately west of Hudson Bay and in the Arctic area in the vicinity of Bathurst Inlet. In the Mackenzie mining district, interest was revived in the lead-zinc deposits near Pine Point on the south shore of Great Slave Lake. The location at depth on the Con and Negus properties of the continuation of ore bodies similar in structure to those occurring on the Giant Yellowknife property was felt to have ensured these mines a long productive life. The Con-Rycon mines were still the largest gold producers in the Northwest Territories, milling about 300 tons of ore a day. Negus Gold Mines Limited, the second largest producer in the Territories, milled about 125 tons a day during 1947. The other mine producing gold during that year was the Thompson-Lundmark; after being reconditioned, this mine milled about 100 tons of ore daily. The Giant Yellowknife Gold Mines Limited production began during the summer of 1948. Shaft sinking operations and other development work are being continued at the properties of Discovery Yellowknife Gold Mines Limited; Sunset Yellowknife Gold Mines Limited; Diversified Mining Interests (Canada) Limited; North Inca Mines, and several other companies. In general, mining enterprise in the Territories was handicapped by lack of finance and power, but the latter deficiency will be overcome by the completion of the Snare River power development. The new plant will supplement power furnished at present by a development on the Yellowknife River, near Prosperous Lake.

The production of pitchblende concentrates was continued at the mine of the Crown Company, Eldorado Mining and Refining (1944) Limited, on Great Bear Lake. Production figures are not available for publication. This property is one of the world's principal sources of radium and uranium.

Production of petroleum products was continued by Imperial Oil Limited at Norman Wells in the lower Mackenzie Basin. The greater part of this output was processed at the Norman Wells refinery, and oil products, including gasoline and fuel oil, were shipped for consumption at the Eldorado mine and in the Yellowknife district.

The total value of mineral production in the Northwest Territories in 1947 was \$2,720,988. The value of gold was \$2,188,095, silver, \$32,655 and crude petroleum, \$500,238.

During the fiscal year ended Mar. 31, 1948, 1,466 miners' licences, 2,301 quartz grants and 1,933 assignments of mineral claims were issued. In addition, 23 leases comprising 1,078.74 acres were issued under the Quartz Mining Regulations. Three annual permits were issued under the Domestic Coal Mining Regulations, and one lease issued under the Coal Mining Regulations was in good standing.

Work is being continued on the installation of a modern water and sewer system at Yellowknife townsite and an airport has been established at Long Lake, four miles from that settlement. During 1947, a large number of buildings were constructed at Yellowknife including a 40-bed Red Cross hospital and a combined public and high school. In addition, day schools are being erected at Hay River, Rocher River, Fort Smith and Fort Norman. These are well constructed, modern buildings designed to serve as community centres.

Construction work commenced in 1944 and is now well advanced on the all-weather highway from the railhead at Grimshaw, Alta., to Hay River Settlement on Great Slave Lake. The cost of this project is being shared by the Federal Govern-

ment and the Province of Alberta. This new highway will enable heavily loaded trucks to convey goods to the south shore of Great Slave Lake.

The Geological Survey of Canada maintained six mapping parties in the Northwest Territories during the summer of 1947, covering the Canso River area, the Lac de Gras area, Indin Lake, the Ranji Lake and Chalco Lake areas, and the McAlpine Channel area. The detailed study of the complex Yellowknife Bay gold belt was continued from 1946, and embraced the Con, Rycon, and Negus mining properties. In addition to these standard mapping projects, other geological investigations and reconnaissance surveys were undertaken by qualified officers of the Federal Government.

The fur trade continued to be an important factor in the economy of the Territories. A catch of 488,039 pelts worth a total of \$1,658,754 was recorded for the year ended June 30, 1947. The trapping of fine furs is the chief occupation of most of the native population, and hunting and trapping in the Territories are restricted mainly to natives and to half-breeds leading the life of natives.

Considerable progress was made in the organization and development of an improved forest conservation and wildlife protection service. Headquarters are at Fort Smith, and regular patrols are maintained. Modern fire fighting equipment has been provided, and it is anticipated that the improved operations will show satisfactory results in restoring wildlife in the Mackenzie district.

The annual Eastern Arctic Patrol was carried out in 1947 and, following the wreck of R.M.S. *Nascope* off Cape Dorset in Hudson Strait on July 21, 1947, arrangements were made to service northern Baffin Island posts by the Hudson's Bay Company chartered vessel *North Pioneer*, which was despatched from Montreal soon after the loss of the *Nascope*. Posts in the Hudson Bay region were serviced from railhead at Churchill through the facilities of the Hudson's Bay Company.

Yukon Territory.—The gold production of Yukon showed a favourable increase during 1947. As in past years, most of the gold was obtained from placer operations in the Dawson district. A new find on the Firth River, with promising prospects, was a significant feature of the year's activities, and it is anticipated that more prospectors will be attracted to this area. Development continued of the Keno Hill silver-lead deposits in the Mayo district with an increased amount of ore being mined and concentrated. Work in this area was handicapped, however, by transportation difficulties due to extremely low water in the Stewart River.

The total value of gold produced in Yukon during 1947 was \$1,671,075. The deposits in the Keno Hill area of the Mayo district produced 573 tons of lead valued at \$156,556 and silver production in Yukon was valued at \$267,877.

Yukon Consolidated Gold Corporation Limited, continued to be the principal producer in the placer mining field, with six dredges in operation. Yukon Gold Placers Limited, Clear Creek Placers Limited, and a number of individual miners carried on operations in the Dawson mining district, while Mayo Mines Limited, Yukon Northwest Exploration Limited, United Keno Hill Mines Limited, and a number of smaller companies carried out development work in Mayo district. In the Whitehorse mining district, the greatest placer activity was on Burwash Creek, where the Burwash Mining Company operates company claims, as well as

those owned by other interests. Lode mining was featured by extensive development operations in the Victoria Creek, Crescent Lake, Whitehorse Copper Belt, Nansen Creek and other areas, as well as at various points on the Alaska Highway.

The increased mining activity in Yukon gave rise to the problem of supplying the various properties with fuel, and to meet this situation the Tantalus Butte coal mine near Carmacks was brought into production during the summer of 1947.

The Geological Survey of Canada maintained three parties in Yukon during the summer of 1947, all mapping on a scale of 1 inch to 4 miles. Particular attention was paid to the Whitehorse and Dezadeash areas, both of which are readily accessible by road and contain important copper deposits. In the north, mapping was continued in the McQuestin area between Mayo silver-lead mining camp and the Klondike.

Maintenance of the Alaska Highway passed from United States authority to the Northwest Highway System (Canadian Army) on Apr. 1, 1946, but owing to limited accommodation the route remained closed to all travellers except maintenance personnel, prospectors, organized hunting parties, and others having business in the region or in Alaska. As a result of improvements, however, restrictions on tourist travel on the Highway were lifted early in 1948. In connection with the maintenance of the Alaska Highway in Yukon, there are now in force 11 leases of privately owned lands.

In the field of agriculture, the Federal Government experimental substation, opened in 1945 on the Alaska Highway approximately 100 miles west of Whitehorse, was continued. Field tests were conducted and garden plot trials were undertaken in 1947 with encouraging results.

The fur trade continued to be a source of revenue for the inhabitants of Yukon, especially the native population, and during the year ended June 30, 1947, the total catch numbered 58,777 pelts valued at \$373,176.

Subsection 2.—Provincial Public Lands

In the Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block), the public lands have been administered by the Provincial Governments since Confederation. Since the transfer by the Federal Government of the natural resources of the Prairie Provinces and of sections of British Columbia, public lands in all provinces have been under provincial administration. In Prince Edward Island, all of the land is alienated and there are no provincial public lands.

In certain of the provinces extensive areas have been set aside from provincial lands as parks and reserves. These provincial areas are dealt with in Chapter I, pp. 36-40.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Deputy Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

Section 2.—The Indians and Eskimos of Canada

Subsection 1.—The Indians of Canada*

History.—The Indians, it is believed, came in successive migrations in pre-historic times from North Asia. They are divided into a number of distinct linguistic stocks and many tribal subdivisions with widely differing physical and psychological characteristics.

As early as 1670, during the reign of Charles II, instructions were given to the Governors of the colonies to the effect that Indians who desired to place themselves under British protection should be well received and protected. Records exist of numerous agreements and treaties dating back as far as the year 1664, made by the British with the Indians of New England, while Canada was still under French government. Later, it was found necessary to establish an office devoted solely to the administration of Indian Affairs and, in 1755, Sir William Johnson was appointed Indian Superintendent with headquarters in the Mohawk Valley, the country of the Six Nations Confederacy, in what is now the State of New York. The establishment of this office was the genesis of future Indian administrative organization in English-speaking North America. Following the American Revolution, the British Indian Office was removed to Canada, and a similar organization was established in the newly formed United States.

Before the advent of the European, the number of Indians was undoubtedly larger, but little reliable information is available as to the aboriginal population, during either the French or the early British regimes. The best estimate, however, of the aboriginal or Indian population of what is now Canada is slightly in excess of 200,000 or about double the present figure.

Shortly after the intrusion of White settlers throughout their domains the Indian population began to dwindle. The major contributing factors for this decrease were: (1) the necessity for sudden and often complete change in habits of life caused by inevitable contact with White settlers; (2) the near extinction of the buffalo and other species of wild game as major food, clothing and shelter items in the economy of Indian life, and the adoption of White man's foods; (3) the introduction of White man's diseases, such as measles, whooping cough, scarlet fever, smallpox, tuberculosis and venereal diseases; (4) the comparative closer confinement and congestion and the adoption of houses at permanent locations as contrasted with the former nomadic life in temporary tipis; (5) slowness to comprehend and appreciate the White man's way of life, which was so completely different from their own.

Succeeding generations slowly adopted White man's ways and, during the twentieth century, the Canadian Indian population has been increasing gradually but steadily until at present it is estimated at 126,000. There are some 600 separate communities known as "bands"—the administrative unit of the Indian population.

The Indian Affairs Branch takes a quinquennial census of the Indians under its control. The results of the latest of these censuses, taken in 1944, show a total of 125,686 Indians as compared with 118,378 in 1939 and 112,510 in 1934, an increase of 11.7 p.c. in ten years. Details are given in the Annual Report of the Department of Mines and Resources for 1947. The figures given in Table 2 are those of the

* Prepared under the direction of R. A. Hoey, Director, Indian Affairs Branch, Department of Mines and Resources, by T. R. L. MacInnes.

eight Dominion Decennial Censuses since Confederation, and include some thousands of persons of Indian racial origin who are not on the reserves but are living as ordinary citizens of Canada.

¹ Census figures in the organized provinces and estimates for the rest of Canada. ² Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs for that year.

³ The decrease in the Indian population of the Northwest Territories is due to the extension of the boundaries of Quebec, Ontario and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

⁴ Includes 34,481 'half-breeds'.

Administration.—After Confederation the administration of Indian Affairs, which had been under the management of the several provinces, came under the control of the Dominion of Canada. Pursuant to this authority the Dominion Parliament enacted various legislation concerning Indians, which was first consolidated in the Indian Act, in 1876. That Dominion statute under which Indian administration is still conducted, contains nearly all the Canadian law dealing expressly with Indians. Probably there is no other legislation that deals with so many and such varied subjects in a single Act. It may be said to deal with the whole life of a people. The present Act was consolidated in 1880 and has not been completely revised since that year, although it has been changed and amplified by amendments from time to time. It is the subject of a complete review and investigation by a Special Joint Committee of the Senate and the House of Commons.

Immediately following Confederation, Indian Affairs was attached to the Department of the Secretary of State. In 1873, when the Department of the Interior was created, Indian Affairs was transferred to it, as the Indian Affairs Branch. In 1880, under the provisions of the Indian Act, the Indian Affairs Branch became a separate Department and remained so until Dec. 1, 1936, when, by the Mines and Resources Act, it became a Branch of the newly created Department of Mines and Resources.

The activities of the Indian Affairs Branch include: management of Indian lands and reserves; trust funds; welfare projects; relief; family allowances; education; descent of property; rehabilitation of Indian veterans on reserves; Indian treaty obligations; enfranchisement of Indians; and a variety of other matters. The organization consists of a headquarters office at Ottawa, with about one hundred local agencies in the field, each agency being responsible for one or more reserves and bands.

Reserves.—Reserves, or lands set aside by the Federal Government for the use of Indian bands, number more than 2,000. They vary in size from a few acres to 500 square miles. Except by special expropriation for public purposes, these reserves cannot be alienated without the mutual consent of the Government and the Indian owners. All reserve land is community property and the individual holding, in so far as the land is concerned, is only the right of occupation, although the individual holder owns his improvements. Most Indians live on these reserves, which were designed primarily to provide them with a refuge where they could live, move, and have their being without fear of exploitation or molestation. In the far north, however, where the lands are unsettled, there is no need for reserves, though the Indians living there are organized into bands and dealt with as band groups for purposes of administration.

Trust Funds.—Many of the Indian bands have community trust funds which are administered for their benefit by the Indian Affairs Branch. These funds, derived mainly from the sale of natural resources, have increased from some \$200,000 in 1870, to more than \$18,400,000 in 1948. They represent the total of approximately 480 separate accounts.

Education.—Until about a century ago, Indian education was largely a missionary effort carried on by the churches and by the Indians themselves. Gradually the Government entered into the field and Indian education was developed under the joint auspices of the Government and leading religious denominations. At present, practically the entire cost of Indian education is being borne by the Government. Statistics of enrolment and attendance in Indian schools are given in the Education Chapter at pp. 323-324.

Paralleling the education of Indian children through day-school services, are the many and varied adult-education services which are specially designed to encourage economic adjustment of the Indians to modern life. This important work is receiving the close attention of the Department in all settled parts of the Dominion. The policy of the Department and the efforts of the staff are directed towards making the Indians self-supporting.

Welfare.—For humanitarian reasons and in the interests of national economy, the Indian Affairs Branch promotes farming, fishing, lumbering, trapping and other sound ventures on Indian reserves and throughout northern Canada at public expense. Pure-bred herd sires are purchased for use on Indian reserves in western Canada. In addition, during the years 1947-48, three pure-bred experimental herds have been established. Farm machinery for use by the Indians, under direction of local Indian agents and farm instructors, is purchased by the Department and remains the property of the Government. Lumbering is promoted on Indian reserves on which timber is mature, and assistance is rendered Indians in the preparation of lumber for building purposes. The Indian Affairs Branch operates 12 sawmills across the Dominion, owned outright or on a partnership basis with certain groups of Indians. This is in addition to numerous portable mills owned by the Indians themselves. The 1948-49 Indian Affairs Welfare Appropriation included an amount of \$802,315 for assistance to Indians in a modern home and related buildings program.

During 1948-49 special assistance was granted to needy Indians who reached the age of 70 years, \$241,590 being provided for this purpose. Payment started in September, 1948.

Handicraft and Home Industries.—In 1938, a small section of the Indian welfare and training service was established for the purpose of encouraging handicrafts and home industries. Loans from a revolving fund were made available to groups of Indians desiring to produce and market articles made on Indian reserves, and assistance was given in securing necessary materials.

In order to build up a stock of various lines and to assist in the setting of standards of quality, all goods produced on organized reserves are sent to a central warehouse at Ottawa. The articles produced are inspected by senior Indian workers on the reserves, and carefully inspected again by the Departmental craft supervisor when received at the warehouse. In addition to the production of basketry, bark and wooden articles of various types, several other projects were promoted in schools and on reserves, such as metal work, loom weaving, etc. During the war years, it was necessary to cancel some of these projects because of the scarcity of metal, fine weaving yarns and other materials and the Indian workers who were trained were profitably employed in craft studios.

Indian Medical Services.—Concern for the health of the Canadian aborigines began with the first landings of the European explorers and has persisted in varying degrees of intensity until the present. The sick were brought to Jacques Cartier for his blessing; surgeons accompanying troops of the Crown were instructed to give such attention as they could to the Indians, and by the 1820's physicians in the employ of Indian Affairs were devoting their full attention to the health of Indians.

Government health services for Indians have gradually expanded, until to-day there are 20 hospitals administered by the Federal Government together with a number of mission hospitals and nursing stations almost exclusively concerned with the care of Indians. Larger reserves have a full-time Departmental medical officer; smaller bands have attention on a part-time basis or, in some cases, the local physician receives fees for services rendered to Indians. Nursing care is provided by departmental nurses, field matrons or dispensers.

The present marked expansion of Indian health services began in 1928 when a separate Medical Branch was established in the Department of Indian Affairs. In 1945, Indian health services were transferred to the Department of National Health and Welfare and are now conducted through a small headquarters staff. A Dominion-wide staff of physicians, nurses and field matrons and dispensers arranges for medical attention and hospitalization, field nursing and general health services.

Fur Conservation.—Almost one-half, or some 60,000, of the Indian population of Canada are still located in the northern and outlying regions, and are very largely dependent on hunting and fishing for their livelihood. Their fortunes, therefore, fluctuate with fur catches and prices.

In recent years, the Government has made successful efforts to assist the Indian hunters and trappers by fur conservation and development projects. By special arrangements with the provinces, large areas have been set aside as Indian hunting preserves. Fur preserves, used as illustration stations and training grounds, are proving highly successful in helping the Indian to practise fur conservation which, in turn, is resulting in annually increasing benefits for participating Indians. Remarkable results have been achieved in these protected areas, particularly with muskrat and beaver.

An area of 425,000 acres in the district surrounding The Pas, Man., has been developed into a highly successful muskrat project. It was started about 1936 as a joint Dominion-Provincial scheme, and for the past seven years has been administered by the Province, subject to the recommendations of the Joint Dominion-Manitoba Fur Advisory Board.

Two beaver preserves in Ontario and five in Quebec, exclusively for Indians, are being administered by the Federal Government in co-operation with the provinces concerned. Two older preserves, on the Nottaway River and in the Abitibi district in the Province of Quebec, produced more than 1,000 beaver each in 1948, realizing an amount in excess of \$100,000 for the trappers.

Similar projects are progressing in Saskatchewan and Alberta. In addition to these community hunting preserves, Indian participation in individual registered trappings is proving an increasingly important factor in the rehabilitation of the hunting Indian. This system has been evolved because experience has shown that trapping under the former ordinary permit system led to recurring periods of depletion necessitating complete close seasons every few years.

Revolving Fund Loans.—Under an amendment to the Indian Act, passed in 1938, the Department may grant Revolving Fund Loans to Indian bands, groups, or individual Indians for the purchase of farm implements, machinery, live stock, fishing and hunting equipment, seed grain and materials to be used in native handicrafts. Such loans to individuals are not generally approved, however, and are considered only under exceptional circumstances. Money may be expended and loaned from the Revolving Fund Loan for the carrying out of co-operative projects on behalf of the Indians.

Treaties.—From their first contact with the Indians of North America, the British recognized an Indian title or interest in the soil, and considered such interest as one to be parted with or extinguished only by formal bilateral agreement. This was the beginning of the system of Indian treaties and surrenders which has been the fundamental basis of Indian policy, both in Canada and the United States. Only about one-half of the Canadian Indian population are actually adherents to formal treaties with the Dominion. The welfare of Indians not under treaties, however, receives no less attention from the Government on that account.

Economic Adjustment.—With the spread of settlement, the Indians entered a difficult transition period from their simple, primitive economy to a modern and rapidly changing life. Their economic adjustment problems vary greatly in different parts of the country, according to local conditions and opportunities and associations with the rest of the community. Originally, all Indians were hunters and the depletion of game following colonization, amounting to virtual disappearance of game and fur-bearing animals in many areas, played havoc with their native economy.

In the Prairie Provinces, the Government has followed a policy of agricultural and stock-raising education among the Indians, which has met with worthwhile success, considering the fact that these Indians had no previous agricultural experience.

After the disappearance of the buffalo in 1878, the prairie Indians were left destitute and had to be cared for. To-day, they are successful ranchers and grain-growers—a remarkable transition in a few generations.

On the Pacific Coast, the Indians have always been fishermen and seafarers and they have taken readily to the fishing industry in which to-day they are commercially efficient and prosperous. Many own boats and the shipshape and spick-

and-span fishing fleets of the west coast Indians are a tribute to their native industry. Indian women are preferred workers in the canneries where the patience and regularity of their operations is recognized as outstanding. In the settled areas of the eastern provinces, the Indians are engaged, mainly, in mixed farming. Some have been successful in specialized industrial pursuits.

For statistics of the agricultural and stock-raising activities, real estate and personal effects of the Indians, see the Annual Report of the Department of Mines and Resources.

¹ Includes income received from timber and mining dues, from annuities earned as interest on Indian trust funds, and from money received from land rentals.

Political Adjustment.—Aboriginal political organization among the Indians varied considerably in the different tribes and races. Usually it was very simple, involving only the recognition of a chief and headmen or councillors, either hereditary or chosen for their prowess or ability. Among some of the tribes, however, the clan and totem system gave effect to a fairly elaborate social structure. The nearest approach to established government was among the Iroquois, whose League of the Six Nations constituted an effective mutual aid pact, with quite modern

connotations. None of the aboriginal Indian tribal organizations are really adaptable to the economic and social life of the present era. Therefore, an effort has been made to introduce democratic, local self-government on Indian reserves. As early as 1869, election of Indian chiefs and councillors, corresponding roughly to the reeve and councillors of a rural municipality, was provided for in the Indian Act. Later, in 1884, what is known as the Indian Advancement Act was passed, providing a more elaborate system with greater powers for the more progressive bands. In both cases the elective system is applied by special Order in Council and only to those bands considered fitted for it. At the present time practically all the bands in Ontario, Quebec and the Maritime Provinces are under the elective system. In the West, with some exceptions, the Indians continue to follow their tribal methods. As settlement continues, however, and the Indians become more closely associated with the surrounding community, the application of the elective system among them will doubtless become more general.

Loyalty to the Crown is traditional and deep-rooted in Canadian Indians. In early wars they were indomitable and indispensable allies. In the two world wars of the present century, they volunteered readily and their enlistment figures ran into the thousands. They made good soldiers and won their share of commissions and decorations, and many graves on foreign battlegrounds testify to their devotion. The settlement of Canada has been largely free from Indian wars.

Under a section of the Veterans' Land Act, grants may be provided for Indian veterans who desire to settle on Indian reserves. These grants are paid over to the Indian Affairs Branch for control and management on behalf of Indian veterans. In addition, the services of the Branch and its agents are available to all Indian veterans needing advice and assistance in matters pertaining to any special re-establishment benefits to which they may be entitled as war veterans.

Indian Status.—Under the Indian Act, Indian status is acquired and retained in the male line and lost by departure therefrom. A White woman who marries an Indian becomes an Indian. An Indian woman who marries a non-Indian ceases, thereupon, to be of Indian status.

Legal Rights and Restrictions.—Apart from special provisions contained in the Indian Act, Indians are subject to the laws of the land in the same manner as all other people. It is a mistaken conception that Indians are "minors" under the law. Indians may independently and freely enter into contractual obligations, and they may sue and be sued. Indian real and personal property held on a reserve is exempt from taxation, and such property, except on suit by another Indian, is also exempt from seizure for debt or by hypothecation of any kind.

Indians habitually resident on a reserve or in receipt of annuities from the Government under Treaty are disenfranchised under the Dominion Elections Act, with the exception of veterans of the First and Second World Wars. Most of the provincial electoral laws, with some variations, have similar disqualifications of Indians. In municipal elections, reserve residence is not involved, and Indians are not disqualified.

Indians are disqualified under Dominion legislation from participation in the benefits provided by the Old Age Pensions Act and are thus contingently disqualified also from receiving pensions for the blind. On the other hand, Indians

INDIAN AGENCIES AND FUR-DEVELOPMENT PROJECTS IN CANADA, 1944

NOTE:

The numbered black dots designate the locations of Indian Agency Headquarters. These are located near to or on the Indian Reservations which they serve.

The Fur Development Projects are indicated by patterns and numbers. The names of the Projects and dates of Orders in Council or Agreements respecting them are given below.

FUR-DEVELOPMENT PROJECTS

1. INDIAN TRAPPING RESERVE April 21, 1928. Order in Council.
2. GRAND LEE VICTORIA TRAPPING RESERVE April 21, 1928. Order in Council.
3. OAP FACTORY BEAVER AND FUR PRESERVE January 26, 1942. Agreement.
4. PERRONVILLE BEAVER AND FUR PRESERVE June 25, 1940. Agreement.
5. NOTTAWAY BEAVER AND FUR PRESERVE June 15, 1938. Agreement.
6. ARTHUR BEAVER AND FUR PRESERVE February 23, 1942. Agreement.
7. KEGANAW BEAVER AND FUR PRESERVE October 22, 1941. Order in Council.
8. ALBERT BEAVER AND FUR PRESERVE February 23, 1943. Order in Council.
9. PARRIS BEAVER PRESERVE March 14, 1942. Trap-fur Purchase.
10. FERRIS BEAVER PRESERVE February 1, 1941. Agreement.
11. SUMMERBURY MOUNTAIN DEVELOPMENT February 1, 1941. Agreement.
12. BEAVER MOUNTAIN DEVELOPMENT 1936. Agreement.
13. RECOVERED TRAP LOTS (MONTANA) March 1945. Agreement.
14. FUR CONSERVATION DEVELOPMENT (Saskatchewan) July 18, 1940. Agreement.
15. RECOVERED TRAP LOTS (QUEBEC) 1945-46. Legislature of Province of Quebec.

Indications are that further agreements will soon be reached with the provinces of Ontario, Alberta and British Columbia.

receive full benefits under the Family Allowances Act. This divergent treatment of young and old Indians may be accounted for by the fact that family allowances are entirely a federal matter, whereas the old age pensions and pensions for the blind are paid on a joint arrangement between the Dominion and the provinces in which the Indians do not participate because they are regarded as the responsibility of the Dominion only.

From early times, the use of intoxicating liquor by Indians and the supplying of it to them has been prohibited under heavy penalties, as a protective measure. Another protective measure restricts trading with Indians on reserves and disposal by Indians of their property in certain areas.

Enfranchisement.—The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised, he ceases to be an Indian under the law and acquires the full rights and responsibilities of Canadian citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their Indian status, so that it is necessary to guard against premature enfranchisement.

Subsection 2.—The Eskimos of Canada

Information on the Eskimos of Canada will be found at p. 1133 of the 1946 edition of the Year Book.

Section 3.—Department of the Secretary of State*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official spokesman of the Government, as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Canadian Citizenship Act, the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act (1932), the Trading with the Enemy (Transitional Powers) Act, and with the collection and tabling of parliamentary returns. The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the 1945 Year Book, p. 475). Statistics regarding patents and copyrights appear at pp. 845-846 of this volume.

* Revised under the direction of the Under Secretary of State, Department of the Secretary of State.

Subsection 1.—Incorporation of Dominion Companies

Charters of Incorporation.—Statistics of companies incorporated under the Companies Act are given in Table 5.

5.—Numbers and Capitalizations of Companies Incorporated Under the Dominion Companies Act and Amendments, Years Ended Mar. 31, 1942-47

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-41 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

During the year ended Mar. 31, 1947, 150 Supplementary Letters Patent were granted for variation of corporate powers, changes of name, confirmation of compromises or arrangements with shareholders and for various other purposes. In addition to the companies with share capital, 35 corporations without share capital were granted Letters Patent under Part II of the Companies Act, 1934.

Subsection 2.—Citizenship

On Jan. 1, 1947, the Canadian Citizenship Act came into force. By this legislation all previous Naturalization Acts in force in Canada were repealed; this included the Canadian Nationals Act, R.S.C. 1927, c. 21. The purpose of the Citizenship Act is to give a clear and simple definition of Canadian citizenship and to provide an underlying community of status for all the people of Canada that will help to bind them together as Canadians. Heretofore, the only definition of Canadian citizenship was to be found in the Immigration Act, and that was a limited one, for it defined citizenship for purposes of immigration only.

Natural-Born Canadian Citizens.—The Canadian Citizenship Act, 1947, defines clearly the status of natural-born Canadians before and after the coming into force of the Act. It covers those persons born in and outside Canada. Provision is also made for the citizenship of a Canadian-born person born abroad, out of wedlock. Such a person is a Canadian citizen if his mother was born in Canada, or on a Canadian ship, and had not become an alien. Heretofore, a person in that category had no claim to Canadian citizenship. A person born abroad of a Canadian parent before the commencement of the Canadian Citizenship Act, 1947, is not deemed to have the status of a Canadian citizen, unless he has been lawfully admitted to Canada for permanent residence, or is a minor. A person born abroad of a Canadian parent after the new Act came into force is a Canadian citizen, but

there is a proviso that his birth must be registered at a Canadian consulate, or with the Secretary of State of Canada, within two years after its occurrence, or within such extended period as may be authorized in special cases by the Minister, if his parents wish him to retain Canadian citizenship. In addition, a Canadian born outside Canada, either before or after the commencement of this Act, ceases to be a Canadian citizen unless, within one year after he reaches the age of 21, he files a declaration of retention of Canadian citizenship and, if he is also a citizen of a country other than Canada (dual nationality), he divests himself of such nationality by declaration of alienage, or otherwise. In special cases, the Minister may extend the time during which any such person may assert his Canadian citizenship and divest himself of other nationality or citizenship. One of the important features of the new Act is that it permits a natural-born Canadian citizen to apply for a certificate of Canadian citizenship. Previously, birth certificates were deemed sufficient evidence of status. Any Canadian may now apply to the Secretary of State of Canada for a certificate and obtain it upon payment of \$1.

**CITIZENSHIP CERTIFICATES GRANTED TO CANADIAN-BORN
AND OTHER BRITISH-BORN CITIZENS, 1947 AND 1948**

		1947	1948

Sect. 11 (c) ⁶	Persons naturalized in Canada before the Act of 1914.....	1,789	1,847

¹ (a) Canadians by birth mean natural born Canadian citizens; (b) Canadians by naturalization mean persons who were naturalized in Canada between Jan. 1, 1915 and Dec. 31, 1946; (c) Canadians by marriage mean wives who automatically acquired British nationality through their husbands prior to Jan. 1, 1947, and were thus automatically Canadian citizens on that date; (d) Canadians by residence mean British subjects who had a residence of 5 years in Canada prior to Jan. 1, 1947, and thus became automatically Canadian citizens.

² British subjects in the classes entitled to become Canadians as defined in this Section and subsection. ³ Minors whose responsible parents had been granted certificates of citizenship under the Canadian Citizenship Act. ⁴ Persons with respect to whose status as Canadian citizens there was a doubt. ⁵ Certificates granted to minors in special cases other than Sect. 10 (3).

⁶ Persons who were naturalized locally in Canada before the date of the coming into force of the Naturalization Act, 1914.

British Subjects and Canadian Citizens.—British subjects, as distinct from Canadian citizens, have their status defined under the new Act. It should be explained that, under previous Acts, persons born or naturalized within the British Commonwealth of Nations were officially designated as British subjects. Officially, a Canadian could not describe himself as a Canadian citizen; the term was 'British subject'. This was one of the principal reasons why the Act was passed, viz., to permit a Canadian to call himself a *Canadian*. The authority for this procedure is found in Sect. 3 of the new Act, which reads:—

"Where a person is required to state or declare his national status, any person who is a Canadian citizen under this Act shall state or declare himself to be a Canadian citizen and his statement or declaration to that effect shall be a good and sufficient compliance with such requirement."

Although the designation 'British subject' will be dropped in future insofar as it applies to Canadians, this does not mean that a Canadian loses the status of a British subject. Sect. 26 of the new Act reads that a Canadian citizen is a British

subject, and Sect. 28 reads that a person who has acquired the status of a British subject by birth or naturalization under the laws of any country of the British Commonwealth, other than Canada, to which he was subject at the time of his birth or naturalization, shall be recognized in Canada as a British subject.

It should be emphasized that the rights of non-Canadian British subjects have not been changed or infringed upon by the new Act. They will continue to have the right to vote, to obtain old age pensions, and the right of permanent entry after five years' residence in Canada. But they are not Canadian citizens until they have established a residence of five years in Canada. Those who have that residence at the commencement of the Act are Canadian citizens, and those who attain it after that date must apply for certificates of citizenship before being granted the status of Canadian citizens.

However, any British subject, whether or not he is a Canadian citizen, may apply for a certificate of citizenship. The British subject who is not a Canadian citizen may apply for a certificate direct to the Secretary of State of Canada or, alternatively, he may apply to the court of the district in which he resides. If the Secretary of State is in any doubt as to the qualifications of the person who applies direct to him, he may refer the case to the court for consideration.

Canadian Citizens Other Than Natural-Born.—Under Sect. 9 of the Act, naturalized persons and British subjects who had Canadian domicile before the passing of this Act, are Canadian citizens and may obtain a Canadian Citizenship Certificate upon payment of \$1. Sect. 9 also defines the status (as Canadian citizens) of women and children, other than natural-born, and the conditions under which they qualify for Canadian citizenship.

Status and Procedure of Non-Canadians to Canadian Citizenship.—In Sect. 10 (1) of the Act will be found the provisions which apply to the granting of citizenship to a person who is not a Canadian citizen. Although the word 'alien' is not used in the subsection, nevertheless its principal purpose is to define the circumstances under which an alien may apply for and be granted a certificate of citizenship. The application is made to a court and, whereas the alien *must* apply to the court, the British subject has the option of applying to the court or direct to the Secretary of State. Furthermore, the alien must commence his application by filing a Declaration of Intention, which the British subject is not required to do.

The applicant for a certificate of citizenship may file his application at any time after his admission to Canada, and after he has attained the age of 18 years, in the form of a Declaration of Intention in the office of the clerk of the court of the district in which he resides. He must then wait not less than one year before filing with the court his application for a decision that he is qualified for citizenship. In any case, when he files his final application, he must satisfy the court that he has had a residence of one year in Canada immediately prior to the date of filing the application, and a further period of four years in Canada during the six years immediately preceding the date of the application, making a total residence of five years. In the case of an applicant who has served outside of Canada in the Armed Forces of Canada during time of war, or where the applicant is the wife of, and resides in Canada with, a Canadian citizen, a residence of only one year immediately preceding the date of the application is required.

In addition to the requirements of residence the applicant must satisfy the judge that he has been lawfully admitted to Canada for permanent residence; that he is of good character; that he has an adequate knowledge of English or French (knowledge of language is not necessary if he has resided continuously in Canada for more than 20 years—the 20-year clause is new); that he has an adequate knowledge of the responsibilities of Canadian citizenship; and that he intends, if his application is granted, either to reside permanently in Canada or to enter or continue in the public service of Canada or of a province thereof.

When the judge has given his decision, the papers and the decision are forwarded to the Secretary of State of Canada. He may grant the certificate of citizenship or, if he is in doubt whether the certificate should be granted, refer the application to the court for a rehearing. When a certificate is granted, it is forwarded to the clerk of the court, who then notifies the applicant to appear in court for the purpose of taking the oath of allegiance and declaration of renunciation of foreign allegiance and receiving his certificate of citizenship.

Status of Married Women.—One of the important changes in the new Act is the citizenship emancipation of married women. Hitherto, an alien woman marrying a British subject became a British subject. Contrariwise, the woman of British nationality who married an alien and acquired his nationality upon marriage ceased to be a British subject. In fact, prior to 1932, a woman of British nationality who married an alien lost British nationality regardless of whether or not she acquired

her husband's nationality. Under the new law, all this is changed. A Canadian woman does not lose Canadian citizenship upon marriage to an alien, and an alien woman who marries a Canadian does not, by reason of the marriage, become a Canadian citizen. In the former case, if she has acquired her husband's nationality, the married woman may divest herself of Canadian citizenship by filing with the Secretary of State of Canada a declaration of alienage and she shall thereupon cease to be a Canadian citizen. In the latter case, an alien woman must apply to the court for a certificate of citizenship. The only concession is that a residence of only one year in Canada is required.

In the past, married women were classed with minors, lunatics, and idiots as persons under disability. They could not become naturalized or control their national status as independent persons, except in very special circumstances. These disabilities have been removed and under the new Act married women have equal status with men.

Status of Minors, Foundlings, Posthumous Births, etc.—Under Sect. 10 (3) of the Act, a certificate of citizenship may be granted to a minor child of a person to whom a certificate of citizenship is, or has been, granted under the Act, on the application of that person if the person is the responsible parent of the child, if the child was born before the date of the grant of the certificate and has been lawfully admitted to Canada for permanent residence. Under Sect. 11 (b), the Secretary of State may, in his discretion, grant a certificate to a minor in any special case whether or not the conditions of the Act have been complied with. For the first time, a Canadian Act on nationality or citizenship defines the status of a deserted infant. Under previous Acts there was no mention of the status of a child left on somebody's doorstep. Under the new Act, it is provided that every foundling, who is or was first found as a deserted infant in Canada, shall, until the contrary is proved, be deemed to have been born in Canada. Another new provision in the Act, which did not appear in previous Acts, is the case of a child born after the death of his father. For purposes of definition of natural-born Canadian citizen, the child shall be deemed to have been born immediately before the death of the father. Under Sect. 11 (a) of the Act, a certificate may be granted for the purpose of removing any doubts as to whether the person to whom it is granted is a Canadian citizen, and it is specifically provided that the granting of the certificate shall not be deemed to establish that the person to whom it is granted was not previously a Canadian citizen.

Citizenship of Persons Naturalized Locally Prior to 1914.—Persons who were naturalized locally in Canada prior to the passing of the Naturalization Act of 1914, were permitted, under the various Imperial Acts which were in force from 1914 to 1946, to exchange their local naturalization for Imperial certificates. This provision has been carried forward in the Canadian Citizenship Act, so that these persons, and particularly their children who were naturalized with them but who have no certificates to identify them as citizens, may apply for and obtain certificates of Canadian citizenship upon payment of a fee of \$1.

Protection of Status Prior to the Canadian Citizenship Act.—Sect. 46 of the Act provides that, notwithstanding the repeal of the Naturalization Act and the Canadian Nationals Act, the Canadian Citizenship Act is not to be construed

or interpreted as depriving any person who is a Canadian national, a British subject or an alien as defined in the said Acts, or in any other law in force in Canada, of the national status he possesses at the time of the coming into force of this Act.

Loss of Canadian Citizenship.—A Canadian citizen who, when outside of Canada and not under a disability, by any voluntary and formal act, other than marriage, acquires the nationality or citizenship of a country, other than Canada, shall cease to be a Canadian citizen. This is the usual way in which Canadian citizenship is lost. There are other causes, such as service in the Armed Forces of a country when it is at war with Canada; a minor child who acquires a foreign citizenship with his responsible parent; or a woman who acquires her alien husband's nationality and files a declaration of alienage. The minor child who loses Canadian citizenship through his parent may, within one year of reaching the age of 21, file a declaration of retention of Canadian citizenship, and he shall thereupon again become a Canadian citizen.

A Canadian citizen, other than natural-born or one who has served in the Armed Forces of Canada in time of war, ceases to be a Canadian citizen after a residence of at least six consecutive years outside Canada, except in specific cases wherein the principle of maintenance of some connection with Canada is proved. There is authority, however, to extend the period of residence outside Canada for more than six years, by registration with a consulate and the issue of a certificate of extension.

Revocation of Citizenship.—The revocation procedure which obtained under the Naturalization Act has been carried forward into the new Act. This provides for the establishment of a revocation commission to inquire into and report upon the proposed revocation of certificates of citizenship. Revocation can take place only by order of the Governor in Council, upon recommendation of the Secretary of State. Revocation proceedings may be instituted on the grounds of residence outside of Canada for not less than six years; trading with the enemy during time of war; false representation or fraud, or the concealment of material circumstances at the time of naturalization; disaffection or disloyalty to His Majesty, while out of Canada or, if in Canada, the naturalized citizen has been convicted of treason or sedition by a competent court.

Where a person ceases to be a Canadian citizen or a British subject under the circumstances outlined in the preceding paragraph, the citizenship of the spouse and minor children of that person shall not be affected unless, in the case of a wife, she became a British subject (legislation prior to this Act), by reason only of her marriage to the said person, or the said person is the responsible parent of a child. In such case it may be directed that the wife and children shall cease to be Canadian citizens or British subjects, as the case may be. The wife of a person who has ceased to be a Canadian citizen or a British subject may, within six months of the date of revocation of her husband's certificate, make a declaration renouncing her Canadian citizenship and thereupon any minor children of her husband and herself shall cease to be Canadian citizens or British subjects, as the case may be.

Where a person ceases to be a Canadian citizen or a British subject, he shall be regarded as having the nationality or citizenship which he had before he became a Canadian citizen or a British subject.

The Oath of Allegiance.—In conformity with the new conception of Canadian citizenship as defined in the Act, the form of oath of allegiance has been changed. Under the Naturalization Act it read as follows:—

“I (AB) swear by Almighty God that I will be faithful and bear true allegiance to His Majesty King George the Sixth, his Heirs and Successors, according to law. So help me God.”

Under the new Act, the oath has been altered to read:—

“I (AB) swear that I will be faithful and bear true allegiance to His Majesty King George the Sixth, his Heirs and Successors, according to law, and that I will faithfully observe the laws of Canada and fulfil my duties as a Canadian citizen. So help me God.”

Canadian Citizenship Ceremonies.—Of the innovations in the new Act the ceremonies attendant upon the presentation of certificates of citizenship at special sittings of the courts are significant. Machinery has been set up by which the courts across the country will be given every assistance possible in the arrangement of ceremonies in connection with the presentation of certificates of citizenship.

It is planned, also, to provide the newcomer to Canada with special facilities for training and education in the fundamentals of citizenship and a manual on Canadian citizenship will be issued to the alien when he files his Declaration of Intention.

Section 4.—The Civil Service of Canada*

In the largest sense the Dominion Civil Service comprises all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various Departments, Commissions, Boards, Bureaus, and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service, and personnel are further differentiated in terms of the several authorities under which they derive their appointments. Some few are appointed by either or both Houses of Parliament directly, a considerable number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission.

As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the “merit principle” in respect to both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918. Successive Royal Commissions deliberated on the problem of creating an effective and efficient working force and from their findings and recommendations emerged the concept of a quasi-judicial body, with a large measure of autonomy and with jurisdiction over nearly the whole of the public service.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examinations. In the past 29 years more than 1,000,000 applicants for Civil Service posts have been examined by the Commission. Examinations are held periodically as the staff requirements of the public service dictate. Positions located throughout the country are treated in this respect in the same manner as

* Revised by the Secretary of the Civil Service Commission, except where otherwise indicated.

positions at Ottawa, but applicants for local positions must be bona fide residents of the locality in each case, whereas any Canadian citizen is entitled to apply for positions open at Ottawa. Competitive examinations are announced through posters displayed on the public notice boards of post offices, offices of the National Employment Service, public libraries and elsewhere.

The relative capacities of applicants are measured by objective tests designed and administered by the Commission. The nature of the test varies with the class of position and it may be of the written or oral type, or a combination of the two. For certain classes of positions ratings are based entirely on the education and experience of applicants as given on their application forms.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on "eligible lists". Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. As required, appointments are made from eligible lists, which remain valid for one year.

The statutory veterans' preference which had existed for veterans of the First World War was extended to the new veterans and it has proved to be a major factor in occupational rehabilitation. During 1947, approximately 75 p.c. of all male appointees to Civil Service posts across the country were veterans.

Position-Classification and Compensation.—Provision was made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification accordingly was instituted in 1919 and all positions with like duties and responsibilities were classified alike and remunerated equally. Through the years the original classification has been extensively revised, many new classes added and others discontinued as the administrative programs and practices of Government Departments have evolved. The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position-classification is the mainspring in the Commission's primary function of recruitment, involving, as it does, the fixing of standards of qualification for each class of position.

Salaries and appointments were controlled during the Second World War by a special set of regulations authorized by various Orders in Council, chiefly P.C. 1/1569 and 32/1905 of Apr. 19 and May 10, 1940. Since the end of the Second World War, salary controls have been progressively relaxed and the Commission has recommended upward revisions in salary for certain general classes and for particular positions the duties of which had substantially increased during the preceding six years.

Organization and Methods.—Under the terms of the statute the Commission is made responsible for investigating and reporting to the Governor in Council on all matters affecting the organization of departments. In this respect the Commission acts as agent for the executive arm of Government which maintains a constant check on the growth of establishments. In addition to the annual scrutiny of estimates by Parliament, Departments are required to submit for approval all projected staff increases before engaging additional personnel and, under established financial practice, authority to release the funds required to meet such commitments is retained by the Governor in Council. Since the administrative machinery must frequently be adjusted, quantitatively and qualitatively, to meet changing conditions, the Commission is continuously engaged in the study of staffing problems throughout the public service.

In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. The Commission has accordingly sought to give constructive guidance to Departments in respect to matters of organization, systems and methods. In 1948 steps were taken to develop an Organization and Methods Division exclusively for the study of problems of this kind in collaboration with officials directly responsible for major areas of administration. The range and complexity of the activities of present-day government are too generally recognized to require emphasis and, in these circumstances, the development of a specialized service directed at increasing the efficiency of the operating machinery of the public service is a significant event.

Staff Training.—Systematic in-service training of departmental staffs aimed at increasing the general efficiency of the Civil Service is a comparatively recent development in the field of personnel management. The first series of courses for supervisors was introduced in 1944 in collaboration with the Canadian Vocational Training Division of the Department of Labour. This joint arrangement was continued with most satisfactory results until early in 1947, when it was decided to create a Staff Training Division within the Civil Service Commission. Parallel Training Divisions are being established in the majority of Departments. A broadly based training program is envisioned and courses designed to meet specific training needs are being rapidly developed. The leader-conference method has been adopted as most effective for this purpose, and visual aids including sound films are used extensively. The key to efficiency in administration is the development of supervisory personnel in their relationships with staff in terms of instruction, direction and discipline. Supervisory training has, therefore, been the first aim of the program. During 1947 orientation or induction training was introduced to aid the new employee in making the adjustment to public service employment and quickly identifying himself with the objectives of the unit to which he is appointed. Wide publicity throughout the public service has been given to courses on the secondary school and university levels that are available through night school, or by correspondence, from local and national educational institutions, and civil servants are being encouraged to use these means to improve their academic standing and technical skills.

Promotions.—Promotions among the personnel of Departments are made through competitive examinations which are held as vacancies occur. It is a prime object of the Civil Service Act to create a career service and the system of position-classification is particularly suitable to the advancement of employees by promotion. Promotions, however, are limited by law to the ranks of the permanent Civil Service, which at present is a small proportion of the total. The preponderance of temporary staff is a legacy of the Second World War period when few permanent appointments were made. This condition is gradually being changed as wartime units are liquidated and the structure of post-war administration emerges.

Civil Service Statistics.*—Since April, 1924, a monthly return of personnel and salaries has been made by each Department of the Government to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years following 1912.

* Revised in the Public Finance Division, Dominion Bureau of Statistics.

From 1914 to 1920, the number of employees increased very rapidly as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board, were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,739.

Between March, 1939, and March, 1947, there was an increase of 79,231 in the total number of permanent and temporary employees. The bulk of this wartime increase was accounted for as follows: Department of National Defence, 21.8 p.c.; new wartime Departments and Boards (Reconstruction and Supply, National Film Board, Canadian Information Service, Wartime Prices and Trade Board), 7.6 p.c.; Unemployment Insurance Commission, 10.7 p.c.; and 23.6 p.c. in Veterans Affairs and Soldier Settlement and Veterans' Land Act Departments combined.

Despite the large wartime increase in the total Civil Service employment, the number of permanent employees was less in March, 1947, than in March, 1939. The number of temporary employees, however, increased steadily during the war years. Consequently, in March, 1947, temporary employees represented 76.2 p.c. of the total as compared with 30.3 p.c. of the total in March, 1939, and 34.5 p.c. of the total in March, 1925, the first year for which these statistics were published.

The following sequence of tables is condensed from a recently published historical series covering the years 1937 to 1947. Table 9 gives the total numbers and percentages of permanent and temporary Civil Service employees in the month of March over the period. Table 10 gives comparable information regarding salaries and wages paid during each of the fiscal years of the period. Tables 11 and 12 give parallel data to those shown in Tables 9 and 10 but limited to the permanent and temporary employees employed at departmental headquarters. Tables 13 and 14 give index numbers of permanent and temporary employees and of wages paid to them for the same years of the series. Table 15 gives detailed information of employees and expenditures by Departments and Branches for the months of March, 1946 and 1947..

9.—Numbers and Percentages of Permanent and Temporary Civil Service Employees, Months of March, 1937-47

NOTE.—Figures for the years 1925-36 will be found at p. 1141 of the 1946 Year Book.

Section 5.—Supervision of Race-Track Betting

The supervision of race-track betting, under the pari-mutuel system, has been under the jurisdiction of the Minister of Agriculture since it first operated during the racing season of 1921. The actual supervision is carried out by officers of the Royal Canadian Mounted Police. During the war years the statistics under this heading were dropped from the Year Book. Those last published were for the years 1930-39 and were given at p. 965 of the 1941 edition. The following table links in with the 1941 Year Book and brings the data on a comparable basis up to the year 1946.

16.—Race-Track Betting in Canada, Years Ended Mar. 31, 1939-46, and by Provinces, 1946

NOTE.—Figures for the years 1924-38 are given at p. 1076 of the 1940 Year Book.

CHAPTER XXXI.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA

CONSPECTUS

	PAGE		PAGE
SECTION 1. SOURCES OF DOMINION GENERAL INFORMATION.....	1194	SECTION 3. ACTS ADMINISTERED BY DO- MINION DEPARTMENTS.....	1219
SECTION 2. DIRECTORY OF SOURCES OF OFFICIAL INFORMATION FOR ALL DEPARTMENTS (DOMINION AND PRO- VINCIAL).....	1198	SECTION 4. DOMINION AND PROVINCIAL ROYAL COMMISSIONS.....	1222

Section 1.—Sources of Dominion General Information

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds—Dominion and Provincial—is centralized. In regard to information that is not mainly statistical the individual Departments concerned with the particular subject, as indicated in the Directory, Section 2 of this Chapter, should be approached. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are the Information Division, Department of External Affairs which deals with questions about External Affairs originating in Canada and with general requests, originating abroad, for information on Canada and Canadian affairs; the Trade Publicity Division, Department of Trade and Commerce; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture and Mines and Resources, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, and several other Departments have Publicity Branches or Public Relations Divisions.

All Government Departments, with few exceptions, issue their own lists of reports and publications. They must, according to statute, publish Annual Reports which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, the descriptions given below are limited to the five special publicity services specified in the first paragraph above. Section 2, on the other hand, has been prepared with the purpose of presenting to the reader a Directory of all sources of information, Dominion and Provincial. The purpose is to direct the reader who is not in touch with governmental organization to the proper channels from which he can draw material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).* The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian

* This statute, consolidated as the Statistics Act (R.S.C., 1927, c. 190) was repealed and replaced by the Statistics Act, 11-12 Geo. VI, c. 45.

statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this Report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

The chief aims of the Bureau of Statistics are:—

- (1) To furnish factual data for administration and government.
- (2) To assist in developing Canada as a well-informed nation by standing ready to help business men and individuals to plan their enterprises and their lives.

It is in regard to the second of these aims that this review is concerned.

Inquiries.—Literally, hundreds of individual requests for specific information are received in the Bureau each day, routed through the main Divisions and answered as expeditiously as possible. Since the field of effort covers, from the statistical side, all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. This will be emphasized from a glance at the Directory following. Nevertheless, it is only in regard to statistical questions that inquiries should be directed to this Bureau.

Publications.—The Dominion Bureau of Statistics is the largest publishing department of the Federal Government: the subjects of its reports cover all phases of the national economy. Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own offset printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and press-work only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of \$30 per year entitles the subscriber to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups such as:—

- | | | |
|----------------------------|-------------------------------|--------------------------------|
| 1. Administration | 6. Industrial Production | 10. Transportation, Commu- |
| 2. Agricultural Production | 7. Labour and Prices, Unem- | nications and Public |
| 3. Economic and Business | ployment and Earnings | Utilities |
| Conditions | 8. Population | 11. Vital Statistics, Criminal |
| 4. Education | 9. Trade, Domestic (including | Statistics, and Welfare |
| 5. Finance | Merchandising) and Foreign | Institutions |

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada, Ottawa.

Information Division, Department of External Affairs.—The task of this agency is to make Canada better known abroad and to encourage interest in and understanding of international affairs within Canada.

The Division prepares for Canadian missions abroad—Embassies, Legations, Consulates and Trade Commissioners' Offices—a regular supply of information material on developments in Canada. Reference papers, booklets, features, photo-

graphs, posters and other graphic material dealing with Canada thus are distributed throughout the world. Information Officers are attached to the staff of Canadian missions at New York, London, Washington, Paris and Canberra.

The Division maintains an Enquiries Section at Ottawa to deal with questions about Canada received from abroad and questions on international affairs received from within Canada. The Division offers special facilities to journalists, writers and commentators visiting Canada, and for Canadian speakers abroad. It supervises the Department's library and takes a special interest in Canada's cultural relations abroad.

Domestically, the Division is responsible for departmental press conferences, press releases, handling of press inquiries and for the provision of information relating to external affairs and the work of the Department. It also co-ordinates the activities of all Canadian Government agencies engaged in and interested in disseminating Canadian information abroad. It is normally responsible for Canadian information arrangements at international conferences both in Canada and elsewhere.

Trade Publicity Division, Department of Trade and Commerce.—This Division works through the Trade Commissioner Service along parallel lines to the Information Division of the Department of External Affairs, except that its field is not so broad and it specializes on trade information, although it also features material of a general nature. Again, it distributes information outside Canada through Trade Commissioners and within the Dominion among business men, commercial agencies and the public generally. Its chief organ is *Foreign Trade* which is published weekly.

Canadian Broadcasting Corporation.—Since radio broadcasting was made possible by progress in the field of wireless telegraphy following the First World War, this medium has become a rival means of giving information to the public along with newspapers, films and other means of communication. This is true in all countries whether, as in the United States, the systems are privately owned or whether, as in Canada and the United Kingdom, they are organized on a national basis.

The Canadian Broadcasting Corporation, since its establishment in 1936, has indeed become one of the most effective channels through which information, official and unofficial, is broadcast to the Canadian people. Because of the widely distributed population, especially of the sparsely peopled areas of the northwest and the far north, radio is relatively more important to Canada than to any other people. Without it the country could not be so effectively linked as it is, for to-day the posts of the far north can receive their news and enjoy the entertainments that the radio provides equally with their fellow citizens living at Halifax, N.S., Montreal, Que., or Vancouver, B.C.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. They include news, drama, informative talks, children's programs, religious programs, school broadcasts, public service broadcasts, sports, women's activities, etc.

An important development brought about by the War is the rebroadcasting to Canadian listeners of world news broadcast from international centres and picked up by the CBC short-wave receiving stations. Thus it is that CBC is taking its rightful place among the official sources of information available to Canadians.

Through the International Shortwave Service operated by the CBC, programs are broadcast daily in ten languages: English, French, Czech, Dutch, Danish, Norwegian, Swedish, German, Spanish and Portuguese. The transmitters are located at Sackville, N.B., and the programs are beamed to Europe, the West Indies, Central and South America. By this Service, information on life in Canada and on economic conditions is broadcast abroad as part of the general information plan for promoting a better understanding of Canada in other countries.

National Film Board.—The Canadian Government, through the National Film Board, produces films, filmstrips, photographs, photo displays, posters, wall-hangers, booklets and other graphic material for distribution in Canada and abroad.

The Board is made up of two Ministers of the Federal Government, three senior Civil Servants, and three members of the public chosen for their interest in film and knowledge of its importance as an instrument of public policy. The chief executive officer is the Film Commissioner, whose responsibility it is to direct, advise upon and co-ordinate Government film services in Canada. Besides its own considerable production program of informative films and graphic materials, the Board is also the production and distribution agency for films for all Departments of the Government.

The Board produces one or more monthly theatrical releases in English and French for distribution to theatres throughout Canada. An extensive non-theatrical distribution is maintained through the medium of rural circuits operating in every province, and through film libraries in over 200 urban centres. To service the field, regional offices are maintained in every province.

Newsreel stories dealing with many aspects of Canadian life are also produced by the Board and are distributed throughout the world by the principal newsreel companies at New York, U.S.A., and London, England. The National Film Board's technicians keep abreast of recent developments in colour production, stereoscopic films and television. Many Canadian films are featured on television programs in the United States and the United Kingdom.

The Board's films and other productions are widely distributed in the United States, the United Kingdom, Australia, Central and South America and other countries through the Board's offices at New York, Chicago and Washington in the United States; Mexico City, Mexico; Sydney, Australia; and London, England; and through Canadian trade and diplomatic offices. Other distribution channels are through commercial theatres and Government and other non-theatre film circuits. In all, distribution of the Board's productions was carried out in fifty countries during 1947.

The Board's films and photographs have helped to clarify Canada's position in the international scene at such world gatherings as the Food and Agriculture Organization Conference at Quebec, the San Francisco Conference, the International Labour Organization Conference at Philadelphia, the UNRRA Conference at Montreal, the Quebec Conferences, the UNESCO Conference at Paris and the United Nations gatherings at New York.

In addition to films and other graphic materials produced in the English and French languages, the Board has produced or secured the production of Canadian films in French for distribution in France and her colonies; in Spanish for Latin America; in Portuguese for Brazil, Portugal, Portuguese West Africa and Portuguese Guinea; in Danish and Swedish for Scandinavia, Greenland and Iceland; in Dutch for the Netherlands, Indonesia and the Netherlands Antilles; in German for Switzerland, Austria and the British and American occupied zones of Germany; in Russian and Ukrainian for the U.S.S.R.; in Turkish for Turkey; and in Arabic for Egypt, Tripolitania, Cyrenaica, Lebanon, Syria and Iraq.

The Distribution Division at Ottawa directs the flow of all N.F.B. films through National Film Board offices at London, England; New York and Chicago in the United States; Mexico City, Mexico; through Canadian Embassies, Legations, Trade Commissions, and Information Offices in other countries; and through professional theatrical and non-theatrical distributors within all these territories.

The Board maintains a photographic library of more than 85,000 negatives covering many aspects of Canada, its landscape, resources, industries, agriculture, and the national life and character of the Canadian people. Its photographs are distributed to Government Departments, tourist bureaus, newspapers, magazines and publishing houses within Canada and to Trade Commissioners and other representatives abroad who may request them.

Section 2.—Directory of Sources of Official Information for All Departments (Dominion and Provincial)

Prior to the publication of the 1947 edition of the Year Book, this Chapter on Sources of Official Information was taken up mainly by detailed lists of publications issued by the Federal Government Departments and the Provincial Government Departments. Such lists as these were of value to readers since the Year Book was the only place where publications of this kind were brought together. The rapid increase in the number of printed reports, bulletins and maps that has characterized all publicity efforts in recent years has made it difficult to spare the space in the Year Book to carry such detailed listings.

Moreover, since the Year Book lists were prepared and published on a departmental basis, they became less and less convenient to the reader as the lists increased in length. For instance, several Departments issued reports that could be classified under the broad heading of Agriculture—among these were the Department of Agriculture, the Dominion Bureau of Statistics and the National Research Council, not to mention the Northwest Territories and Yukon Administration.

Without a subject cross-index, it was very difficult for the reader, unless he worked carefully through the individual lists (which required much time and labour), to know just where to go for information he desired under a particular subject heading. Again, the space that could be spared for individual lists did not admit of setting out the material in easily readable form. The size of type as set up in earlier editions was much too small for convenient reading and revisions could be made only once a year at best although, as a rule, such lists were subject to very frequent change.

The King's Printer, Ottawa, now publishes an Official List of all Government publications printed from type. This list, which may be obtained free of charge, is revised at regular intervals and is classified on a subject basis, as well as being adequately cross-referenced. Moreover, most Federal and Provincial Departments that put out near-print publications (either in mimeographed or rotaprinted form) issue lists of these free to the public and very often such lists include the printed publications published by the same Departments, and available through the King's Printer. Such individual lists are far more up to date and are listed and classified for more convenient reference than space in the Year Book will allow.

Apart from the question of publications, however, there is a growing volume of inquiries received from the public relative to all manner of subjects. This also made it desirable to devise some means of guiding the public to the source of information on specific matters. Very few people are acquainted with internal government organization and it is not surprising that inquiries have very often to be routed and rerouted several times before they get to their intended destination.

For these reasons, this Chapter of the Year Book was reconstructed to serve as a Directory by means of which the reader would be led to the basic sources of information in a particular field. Since the organization of government departments is never static, the following subject analysis of federal and provincial sources of information has been brought up to date.

To make best use of this Directory, it is necessary that the reader understand broadly the differences in function between Federal and Provincial Departments and their separate fields of work. For instance, the inquirer who seeks information on forestry may direct his correspondence to either the Dominion Forest Service or the Dominion Bureau of Statistics on the one hand, or to one or all of the Provincial Departments administering the forest resources of the provinces on the other.

Certain fields of effort, such as Trade and Commerce, Customs and Excise, Currency and Banking, Navigation, Transportation, Radio, Census of Population, National Defence etc., are constitutionally federal matters and in such fields the respective Departments at Ottawa are the proper sources with which to communicate. While other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces under the British North America Act, certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case with the Dominion Bureau of Statistics, in co-ordinating and presenting the picture for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources in the provinces should be forwarded to the particular provinces concerned. The Federal Government, while not administering provincial resources, co-operates closely with the provinces and is in a position to furnish over-all material for Canada, especially production data, on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and crop yields are cases in point—in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Where inquiries are directed to Federal sources, they should, as a general rule, be sent to the individual Departments listed in the Directory for information not of a statistical nature but, whatever the subject, where the information required is clearly statistical, they should be addressed to the Dominion Bureau of Statistics.

Bearing these points in mind, the reader will be able to apply the information given in the Directory to best advantage.

In the Directory, symbols are set against individual sources of information to give special information such as availability of detailed lists of publications, the costs of such lists (in cases where a charge is made), or information of other kinds. All Departments whether federal or provincial are prepared to furnish, by letter or otherwise, information in their respective fields, free of charge, although where special compilations are called for, a nominal charge is sometimes made.

The address for all Federal Departments is Ottawa, Ontario. Inquiries forwarded to Provincial Government Departments should be addressed to the provincial capitals concerned:—

Prince Edward Island.....	Charlottetown
Nova Scotia.....	Halifax
New Brunswick.....	Fredericton
Quebec.....	Quebec
Ontario.....	Toronto
Manitoba.....	Winnipeg
Saskatchewan.....	Regina
Alberta.....	Edmonton
British Columbia.....	Victoria

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

▲ Most publications of Federal Departments printed from type are purchasable from the King's Printer who publishes a current list. Photographs, films and displays may be purchased from the National Film Board at prices obtainable on application. Most Provincial Government printed publications may be obtained from the King's Printers of the provinces. For addresses of Provincial Governments see text immediately preceding this Directory.

- Near-printed and mimeographed reports free or purchasable from this Department or Branch; particulars on application.
- Directory of Departmental Organizations and Activities available from the Federal or Provincial Department on request.
- List of Publications available free of charge on request from Federal or Provincial Departments concerned. (In the case of the Labour Department a list of publications is given in the *Labour Gazette*.)

Section 2.—Dominion Legislation, 1947

Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947

NOTE.—This classified list of Dominion Legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes themselves. Adequate references are given in this summary.

Chapter and Date of Assent	Synopsis
11 George VI.	
Agriculture—	
3 Mar. 28	<i>An Act to Amend the Canada Grain Act</i> (c. 5, 1930 and amendments). The amendments under this Act are concerned mainly with: (1) the extension of time allowed between weigh-overs in elevators and (2) the provision for full insurance of grain stored against fire and explosion.
10 May 14	<i>The Agricultural Products Act</i> authorizes the continuance of agreements made for the sale and export of agricultural products to distressed countries for the relief of suffering.
15 May 14	<i>An Act to Amend the Canadian Wheat Board Act, 1935</i> (c. 53, 1935 and amendments). The amendment authorizes the Canadian Wheat Board to continue as the sole wheat buying and selling agency until 1950, for the requirements of the wheat contract with the United Kingdom; and makes provision for other matters affecting the operations of the Board. The <i>National Emergency Transitional Powers Act, 1945</i> , regulations as expedient to the Board are to be in force until the end of the present crop year.
34 June 27	<i>An Act to Amend the Farm Improvement Loans Act, 1944</i> (c. 41, 1944-45). The amendment makes provision for the inclusion of poultry in the definition of live stock as contained in the Act.
43 June 27	<i>An Act to Amend the Prairie Farm Assistance Act, 1939</i> (c. 50, 1939 and amendments). This amendment provides for an increase per acre to be awarded in payments to farmers in need of assistance.
Civil Service—	
53 July 17	<i>An Act to Amend the Civil Service Act</i> (c. 22, R.S.C. 1927 and amendments), grants increases in the salaries of the Chairman of the Commission and Commissioners; amends former legislation concerning appointments, and the taking and subscribing of the oath of allegiance.
54 July 17	<i>An Act to Amend the Civil Service Superannuation Act</i> (c. 24, R.S.C. 1927 and amendments) provides for retirement of civil servants at the age of 60 years and compulsory retirement at 65 years; defines the areas of active overseas service in World Wars I and II and terms under which veterans are entitled to retirement benefits; eliminates the 10-year period of service before a retiring allowance is paid to a contributor; places on a statutory basis the wartime regulations in respect of temporary employee contributions to the Retirement Fund.
Communications—	
8 Mar. 28	<i>The Mail Contracts Supplemental Payments Act</i> authorizes supplementary payments on rural and land mail contracts.
50 July 17	<i>An Act to Amend the Canadian Broadcasting Act, 1936</i> (c. 24, 1936 and amendments). This amendment grants to the Canadian Broadcasting Corporation the full annual returns from radio licence fees without deducting costs of collection or administration.
External Affairs—	
56 July 17	<i>The Diplomatic Service (Special) Superannuation Act</i> grants payment, out of the Consolidated Revenue Fund, of superannuation benefits for senior appointees of the Department of External Affairs serving outside Canada and to their wives, widows or dependents.
Finance and Taxation—	
1 Mar. 28	<i>The Appropriation Act, No. 1, 1947</i> grants payment, out of the Consolidated Revenue Fund, of \$190,921,733-56 for defraying expenses of the public service during the fiscal year 1947-48, being one-sixth of the amount of the Main Estimates, together with additional sums not exceeding \$1,246,374-91, and \$1,016,666-66, for charges and expenses not otherwise provided for. Authority is also granted for the raising of sums required for the redeeming of loans or obligations.

**Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947—continued**

Chapter and Date of Assent	Synopsis
Finance and Taxation—concl.	
2 Mar. 28	<i>The Appropriation Act, No. 2, 1947</i> grants payment of \$55,839,512-54, out of the Consolidated Revenue Fund, for defraying expenses of the public service, based on further supplementary estimates for the fiscal year 1946-47.
4 Mar. 28	<i>An Act to Amend the Customs Act</i> (c. 42, R.S.C. 1927 and amendments). This amendment increases to 30 days the 14 days allowed to report to a customs collector for refund of duty paid.
11 May 14	<i>The Appropriation Act, No. 3, 1947</i> grants payment, out of the Consolidated Revenue Fund, of \$95,969,200-11 for defraying expenses of the public service during the fiscal year 1947-48, being one-twelfth of the amount of the Main Estimates together with an additional interim sum not exceeding \$5,853,666-66, for charges and expenses not otherwise provided for.
25 June 27	<i>The Appropriation Act, No. 4, 1947</i> grants payment of \$95,299,991-78, out of the Consolidated Revenue Fund, for defraying expenses of the public service for the fiscal year 1947-48, being one-twelfth of the amount of the Main Estimates.
32 June 27	<i>An Act to Amend the Excess Profits Tax Act, 1940</i> (c. 32, 1940 and amendments) provides that a taxpayer, with the exception of taxpayers under Section 9, c. 32, 1940, is not entitled to make application for determination of his standard profits on or after Sept. 1, 1947; no tax will be imposed on profits earned on and after Jan. 1, 1948.
39 June 27	<i>An Act to Amend the Municipal Improvements Assistance Act, 1938</i> (c. 33, 1938). This legislation makes certain amendments respecting the loans to a municipality for the administration of a project when undertaken by another municipality.
58 July 17	<i>The Dominion-Provincial Tax Rental Agreements Act, 1947</i> authorizes the Government of Canada to enter into agreements with the provinces by which, in return for compensation, the Provincial Governments would agree to refrain from levying certain taxes for a period of five years commencing Jan. 1, 1947.
60 July 17	<i>The Excise Tax Act.</i> This Act changes the title of the Special War Revenue Act to Excise Tax Act; makes changes in respect of passenger transportation tickets; excise and bank cheque stamps; imposes a consumption or sales tax on exports of goods produced or manufactured in Canada; reduces the tax on syrups and gasoline.
63 July 17	<i>An Act to Amend the Income War Tax Act</i> (c. 97, R.S.C. 1927 and amendments). This amendment provides for revisions and reductions in personal income tax and corporation taxes, and taxes imposed on residents or non-residents of Canada in respect of dividends from private companies.
77 July 17	<i>The Western Provinces Treasury Bills and Natural Resources Settlement Act.</i> This Act authorizes the refunding and adjustment of the outstanding loans for relief of the four Western Provinces to the Federal Government and final settlement of the claims against the Government of Canada in respect of the administration and control of the natural resources of the Provinces of Alberta and Saskatchewan.
78 July 17	<i>The Appropriation Act, No. 5, 1947</i> grants the sums, out of the Consolidated Revenue Fund, of \$761,256,101-04 (less the amounts already authorized under Appropriation Acts Nos. 1, 3 and 4, 1947) for public service expenses for the fiscal year 1947-48, together with supplementary estimates of \$66,666-68, being the amount set forth in Schedule B to the Act (less the amounts already voted under Appropriation Acts Nos. 1, 3 and 4, 1947) and \$114,939,219-16, being the amount set forth in Schedule C to the Act. Authority is also granted for raising a loan by the issue and sale or pledge of securities of Canada, a sum not exceeding \$200,000,000, for public works and general purposes.
Fisheries—	
61 July 17	<i>An Act to Amend the Fisheries Research Board Act</i> (c. 31, 1937). This amendment gives authority for the appointment of a vice-chairman and an executive director, and for the employment of scientific, technical officers and other employees necessary to the work of the Board.
Immigration—	
19 May 14	<i>An Act to Amend the Immigration Act and to Repeal the Chinese Immigration Act.</i> The amendment permits dependents to enter Canada, subject to medical approval before proceeding to Canada, and repeals the Chinese Immigration Act, c. 95, R.S.C. 1927.

**Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947—continued**

Chapter and Date of Assent	Synopsis
Insurance and Trust Companies—	
27 June 27	<i>An Act to Amend the Canadian and British Insurance Companies Act, 1932, and the Foreign Insurance Act, 1932</i> (c. 46 and 47, 1932 and amendments). The legislation authorizes Canadian and British insurance companies and foreign insurance companies doing business in Canada to invest in securities issued by the International Bank for Reconstruction and Development.
75 July 17	<i>An Act to Amend the Trust Companies Act</i> (c. 29, R.S.C. 1927 and amendments). This amendment makes revisions for the incorporation and organization of trust companies including: the amount of capital stock and shares; investment of trust moneys and company's funds; extension of the period for holding real estate for the protection of investments from seven to twelve years.
International Affairs—	
46 June 27	<i>The United Nations Act, 1947</i> empowers the Governor in Council to take the action necessary to implement decisions under Article 41 of the Charter of the United Nations.
47 June 27	<i>The Visiting Forces (United States of America) Act</i> . The purpose of this legislation is to make provision with respect to the discipline and to the internal administration of visiting Forces from the United States.
69 July 17	<i>The Privileges and Immunities (United Nations) Act</i> provides for privileges and immunities in respect of the United Nations and related international organizations.
Justice—	
13 May 14	<i>An Act to Amend the Canada Evidence Act</i> (c. 59, R.S.C. 1927 and amendments). The legislation amends the modes by which evidence of a treaty to which Canada is a party may be given.
14 May 14	<i>An Act to Amend the Canada Evidence Act (Banks)</i> (c. 59, R.S.C. 1927 and amendments). Under this amendment the books or records of the Bank of Canada and the Industrial Development Bank are made subject to the same provisions that apply to other banks.
31 June 27	<i>An Act to Amend the Criminal Code (Race Meetings)</i> (c. 36, R.S.C. 1927 and amendments). Current amendments are concerned with the holding of race meetings, and the administration and supervision of the pari-mutuel system.
33 June 27	<i>An Act to Amend the Exchequer Court Act</i> (c. 34, R.S.C. 1927 and amendments). The legislation grants a salary not exceeding \$6,500 to the Registrar of the Exchequer Court.
35 June 27	<i>An Act to Amend the Identification of Criminals Act</i> (c. 38, R.S.C. 1927). The amendment provides for the extension of the Act to cover persons charged under the <i>Extradition Act</i> or the <i>Fugitive Offenders Act</i> .
36 June 27	<i>An Act to Amend the Judges Act, 1946</i> (c. 56, 1946). This legislation appoints an Associate Chief Justice to the Superior Court in the Province of Quebec, and provides for an additional judge of the Supreme Court of British Columbia.
37 June 27	<i>An Act to Amend the Juvenile Delinquents Act, 1929</i> (c. 46, 1929 and amendments). The amendment grants special leave by a Supreme Court Judge to appeal from any decision of the Juvenile Court or a magistrate.
41 June 27	<i>An Act to Amend the Penitentiary Act, 1939</i> (c. 6, 1939 and amendments). The amendment authorizes the appointment of one Commissioner and two Deputy Commissioners of Penitentiaries; and other minor administrative amendments.
55 July 17	<i>An Act to Amend the Criminal Code</i> (c. 36, R.S.C. 1927 and amendments). This amendment deals with offences and penalties, appeals and convictions, and fees taken for proceedings. Provision is made for an indeterminate period of imprisonment for habitual criminals.
64 July 17	<i>An Act to Amend the Interpretation Act</i> (c. 1, R.S.C. 1927 and amendments). This legislation extends the Act to make exceptions in Subsection 1 applicable to interpretation sections.

**Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947—continued**

Chapter and Date of Assent	Synopsis
Mines and Resources—	
7 Mar. 28	<i>An Act to Amend the Fertilizers Act</i> (c. 69, R.S.C. 1927 and amendments). Certain amendments are made respecting quality and percentages of different ingredients entering into the production of fertilizer; permits the continuance of control of sale and advertisement of fertilizers.
22 May 14	<i>The National Wild Life Week Act</i> authorizes the week in which Apr. 10 occurs (the birthday of the late Jack Miner) to be known and observed throughout Canada as National Wild Life Week.
57 July 17	<i>The Dominion Coal Board Act, 1947</i> establishes a corporation known as the Dominion Coal Board to exercise certain powers respecting the production, importation, distribution and use of coal in Canada.
62 July 17	<i>An Act respecting the Hudson Bay Mining and Smelting Company, Limited</i> , enacts legislation to declare that the works and undertakings of the Hudson Bay Mining and Smelting Company, Limited, are for the advantage of two or more provinces and provides for employer-employee working-condition agreements to remain under federal authority.
66 July 17	<i>The National Parks Amendment Act, 1947</i> (c. 33, 1930 and amendments). The amendment abolishes Nemiskam and Buffalo Parks and redefines the boundaries of certain other National Parks.
National Defence—	
5 Mar. 28	<i>An Act to Amend the Department of National Defence Act</i> (c. 136, R.S.C. 1927 and amendments). This legislation makes provision for the appointment of one Deputy Minister and not more than three Associate Deputy Ministers of National Defence; and authorizes the establishment of a Defence Research Board.
21 May 14	<i>An Act to Amend the Militia Act</i> (c. 132, R.S.C. 1927). This Act includes certain revisions re the organization of the Canadian Army, enlistments, retirement, exemptions, etc.
49 July 17	<i>The Army Benevolent Fund Act, 1947</i> provides for the establishment of a benevolent fund for Army veterans of the Second World War and authorizes a board of administration to be called "The Army Benevolent Fund Board", consisting of five members appointed by the Governor in Council.
Parliamentary Representation—	
71 July 17	<i>The Representation Act, 1947</i> provides for the readjustment of representation in the House of Commons by increasing the representation from 245 to 255 members as follows: Ontario 83 members; Quebec 73; Nova Scotia 13; New Brunswick 10; Manitoba 16; British Columbia 18; Prince Edward Island 4; Saskatchewan 20; Alberta 17; Yukon Territory and that part of the Northwest Territories lying west of 109th meridian west longitude. The Schedule defines the new electoral districts.
Trade and Commerce—	
17 May 14	<i>The Export and Import Permits Act</i> authorizes that certain commodities be exported and imported only under permit issued by the Minister of Trade and Commerce. Expiration date of the Act is set as the sixtieth day from the First Session of Parliament, 1948.
51 July 17	<i>An Act to Amend the Canadian Commercial Corporation Act</i> (c. 40, 1946). This amendment extends the powers of the Corporation.
Transportation—	
12 May 14	<i>An Act respecting the appointment of Auditors for National Railways</i> authorizes, for 1947, the appointment of independent auditors to make a continuous audit of the accounts of the National Railways.
28 June 17	<i>An Act to Amend the Canadian National-Canadian Pacific Act, 1933</i> (c. 33, 1932-33 and amendments). This amendment authorizes employer-employee agreements, rates of pay, hours of work and other conditions of employees of the railways, if agreements are filed with the Minister of Transport.
29 June 17	<i>Canadian National Railways Financing and Guarantee Act, 1947</i> authorizes the provision of moneys to meet capital expenditures made and capital indebtedness incurred by the Canadian National Railways during 1947 and to authorize the guarantee by the Government of certain securities to be issued by the Canadian National Railways.

**Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947—continued**

Chapter and Date of Assent	Synopsis
Transportation— concl.	
30 June 27	<i>Canadian National Railways Refunding Act, 1947.</i> The Act provides for the refunding of matured, maturing and callable financial obligations of the Canadian National Railway Company and for the issue of substituted securities in respect of such refunding to an amount not exceeding \$200,000,000.
42 June 27	<i>The Port Alberni Harbour Commissioners Act.</i> This Act provides for the incorporation of the Port Alberni Harbour Corporation to have jurisdiction within the harbour limits.
52 July 17	<i>The Canadian Maritime Commission Act</i> gives authority for the establishment of a Canadian Maritime Commission consisting of three members to consider and recommend from time to time such policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs.
70 July 17	<i>An Act to Amend the Railway Act</i> (c. 170, R.S.C. 1927 and amendments). The amendment provides for increases in salaries of its Commissioners and makes an annual grant of \$200,000 from the Consolidated Revenue Fund for ten consecutive years from April, 1947, towards the actual construction of railway grade crossings.
74 July 17	<i>An Act to Extend the Term of Office of a Transport Commissioner</i> permits a Transport Commissioner who has reached the age of 75 years to continue to hold office for not more than one year after June 30, 1947.
Veterans Affairs and Pensions—	
9 Mar. 28	<i>An Act to Amend the Militia Pension Act</i> (c. 133, R.S.C. 1927 and amendments). The amendment provides that, for the purpose of this Act, a man promoted to the rank of acting warrant officer subsequent to Sept. 10, 1939, but prior to Jan. 1, 1947, is not deemed to be an officer.
65 July 17	<i>An Act to Amend the Militia Pension Act (Disablement Pension)</i> (c. 133, R.S.C. 1927 and amendments). This legislation makes provision for medical examination of disabled members of the forces, not already covered by the existing legislation, to qualify them for pension.
76 July 17	<i>An Act to Amend the Veterans Business and Professional Loans Act</i> (c. 69, 1946). The amendment provides for guaranteed loans with respect to partnership business.
Miscellaneous—	
6 Mar. 28	<i>An Act to Amend the Feeding Stuffs Act, 1937</i> (c. 30, 1937 and amendments). The amendment provides authority for establishing regulations that only feeding stuffs of the kind or composition as specified by such regulations shall be eligible for registration.
16 May 14	<i>The Continuation of Transitional Measures Act, 1947</i> provides for the continuation of certain orders and regulations in force under the War Measures Act and the National Emergency Transitional Powers Act, 1945. The expiration date of the Act is to be Mar. 31, 1948, or the sixtieth day after Parliament meets during 1948, unless extension is asked for a further period which shall not in any case exceed one year from the time it would otherwise have expired.
18 May 14	<i>The Government Employees Compensation Act, 1947.</i> This Act grants compensation payable out of unappropriated moneys of the Consolidated Revenue Fund to government employees for disease, disability or death arising out of their employment. This Act does not apply to any member of the Armed Forces or of the Royal Canadian Mounted Police.
20 May 14	<i>An Act to Amend the Inspection and Sale Act, 1938</i> (c. 32, 1938). This Act provides for the establishment of regulations respecting the inspection and grading of fibre flax.
23 May 14	<i>The Patent Act Amendment Act, 1947.</i> This amendment makes important changes in the original Patent Act, 1935, regarding: Government-owned patents; patents relating to atomic energy; extension of time for filing or prosecution of applications for patents; and tariff of patent fees.
24 May 14	<i>The Trading with the Enemy (Transitional Powers) Act.</i> This Act provides for the continuance of the revised regulations respecting trading with the enemy and the disposition of enemy property.

**Legislation of the Third Session of the Twentieth Parliament,
Jan. 30, 1947 to July 17, 1947—concluded**

Chapter and Date of Assent	Synopsis
Miscellaneous— concl.	
26 June 27	<i>An Act respecting the Beauharnois Light, Heat and Power Company</i> (c. 19, 1931 and amendments) grants to that Company, its successors or assigns, certain water diversion rights between Lake Francis, the connecting Lake St. Louis and the River St. Lawrence.
38 June 27	<i>An Act to Amend the Merchant Seamen Compensation Act</i> (c. 58, 1946). This amendment revokes regulations established by P.C. 4755 July 17, 1945, and, as of Aug. 31, 1946, Section 19 of the Interpretation Act is substituted for these Regulations.
40 June 27	<i>An Act to Amend the National Housing Act, 1944</i> (c. 46, 1944-45 and amendments). The amendment concerns certain matters, including terms of contracts, loans on first mortgage and corporation agreements, etc.
44 June 27	<i>An Act to Amend the Publication of Statutes Act</i> (c. 2, R.S.C. 1927). The amendment removes from the original legislation provisions respecting disallowance of bills in relation to Dominion legislation.
48 June 27	<i>An Act to Amend the War Charities Act, 1939</i> (c. 10, 1939 and amendments). This amendment confines provisions of the Act to apply only to funds registered prior to the coming into force of this Act.
59 July 17	<i>The Eastern Rocky Mountain Forest Conservation Act</i> authorizes legislation for the protection of the forests and conservation of the watersheds on the eastern slope of the Rocky Mountains to be administered by the Eastern Rockies Forest Conservation Board, two members of which are to be appointed by the Governor in Council and one by the Lieutenant-Governor of Alberta in Council.
67 July 17	<i>An Act to Amend the Old Age Pensions Act</i> (c. 156, R.S.C. 1927 and amendments). This amendment permits an increase in the maximum old age pension, with liberalization of means and residence tests, and reduction to 21 years of the age at which a blind person is eligible for pension.
68 July 17	<i>An Act to Amend the Prisons and Reformatories Act</i> (c. 163, R.S.C. 1927 and amendments). The amendment provides that the Nova Scotia School for Boys be included as a reformatory institution.
72 July 17	<i>The Royal Style and Titles Act (Canada), 1947</i> gives assent to the omission of the words "India Imperator" and "Emperor of India" from His Majesty's Royal Style and Titles, the date on which the omission becomes effective to be published in the <i>Canada Gazette</i> .
73 July 17	<i>An Act to Amend the Senate and House of Commons Act</i> (c. 147, R.S.C. 1927 and amendments). This amendment provides for additional annual expense allowances to the Leader of the Government, and to the Leader of the Opposition, in the Senate.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948**

Chapter and Date of Assent	Synopsis
11-12 Geo. VI	
Agriculture—	
1 Mar. 24	<i>An Act to Amend the Agricultural Products Act</i> (c. 10, 1947) by repealing Section 11 and placing the expiration date of the Act at Mar. 31, 1949.
4 Mar. 24	<i>An Act to Amend the Canadian Wheat Board Act, 1935</i> , provides that the Board, with the approval of the Governor in Council, may establish and contribute to a pension fund for the members, officers, clerks, employees and their dependents; also extends Parts I and IV of the said Act applicable to oats and barley.
9 Mar. 24	<i>An Act to Amend the Farm Improvement Loans Act, 1944</i> , limits the liability of the Government to a bank as to losses sustained under farm improvement loans during the period Mar. 1, 1945, to Feb. 28, 1951, and gives the form of security allowed a bank for payment and interest on such loans in certain cases.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948—continued**

Chapter and Date of Assent	Synopsis
Agriculture—	
concl. 24 May 14	<i>An Act to Amend the Prairie Farm Assistance Act, 1939</i> , defines the meaning of township in the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia and the number of acres for which an award may be made; deduction of one per centum levy to be recorded by mill licensees on cash tickets or other form of settlement issued to the vendor of grain.
25 May 14	<i>An Act to Amend the Prairie Farm Rehabilitation Act</i> provides for the appointment of a Director and an Associate Deputy of Rehabilitation, officers and employees.
32 June 30	<i>An Act to Amend the Agricultural Prices Support Act, 1944</i> . Section 9 of the Act dealing with the powers of the Agricultural Prices Support Board shall continue in force for such further period as the Governor in Council may fix by proclamation.
61 June 30	<i>The Maritime Marshland Limitation Act</i> empowers the Minister of Agriculture to reclaim and develop marshlands in Nova Scotia, New Brunswick and Prince Edward Island.
Constitution and Government—	
46 June 30	<i>An Act to Amend the Dominion Elections Act, 1938</i> , amends the franchise qualifications of electors and makes minor amendments in the preparation of lists of enumerators and electors. Provision is made for voting by Defence Service electors and veteran electors at a general election; also for the superseding and withdrawal of writs for by-elections ordered to be held after the dissolution of Parliament.
67 June 30	<i>An Act respecting the Revised Statutes of Canada</i> establishes a Statute Revision Commission to examine, revise, classify and consolidate the statutes of Canada.
75 June 30	<i>An Act to Amend the Yukon Act</i> increases the sessional indemnity of the Councillors and makes other amendments.
Finance and Taxation—	
2 Mar. 24	<i>The Appropriation Act, No. 1, 1947-48</i> grants payment, out of the Consolidated Revenue Fund, of a sum not exceeding \$179,134,768-68 for defraying expenses of the public service during the fiscal year 1948-49 not otherwise provided for, being one-sixth of the amount of each of the items to be voted in the Main Estimates; also \$2,965,800-33 for items in Schedule A and \$1,462,158-50 for items in Schedule B and \$2,037,567-83 for items to be voted for as set forth in Schedule C.
3 Mar. 24	<i>The Appropriation Act, No. 2, 1947-48</i> grants payment out of the Consolidated Revenue Fund of \$79,809,337-98 towards defraying expenses of the public service as set forth in the Schedule to this Act.
7 Mar. 24	<i>An Act to Amend the Emergency Exchange Conservation Act</i> authorizes importation of certain goods described in Schedules I, II and III only in accordance with a permit issued by the Minister of Finance and, subject to this Act and the regulations, the Minister may issue, vary or revoke permits for the import of such goods.
12 May 14	<i>The Appropriation Act, No. 3, 1947-48</i> grants the sum not exceeding \$89,567,384-33 to be paid out of the Consolidated Revenue Fund to defray expenses of the public service not otherwise provided for and being one-twelfth of the amount of each of the items set forth in the Main Estimates with an additional \$17,982,745-67 being one-sixth of the amount granted for items of the Schedule to this Act.
22 May 14	<i>An Act to provide for the winding-up of the Penny Bank of Ontario and the repeal of the Penny Bank Act</i> . The Penny Bank Act shall be repealed on and from a day to be fixed by proclamation published in the <i>Canada Gazette</i> .
23 May 14	<i>An Act to Amend the Pension Act</i> makes numerous minor amendments including: new provisions for widow's entitlement; certain pensions not payable in respect of children born after May 1, 1948; and extra allowances for total disability where requiring attendance according to A and B Schedules of this Act.
34 June 30	<i>The Canada-New Zealand Income Tax Agreement Act, 1948</i> , provides for an agreement between the Government of Canada and the Government of New Zealand for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948—continued**

Chapter and Date of Assent	Synopsis
Finance and Taxation—concl.	
43 June 30	<i>An Act to Amend the Department of National Defence Act</i> concerns the transfer of moneys contributed, and pay and allowances assigned, to the C.O.T.C. that previously belonged to Canada. They now cease to belong to Canada and may be transferred by order of the Governor in Council to a trust or to such persons as may be designated.
47 June 30	<i>An Act to Amend the Dominion Succession Duty Act</i> removes the limit whereby bequests to non-profit charitable organizations in Canada were exempt only up to 50 p.c. of the aggregate net value of an estate, and exempts from duty all successions derived from an estate of an aggregate net value not exceeding \$50,000.
48 June 30	<i>An Act to Amend the Emergency Exchange Conservation Act</i> amends Schedule 1 of c. 7, 1947-48.
49 June 30	<i>An Act to Amend the Excise Act, 1934</i> , repeals Part IV of the Act of 1934 regarding malting and malt houses and makes other minor amendments.
50 June 30	<i>An Act to Amend the Excise Tax Act</i> repeals Part II of the Act dealing with trust and loan company income. The 50 p.c. tax on certain articles and Schedule 5 is repealed. Parts XV and XVI concerning tax on places of amusement and entertainment are also repealed.
51 June 30	<i>An Act to Amend the Foreign Exchange Control Act.</i> Foreign currency is to be bought and sold only through authorized dealers and residents are required to sell all foreign currencies.
52 June 30	<i>The Income Tax Act.</i> This new legislation covers broadly all matters relating to income tax for individuals and corporations.
53 June 30	<i>An Act to Amend the Income War Tax Act</i> provides for an exemption of \$500 for taxpayers who have attained the age of sixty-five. Provision is made for payment of interest to the taxpayer in respect of overpayment of tax. Schedule V, concerning the Income Tax Advisory Board, is repealed. Deductions may be made for expenditures incurred in certain phases of mining, oil drilling and refining as in previous years.
65 June 30	<i>An Act to Amend the Quebec Savings Banks Act</i> makes further regulations regarding loans which may be made without collateral security and on first mortgage.
68 June 30	<i>An Act to Amend the Salaries Act</i> fixes the salaries of the Lieutenant-Governors of the provinces.
70 June 30	<i>An Act to Amend the Tariff Board Act</i> makes changes in the tenure of office, appointments and salaries.
78 June 30	<i>The Appropriation Act, No. 4, 1947-48</i> , grants payment, out of the Consolidated Revenue Fund, of the sums of \$781,658,186-63, \$197,067,420-89, \$10,100,000, set forth in Schedules A, B and C, and authorizes the raising of a loan of \$200,000,000-00 for public works and general purposes.
Insurance and Loan Companies—	
36 June 30	<i>An Act to Amend the Canadian and British Insurance Companies Act, 1932, and the Foreign Insurance Companies Act, 1932</i> , provides for investments on loans, by such companies, in real estate or leaseholds in Canada or elsewhere not previously authorized by this Section but subject to certain provisions, exceptions and limitations.
57 June 30	<i>An Act to Amend the Loan Companies Act</i> repeals Part III of the Loan Companies Act of 1934 and makes other amendments.
International Affairs—	
71 June 30	<i>The Treaties of Peace (Italy, Roumania, Hungary and Finland) Act, 1948</i> , provides for carrying into effect the treaties signed by Canada and the countries mentioned in the title.
Justice—	
26 May 14	<i>An Act to Amend the Prisons and Reformatories Act</i> makes provision for the appointment by the Lieutenant-Governor of British Columbia of a Board of Parole and for the imprisonment in New Haven, instead of the common gaol, of any male between 16 and 21 years of age sentenced for a term of not less than 3 months or not more than 2 years less one day.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948—continued**

Chapter and Date of Assent	Synopsis
Justice—concl.	
28 May 14	<i>An Act to Amend the Royal Canadian Mounted Police Act</i> by addition of Parts V, VI and VII concerning pensions, allowances and gratuities and contributions to the Consolidated Revenue Fund.
33 June 30	<i>An Act to Amend the Canada Evidence Act</i> makes provision whereby the wife or husband of a person charged with aiding or abetting juvenile delinquency shall be a competent and compellable witness for the prosecution without the consent of the person charged.
39 June 30	<i>An Act to Amend the Criminal Code</i> repeals Part XVII dealing with trial of juvenile offenders for indictable offences; provides for conspiracy to publish defamatory libel; establishes procedure in case of illness of a juror; makes changes in penalties; adds a Section (769A) on appeals to Court of Appeal; and provides for the admission in certain indictable offences of evidence as to whether the offender is a criminal sexual psychopath.
40 June 30	<i>An Act to Amend the Criminal Code (Race Meetings)</i> deletes the amount staked and the percentage deducted under the pari-mutuel system from c. 36, R.S.C. 1927 and substitutes other percentages.
55 June 30	<i>An Act to Amend the Judges Act, 1946</i> , repeals the provision for the salary of the judge of the Court of Divorce and Matrimonial Causes of the Supreme Court of Nova Scotia.
56 June 30	<i>An Act to Amend the Land Titles Act</i> defines how much land may be contained in an application for registration and in a certificate of title.
66 June 30	<i>An Act to Amend the Railway Act, the Exchequer Court Act and the Judges Act, 1946</i> , reconstitutes the composition of the Exchequer Court and further defines the jurisdiction of the Chief Commissioner of the Board of Railway Commissioners.
Labour—	
29 May 14	<i>An Act to Amend the Unemployment Insurance Act, 1940</i> , makes numerous changes in regulations regarding certificate exemptions, rates of contributions and benefits; disqualification for benefits; and legal proceedings for misrepresentation or non-compliance with the Act.
30 May 14	<i>An Act to Amend the Vocational Training Co-ordination Act, 1942</i> , authorizes the Minister to undertake projects to provide vocational training to fit unemployed persons for gainful employment.
54 June 30	<i>The Industrial Relations and Disputes Investigation Act</i> repeals the Industrial Disputes Investigation Act, 1927, enacts legislation regarding unfair labour practices, collective bargaining and agreements, strikes and lockouts, and outlines conciliation methods and procedures.
Mines and Resources—	
14 May 14	<i>An Act to Amend the Dominion Water Power Act</i> revises the powers of the Governor in Council.
15 May 14	<i>The Emergency Gold Mining Assistance Act</i> authorizes the Minister of Mines and Resources to make, under certain prescribed conditions, assistance payments to persons or corporations operating gold mines.
18 May 14	<i>An Act to Amend the National Parks Act</i> revises the descriptions of the National Parks.
60 June 30	<i>The Manitoba Natural Resources Transfer (Amendment) Act, 1948</i> , confirms the Agreement between the Government of Canada and the Government of Manitoba set out in the accompanying Schedule.
64 June 30	<i>The Northwest Territories Power Commission Act</i> establishes the Northwest Power Commission, defines its powers and arranges for financing the Commission.
69 June 30	<i>The Saskatchewan Natural Resources Act No. 4</i> confirms the Agreement set out in the attached Schedule.
76 June 30	<i>An Act to Amend the Yukon Placer Mining Act</i> provides for the more efficient tagging of claims and makes other minor amendments.
77 June 30	<i>An Act to Amend the Yukon Quartz Mining Act</i> makes amendments regarding filing, staking, grouping, tagging, etc., of claims.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948—continued**

Chapter and Date of Assent	Synopsis
Trade and Commerce—	
6 Mar. 24	<i>An Act to Amend the Customs Tariff</i> by the striking out of tariff items 28 and 28a of c. 24, R.S.C. 1927; the enumeration of goods, rates of duties of customs of these items; and the insertion of the items, enumerations and rates of duty specified in the Schedule to this Act.
8 Mar. 24	<i>An Act to Amend the Excise Tax Act</i> revises certain sections of Schedules I, II and III of the Excise Tax Act, c. 179, R.S.C. 1927.
16 May 14	<i>An Act to Amend the Export and Import Permits Act</i> provides for the publication in the <i>Canada Gazette</i> of a list of countries to which goods, except under permit, may not be exported.
17 May 14	<i>An Act to Amend the Export Credits Insurance Act</i> provides that, where a contract of insurance will impose upon the Export Credits Insurance Corporation a liability in excess of that normally undertaken, such contract may be approved and authorized by the Governor in Council to be paid to the Corporation out of unappropriated moneys in the Consolidated Revenue Fund.
41 June 30	<i>An Act to Amend the Customs Act</i> provides for revision of the valuation of duty, and how the rate and amount of duty should be ascertained.
42 June 30	<i>An Act to Amend the Customs Tariff</i> revises the list of British countries to which preferential tariff applies and gives a Schedule of goods with rates of duties of customs.
Transportation—	
10 Mar. 24	<i>The New Westminster Harbour Commissioners Refunding Act, 1948</i> , provides for the refunding of maturing financial obligations of the New Westminster Harbour Corporation.
13 May 14	<i>An Act respecting the appointment of Auditors for National Railways</i> authorizes the appointment of independent auditors for 1948 to make a continuous audit of the National Railways accounts.
19 May 14	<i>An Act to Amend the North Fraser Harbour Commissioners Act</i> revises the manner in which the Commissioners are to be appointed and gives the Corporation power to administer dock property and water lots for Richmond, Burnaby and Vancouver.
27 May 14	<i>An Act to Amend the Railway Act</i> repeals legislation of c. 70, July 17, 1947 (see p. 1237), and makes an annual grant of \$500,000 for nine consecutive years from Apr. 1, 1948, to be set aside from the Consolidated Revenue Fund for public highway crossings.
35 June 30	<i>An Act to Amend the Canada Shipping Act, 1934</i> , introduces new legislation concerning fatal accidents with regard to liabilities for damages and benefits to dependents. Numerous revisions have been made in the requirements for service certificates; appointments of masters and seamen; discharges; desertions; ship inspections; etc. As Schedule 14, following the amended legislation, the Conventions of the International Labour Convention concerning Medical Examination of Seafarers, certification of able seamen, food and catering for crews on board ship and the certification of ship's cooks are given.
37 June 30	<i>Canadian National Railway Financing and Guarantee Act, 1948</i> , authorizes the provision of money to meet certain capital expenditures and capital indebtedness incurred by the System during 1948 and to authorize the guarantee of certain securities to be issued by the Canadian National Railway Company.
Veterans Affairs—	
31 May 14	<i>An Act to Amend the War Service Grants Act, 1944</i> , authorizes the abolition of the Board of Review when the Minister is satisfied that the duties and functions of the Board can be transferred to a Committee of at least three officers of the Department of Veterans Affairs.
38 June 30	<i>An Act to Amend the Civilian War Pensions and Allowances Act</i> repeals the clause concerning the pension at death being applied for within one year from the date of death on the coming into force of this Act to applicants regarding civilian members of overseas air crews, Canadian merchant seamen and salt-water fishermen.

**Legislation of the Fourth Session of the Twentieth Parliament,
Dec. 5, 1947 to June 30, 1948—concluded**

Chapter and Date of Assent	Synopsis
Veterans Affairs—concl.	
72 June 30	<i>An Act to Amend the Veterans Insurance Act</i> empowers the Minister to enter into a contract of insurance with veterans and dependents not hitherto provided for.
73 June 30	<i>An Act to Amend the Veterans Rehabilitation Act</i> extends the period in certain circumstances under which allowances may be paid by the Minister to those veterans applying for educational rehabilitation. The proviso that the Minister should not pay to any university more than \$500 per annum for a veteran is rescinded.
74 June 30	<i>An Act to Amend the War Veterans' Allowance Act, 1946</i> , extends the definition of veteran and amends the allowances payable in certain cases.
Miscellaneous—	
5 Mar. 24	<i>An Act to Amend the Continuation of Transitional Measures Act, 1947</i> , sets forth the duration of the Act, provided a continuation is not at that time asked, for a period not exceeding one year.
11 May 14	<i>An Act to Amend the Animal Contagious Diseases Act</i> provides penalties for conspiracy with any person violating the provisions of this Act.
20 May 14	<i>An Act to Amend the Northwest Territories Act</i> authorizes the preservation of game in the Territories. Legislation is introduced concerning appeals from a decision of a Stipendiary Magistrate to the Appellate Division of the Supreme Court of Alberta.
21 May 14	<i>The Pelagic Sealing (Provisional Agreement) Act</i> enacts legislation respecting the Provisional Fur Seal Agreement between Canada and the United States of America.
44 June 30	<i>An Act to Amend the Diplomatic Service (Special) Superannuation Act</i> authorizes the Governor in Council to grant to a retiring public official a withdrawal allowance equal to the total amount of his contributions under the Civil Service Superannuation Act where a pension is not authorized, and computes the amount of contribution in respect of prior service.
45 June 30	<i>The Statistics Act</i> defines the duties of the Dominion Statistician; authorizes the collection of statistics of population, agriculture, industry, construction, trading and service establishments, transportation, etc.; and repeals the Statistics Act of 1918.
58 June 30	<i>An Act to Amend the Lord's Day Act</i> repeals the application to Ontario of the Abuses and Profanations of the Lord's Day Act of Great Britain (1781) and repeals the Act to Prevent Profanation of the Lord's Day, 1859 (Upper Canada).
59 June 30	<i>An Act to Amend the Mail Contracts Supplemental Payments Act</i> establishes Mar. 31, 1949, as the date for expiration of payments made under the Act of 1947.
62 June 30	<i>An Act to Amend an Act respecting the National Battlefields at Quebec</i> empowers the Minister of Finance to make payments of \$100,000 per year for 10 years to acquire historic sites.
63 June 30	<i>An Act to Amend the National Housing Act, 1944</i> . This Act guarantees to builders entering into contract with the Central Mortgage and Housing Corporation rentals from the housing projects for a 30-year period and empowers approved lending institutions to advance up to 85 p.c. of the cost of rental housing projects guaranteed by the Corporation. It also restricts the powers of the Corporation and transfers the property of Wartime Housing Limited to the Corporation.

APPENDIX I

Chronology

(In continuance of the Chronology at pp. 72-77 of this volume.)

1948. June 28, Provincial general elections were held in New Brunswick; Liberal Government of Hon. J. B. McNair returned to power. June 29, Prince Edward Island voted in favour of Government-controlled Temperance Act. June 30, Rt. Hon. J. L. Ilsley resigned as Minister of Justice. The Fourth Session of the Twentieth Parliament prorogued. July 15, Canada gave full support to a United Nations Security Council order to the Jews and Arabs to cease fighting in Palestine. July 16, The New York State Power Authority announced that it and the Ontario Hydro-Electric Power Commission had filed plans for a joint development of a 2,200,000 h.p. hydro-electric project on the St. Lawrence River near Massena, N.Y. July 19, The United Nations Economic and Social Council, with representatives from 18 countries, held its seventh session in Geneva. L. D. Wilgress, Canadian Minister to Switzerland, was the delegate for Canada. July 22, Referendum held in Newfoundland resulted in a majority vote cast in favour of Confederation with Canada. July 28, Provincial general elections were held in Quebec; National Union Party Government of Hon. Maurice L. Duplessis returned to power. Aug. 5, Rt. Hon. W. L. Mackenzie King resigned as Leader of the Liberal Party, ending 29 years of leadership. Aug. 7, Rt. Hon. L. S. St. Laurent, Secretary of State for External Affairs, was chosen by the National Liberal Convention at Ottawa to succeed Rt. Hon. W. L. Mackenzie King as Leader of the Liberal Party. Aug. 17, Alberta provincial general elections held. Social Credit Government of Hon. Ernest C. Manning returned to power. Sept. 1, The Federal Labour Code, establishing machinery for collective bargaining and settlement of industrial disputes, became effective. Sept. 10, Appointment of Rt. Hon. L. S. St. Laurent as Minister of Justice. Sept. 17, Count Folke Bernadotte, United Nations Palestine mediator, assassinated in Jerusalem. Dr. Ralph Bunche appointed acting mediator. Sept. 21-Dec. 11, The third session of the General Assembly of the United Nations was held in Paris. The Canadian delegation included Rt. Hon. W. L. Mackenzie King (who gave farewell address Sept. 28), Hon. Lester B. Pearson, Hon. Lionel Chevrier, Gen. the Hon. A. G. L. McNaughton, Maj.-Gen. George P. Vanier and Hon. Wishart McL. Robertson. Sept. 30, John Bracken tendered his resignation as national Leader of the Progressive Conservative Party in Canada. Oct. 2, George A. Drew, K.C., was elected as Leader of the Progressive Conservative Party. Oct. 6-27, Representatives of Canada

and Newfoundland met at Ottawa to discuss final arrangements for Newfoundland's entry into Confederation as the tenth Province of Canada. Oct. 11-22, Meeting of Commonwealth Prime Ministers in London to discuss questions of common interest. Owing to indisposition of Prime Minister Mackenzie King, the Canadian High Commissioner and later the Minister of Justice, Rt. Hon. L. S. St. Laurent, represented Canada. Oct. 19, Hon. Thomas L. Kennedy, Minister of Agriculture in the Ontario Government, was appointed Premier of Ontario after the formal resignation of Hon. George A. Drew. Oct. 20, United Nations General Assembly at Paris approved Canadian-sponsored plan for atomic energy control. Nov. 5, Hon. Stuart S. Garson, K.C., resigned as Premier of Manitoba in anticipation of his entry into the Federal Cabinet. Nov. 11, The Minister of Justice announced that representatives of Canada had joined in discussions on North Atlantic Regional Security Pact. Nov. 13, Hon. Douglas L. Campbell, Minister of Agriculture for the Province of Manitoba, was sworn in as Premier of Manitoba. Nov. 14, A son (Prince Charles Philip Arthur George) born to Their Royal Highnesses, Princess Elizabeth and Prince Philip. Nov. 15, Governor General Viscount Alexander accepted the resignation of retiring Prime Minister W. L. Mackenzie King. Rt. Hon. Louis Stephen St. Laurent took the oath as President of the Privy Council and became Prime Minister of Canada. Dec. 10, The United Nations adopted the first world Declaration of Human Rights proclaiming freedom and equality for everyone. Dec. 11, Representatives of Canada and Newfoundland signed the agreement under which Newfoundland, after approval by the Parliament of Canada and the Government of Newfoundland and confirmation by the Parliament of the United Kingdom, will enter Confederation as the tenth Province of Canada on Mar. 31, 1949, the Prime Minister the Rt. Hon. L. S. St. Laurent and Hon. Brooke Claxton, Acting Secretary of State for External Affairs, signed on behalf of Canada. Dec. 14, Supreme Court declared manufacture and sale of oleomargarine and other butter substitutes in Canada legal; import ban remained. Dec. 21, Ireland officially became an independent republic. Dec. 24, The Canadian Government informed the Provisional Government of Israel that the Canadian Government recognized *de facto* the State of Israel in Palestine and that it also recognized *de facto* the authority of the Provisional Government of Israel.

APPENDIX II

Foreign Trade of Canada, 1947-48

Chapter XXI of this volume includes foreign trade figures for the calendar year 1947. However, at the time of going to press, it is possible to give monthly figures up to the end of 1948; these are shown in the following table together with monthly data for 1947 which are given for purposes of comparison.

It will be noted that domestic exports have shown a decided increase in each of the first five months of 1948 as compared with the same months of 1947. Imports showed an increase in each month over the previous year except in March, May, July and October.

1.—Trade of Canada (Excluding Gold) by Months, 1947 and 1948

NOTE.—Figures for the calendar years 1940-43 are given at p. 1059 of the 1943-44 Year Book; 1944 figures at p. 1163 of the 1945 Year Book; 1945 figures at p. 1200 of the 1946 edition; and 1946 figures at p. 1214 of the 1947 edition.

Month	Imports		Domestic Exports		Total Trade	
	1947	1948	1947	1948	1947	1948
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
January.....	173,782	206,077	208,639	235,384	384,267	445,137
